# Safety instructions for using ultra hard cutting tools

## 1. Instructions for using ultra hard cutting tools

As required by the laws concerning Product Liability enforced on July 1, 1996, we place warning or caution labels on the packages of applicable NTK products. However, each tool body itself bears no detailed safety instructions. Therefore, you are requested to read and understand fully the "Safety instructions for the use of carbide cutting tools" before putting any ultra hard tool materials into use. In addition, we request all relevant staff and operators fully understand these safety instructions prior to use.

## 2. Basic characteristics of ultra hard tool materials

### 2-1. Meaning and classifications of terms used in this leaflet

Ultra hard tool materials: The collective name for materials used as cutting tools, including carbides, ceramics, CBN and diamond (PCD) sintered materials.

Carbide: Tool materials where the main component is WC (Tungsten Carbide)

Ultra hard materials: The collective name for materials used as ultra hard tools. Also used as a convenient way of referring to carbides under a narrower definition.

Ultra hard tools: The collective name for tools using ultra hard tool materials.

### 2-2. Physical properties

Appearance: Varies depending on the material. Example: gray, black or gold

Odour: No odour

Hardness: Cemented carbide: HV500 up to 3,000 kg/mm<sup>2</sup>

Specific gravity: Carbide: 9 up to 19

### 2-3. Constituents

Carbide, nitride, carbo-nitride, or oxidized materials of W, Ti, Al, Ta, B or the like; some contain metallic components such as Co, Ni, Cr and/or Mo.

## 3. Precautions for handling ultra hard tool materials

- \* One of the properties specific to these materials is high hardness, another is brittleness. Therefore, shock loads or impacts, or excessive clamping of these materials may result in breakage or other damage.
- \* As the specific gravity (density) of these materials is very high, a large component made up of these materials or such products in large quantity should be handled with care.
- \* Ultra hard materials are different in their thermal expansion ratio from metals. These products are prone to thermal shock and subsequent breakage when subjected to sudden increase or decrease in temperature.
- \* As cutting oil, lubricant and general moisture may corrode ultra hard materials and affect their strength, pay extra attention to storing them in good conditions.

## 4. Precautions for processing ultra hard tools

- \* The strength of ultra hard tools may be significantly lowered depending on the surface condition. Always use diamond grinding wheels for finish machining.
- \* Dust is produced when ultra hard tools are ground. Install appropriate ventilation/disposal equipment and wear protective gear such as masks, as inhalation of such dust may be hazardous to health. If such dust contacts your skin or comes into contact with your eyes, flush well with flowing water.
- \* After the grinding of ultra hard tools or brazed tools, the waste coolant contains components of heavy metals. Be sure to dispose of such waste liquid properly.
- \* After re-grinding ultra hard tools, check that they are free of cracks or damage before use.
- \* When ultra hard material or products made of ultra hard material is marked with lasers or an electric pen, cracking may occur to the marked area. Do not mark in areas where stress is applied during use.
- \* Processing ultra hard material by electric discharge may cause residual cracks on the surface, resulting in lower strength. Thus, remove any cracks completely by grinding as required.
- \* Be careful when brazing ultra hard material. If the temperature is lower or higher than the melting point of the brazing material, the insert may not be permanently fixed.

## Precautions for Safe Use of Cutting Tools

| Applicable Products                              | Possible Risks  | Safety Measures   |
|--|---|---|
| General Cutting Tools                            | ◎Contact with a sharp cutting edge with bare hands may result in injury.  | *Use protective gear such as protective gloves when taking the tool out of packaging and installing into the machine.   |
|  | ◎Misuse or using under inappropriate conditions may cause the cutting tool to break and/or shatter into pieces, resulting in personal injury.   | *Use protective equipment, machine guarding and/or protective glasses.<br>*Use within the range of recommended conditions. Please refer to the instruction manual and catalogue.  |
|  | ◎Sudden increase in cutting resistance due to sudden impact load or excessive wear may cause the cutting tool to break and/or shatter into pieces, resulting in personal injury.                            | *Use protective gear such as protective gloves when taking the tool out of packaging and installing into the machine.   |
|  | ◎High-temperature chips may be produced and long chips may be ejected, resulting in injury and/or burns.  | *Use protective equipment, machine guarding and/or protective glasses.<br>*Before removing chips, always stop the machine. Wear protective gloves and use proper equipment for chip removal.  |
|  | ◎The tool and material/work being cut can become very hot. Touching them immediately after use may cause burns.   | *Use protective gear such as protective gloves.   |
|  | ◎Sparks, heat generation due to breakage and/or chips during cutting may cause fire.  | *Do not use the machine and tools in locations where there are risks of ignition or explosion.<br>*When using water-insoluble cutting oil, fire prevention measures must be implemented.  |
|  | ◎Out of balance machine set ups when used at a high-speed, may cause insert breakage due to excess vibration or chatter, resulting in injury.   | *Use protective equipment, machine guarding and/or protective glasses.<br>*Perform a trial-run beforehand to make sure the setup is stable, free of chatter, vibration and abnormal noise.  |
|  | ◎Touching burrs and flashes on machined work may result in personal injury.   | *Use adequate hand protection.  |
| Throw-Away Type Tools<br>(With indexable insert) | ◎Inappropriately clamped inserts and/or components may become detached from the machine during cutting, resulting in injury.  | *Before installing the insert, clean the seating surface and clamping components so that they are free of debris.<br>*Use the wrench supplied to install the insert and check that the insert and components are securely clamped. Do not use any inserts or components other than the items specified. |
|  | ◎Excessively tightening with a device such as a pipe extension may cause the insert and/or components to break or detach due to over clamping.  | *Do not use tightening devices such as pipe extensions to obtain further torque. Always use the supplied wrench.  |
|  | ◎At a high speeds inserts and/or components may lose clamping pressure due to the loosening effect of centrifugal force. This is very dangerous. Always ensure secure clamping systems and check regularly. | *Use within the range the recommended conditions. Please refer to the instruction manual and catalogue.   |
| Cutters and Rotational Tools                     | ◎As cutters have sharp cutting edges, contact with bare hands may result in injury.   | *Use protective equipment such as protective gloves.  |
|  | ◎Imbalance or eccentric rotation may cause the tool to break due to vibration or chatter, resulting in potential injury.  | *Use at a rotational speed within the recommended conditions.<br>*To prevent eccentric rotation and vibration due to worn bearings, regularly check the machine rotor/rotating parts for the accuracy and balance and adjust as required.   |
| Drills   | ◎Extra care should be taken when through hole drilling as chips may be ejected at high speed as the drill breaks through the workpiece.   | *Use protective equipment such as machine guards and/or protective glasses. Additional guarding around the chuck and drill may be advisable.  |
|  | ◎Drill tips of a very small diameter are usually pointed and extremely sharp. Extra care and safety precautions should be taken when handling to avoid puncture wounds.                                     | *Always use precautions and secure safe handling methods.<br>*Wear protective gloves and glasses.   |
| Brazed Inserts / Tools                           | ◎Inserts may break or become detached due to incorrect brazing.   | *Use protective equipment such as machine guards and/or protective glasses. Additional guarding around the chuck and drill may be advisable.  |
| Others   | ◎It is not advisable to use repeatedly brazed inserts as the braze may progressively weaken.  | *Do not use repeatedly brazed inserts as the strength of such inserts is lowered.   |
|  | ◎Use only for the original and intended purpose. Using outside recommended parameters is very dangerous, causing damages to machines and/or tools.  | *Always use and operate as specified, observing the required safety rules and conditions.   |

## Guidelines for Catalog

- This catalog lists products as of May 2020.
- Please note that specifications of the products listed in this catalog may be changed without notice due to continuous research & development and product improvements.
- This catalog contains the major features and relevant information on all of our products. Please contact our sales representatives or dealers if more detailed information is needed.
- Stock Status Symbols
  - : Standard stock available for Right-Hand, Left-Hand and neutral products
  - R : Stock available only in Right-Hand
  - L : Stock available only in Left-Hand
  - ★ : 1 weeks delivery
  - : 3 weeks delivery
  - : While stock lasts
  - No symbol : Not stocked

### ■ Standard

| 1) Holder Type                                  | Package quantity | Notes   |
|---|------------------|---|
| Turning holder                                  | 1 pc/case        |   |
| Milling cutter                                  | 1 pc/case        |   |
| 2) Spare parts                                  | Package quantity | Notes   |
| Screw   | 10 pcs/case      | Clamp screw, Clamp bolt, Double screw, Button screw |
| Seat  | 10 pcs/case      | Shim seat   |
| Clamp   | 10 pcs/case      | Clamp   |
| Wrench and cutter parts<br>(such as cartridges) | 5 pcs/case       | Wrench, bit, cutter product                         |
| Blade   | 1 pc/case        |   |
| Handle, Hose                                    | 1 pc/case        | Handle with magnet, handle and bit                  |
| 3) Insert Type                                  | Package quantity | Notes   |
| BIDEMICS (Brazed)                               | 1 pc/case        | JP2   |
| Endmill   | 1 pc/case        | CERAMATIC (Ceramic), S-MILL (Carbide)               |
| CBN   | 1 pc/case        | B16, B22, B23, B30, B36, B40, B52, B5K, B6K         |
| PCD, Diamond coating                            | 1 pc/case        | PD 1, PD2, UC1                                      |
| CTPW insert for cut-off                         | 5 pcs/case       | CTPW series   |
| STICK DUO<br>Solid carbide bar                  | 1 pc/case        | SHFS, SHFB, SBFS, SBFB, SBB, SBG, SBT, SSP          |
| All others                                      | 10 pcs/case      |   |

\* Packaging may vary depending on the product size.

NTK's BIDEMICS is the latest revolutionary insert material to hit the HRSA material machining industry since the release of Whisker ceramics.

BIDEMICS is a patented material with unique physical characteristics that are above and beyond current whisker grades used on HRSA material applications. The word is spreading through the HRSA industry and around the world about the results achieved when using BIDEMICS.

## JX1/JX3

NEW

Semi-finishing &amp; Finishing / Rough no scale

- Up to 480 m/min speed capability
- Much longer tool life at Whisker ceramics' speed range
- Better wear resistance and notching resistance than Whisker ceramics
- Superior surface finish vs. Whisker ceramics
- Newly added JX3 provides toughness to BIDEMICS family

## JP2

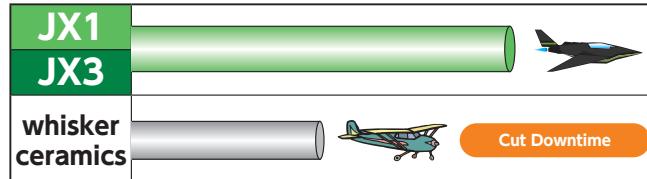

Finishing

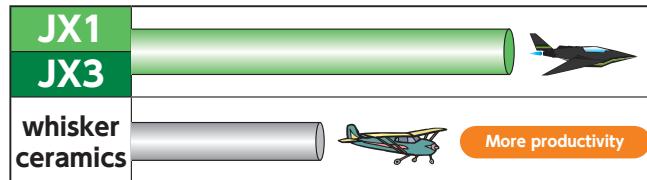

- 10 to 15x speed capability vs. carbide
- Better wear resistance and notching resistance than CBNs
- Superior surface finish to Carbide or CBN
- Strong brazing technology

### Increase Productivity vs. Whisker ceramics

#### ① Significantly extended tool life at same speed

#### ② Double speed capability

### Application : JX1 & JX3

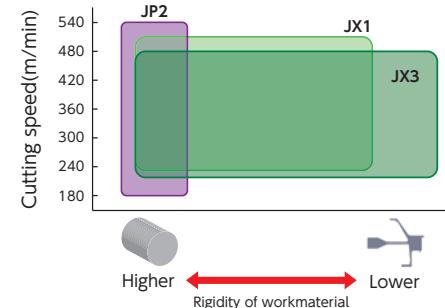

#### JX1

- Higher speed, more productivity than ceramics.
- Suitable for turning in high rigid situation(External/ endface tuening) Turning in using more toughness insert like RNGN type
- Offering excellent notch wear resistance

#### JX3

- Turning at the corner part, Grooving.
- Chipping occurred when use JX1 grade
- Turning in low rigidity situation

### Grade

| Grade      | Workmaterial         | Tooling | Applications   | Cutting speed (m/min) | Feed (mm/rev) | D.O.C (mm) | DRY | WET |
|------------|----------------------|---------|----------------|-----------------------|---------------|------------|-----|-----|
| JX1<br>JX3 | Heat resistant alloy | Turning | Rough no scale | 180- <b>480</b>       | 0.15-0.30     | 1.00-2.50  |     | ●   |
|            |                      |         | Semi-finish    | 180- <b>480</b>       | 0.10-0.25     | 0.50-2.00  |     | ●   |
| JP2        | Heat resistant alloy | Turning | Finish         | 180- <b>520</b>       | 0.10-0.25     | 0.20-1.00  |     | ●   |

## ① Higher Speeds, More Productivity

JX1/JX3's superior physical properties compared to Whisker ceramic enable you to increase speeds; potentially as much as 2X Whisker ceramic speeds; increasing productivity and potentially offsetting the need for additional equipment to meet increasing demands.

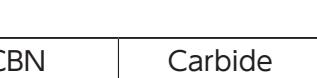

Chips break easily at higher cutting speeds vs the typically continuous chips of HRSA materials. The result is more efficient chip removal.

| 480 m/min               | Competitor's Whisker  | JX1   |
|-------------------------|---|---|
| 1st pass after 0.50 min |  |  |
| 2nd pass after 1.00 min | Impossible  |  |

## ② Longer tool life

JX1/JX3's combination of High Hardness, Superior Thermal Conductivity and Improved Strength compared to Whisker ceramics results in significantly longer tool life when applied at typical Whisker ceramic speeds, feeds, and depth of cut.

| 330 m/min               | Competitor's Whisker  | JX1   |
|-------------------------|---|---|
| 1st pass after 0.75 min |   |  |
| 2nd pass after 1.50 min |  |  |

## ③ Works well on wide range of High Temperature Alloys

BIDEMICS has success on

### Inconel 718 Inconel 625

- 718 Plus
- Rene104
- Rene41
- Waspaloy
- Rene88

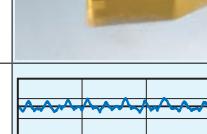

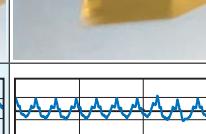

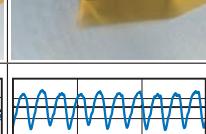

etc.

## ⑤ Speed up grooving operations

VGW style Grooving inserts are now available

## ④ Superior surface finish

|                  | JP2  | CBN   | Carbide   |
|------------------|--|---|---|
| Machined surface |  |  |  |
| Roughness        |  |  |  |
| Ra               | 0.64 µm  | 1.18 µm   | 2.75 µm   |
| Rz               | 3.36 µm  | 5.56 µm   | 9.64 µm   |
| Cutting speed    | 240 m/min  | ◀   | 35 m/min  |
| Feed             | 0.15 mm/rev  | ◀   | ◀   |
| Cycle time       | 3.3 min  | ◀   | 14.7 min  |
| Removed chip     | 48 cc  | ◀   | ◀   |

JP2's outstanding Wear Resistance and Notching Resistance results in work piece surface finishes consistently superior to either CBN or Carbide

# Machining HRSA Materials with BIDEMICS and Ceramics

## Solutions for the Aerospace & Energy Industries

### BIDEMICS - Game Changer

- 480m/min Speed Capability
- Double tool life at whisker's speed range

**JX1**

#### ■ Features

- Up to 480m/min speed capability
- Much longer tool life at Whisker ceramics' speed range
- Superior surface finish vs. Whisker ceramics

#### ■ Work Materials

- Inco 718 • 718 Plus
- Powdered metal
- Inco 625 • Rene

→C2

**JP2**

#### ■ Features

- 10 to 15x speed capability vs. carbide
- Better wear resistance and notching resistance than CBNs
- Superior surface finish to Carbide or CBN

#### ■ Work Materials

- Inco 718 • 718 Plus
- Powdered metal • Inco 625 • Rene

→C2

**SX7**

#### ■ Features

- Can run at same cutting condition as whisker ceramics
- Best grade for high-speed milling

#### ■ Work Materials

- Inco 718 • Inco 625
- Waspaloy • Udimet 720

→C15

**SX3**

#### ■ Features

- Excellent wear resistance and toughness. Wide range of HRSA machining applications: Roughing with scale - semi finishing turning.
- Able to machine even the newest generation of HRSA work materials (like Rene) as well as most common HRSA materials; such as Inconel 718.

#### ■ Work Materials

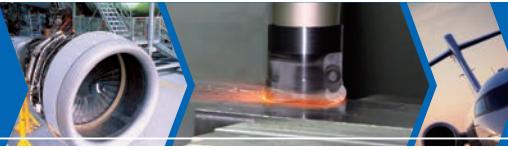

- Inco 718 • 718 Plus
- Powdered metal • Inco 625
- Rene

→C14

### **SiAION - Workhorse**

- Durable for scale to semi-finish machining

WATCH ON  
YouTube

## JX3

**■ Features**

- Added toughness in BIDEMICS
- Same speed capability as JX1

**■ Work Materials**

- Inco 718 • 718 Plus • Powdered metal
- Inco 625 • Rene

→C2

Application Guidance  
Milling Guidance→L4  
→N4Turning Guidance  
Grooving Guidance→L6  
→A17

## WA5 / WA1

**■ Features**

- Better flank wear resistance compared to SiAlON ceramics
- Better notching resistance compared to competitor's whisker ceramics

**■ Work Materials**

- Inco 718 • Inco 625

→C16

## Whisker - Versatile Player

● Productivity and reliability

## SX5

**■ Features**

- Best grade for scale and interruptions
- Best grade for machining high-cobalt alloys

**■ Work Materials**

- Waspaloy • Udimet 720
- 718 Plus • Rene 41

※ Production by order.

## SX9

**■ Features**

- Extreme toughness makes higher feed and heavier DOC machining possible
- Best grade for machining Inco 718 with scale

→C15

**■ Work Materials**

- Inco 718 • Inco 706
- Inco 713 • Rene

## Case study

### BIDEMICS

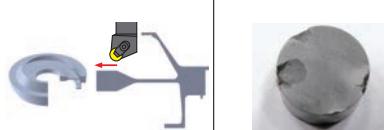

#### JX1

4 times longer tool life

##### Turbine disc (René104 rough/semi-finish)

$V_c = 210 \text{ m/min}$ ,  $f = 0.18 \text{ mm/rev}$ ,  $a_p = 1.00 \text{ mm}$ , Wet

| René104               | Competitor's whisker ceramic | JX1 |
|-----------------------|------------------------------|-----|
| Cutting speed (m/min) | 210                          | ↔   |
| Tool life (pass)      | 1                            | 4   |

- René 104 is a difficult material to cut.
- JX1 cut 4 times longer tool life than whisker ceramics.

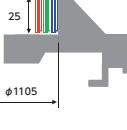

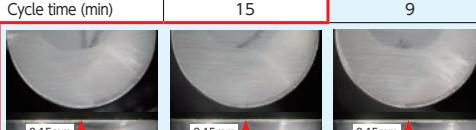

#### JX1

1.7 times higher speed

##### Turbine disc (Inconel718 rough/semi-finish)

$V_c = 210 \text{ m/min}$ ,  $f = 0.16 \text{ mm/rev}$ ,  $a_p = \sim 1.50 \text{ mm}$ , Wet

|                       | Competitor's whisker ceramic | JX1 |
|-----------------------|------------------------------|-----|
| Cutting speed (m/min) | 210                          | 350 |
| Chip removal (cc/min) | 50                           | 84  |
| Cycle time (min)      | 15                           | 9   |

- JX1 cut 1.7 times faster than Competitor's Whisker and kept good edge.
- Reducing cycle time dramatically.

#### JX3

##### Turbine disc (Inconel718)

| Grade                 | Competitor's whisker ceramic | JX3 |
|-----------------------|------------------------------|-----|
| Insert Shape          | RPGX120700                   | ↔   |
| Cutting speed (m/min) | 210                          | 350 |
| Feed(mm/rev)          | 0.15                         | ↔   |
| D.O.C(mm)             | 1.5                          | ↔   |
| WET                   | ↔                            |     |

##### NTK : JX3

82 cc/min

##### JX3

##### Competitor's whisker ceramic

48 cc/min

#### JX3

##### Turbine disc (Inconel718)

| Grade                 | Competitor's whisker ceramic | JX3 |
|-----------------------|------------------------------|-----|
| Insert Shape          | RPGX120700                   | ↔   |
| Cutting speed (m/min) | 210                          | 360 |
| Feed(mm/rev)          | 0.15                         | ↔   |
| D.O.C (mm)            | 1.8                          | ↔   |
| WET                   | ↔                            |     |

##### NTK : JX3

100 cc/min

##### JX3

##### Competitor's whisker ceramic

60 cc/min

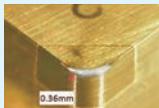

#### JP2

12 times higher productivity

##### Turbine disc (Inconel718 finishing)

$V_c = 240 \text{ m/min}$ ,  $f = 0.08 \text{ mm/rev}$ ,  $a_p = 0.25 \text{ mm}$ , Wet

| Inco718                           | Competitor's coated carbide | JP2 |
|-----------------------------------|-----------------------------|-----|
| Cutting speed (m/min)             | 20                          | 240 |
| Chip removal per minutes (cc/min) | 0.4                         | 4.8 |
| Tool life (pass)                  | 1                           | 1   |

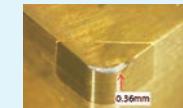

- JP2 cut 12 times faster than carbide insert, reducing cycle time dramatically

4 times higher productivity

##### Turbine disc (Inconel718 no scale, semi-finishing)

$V_c = 180 \text{ m/min}$ ,  $f = 0.10 \text{ mm/rev}$ ,  $a_p = 0.4 \text{ mm}$ , Wet

| Inco718                           | Competitor's coated carbide | JP2 |
|-----------------------------------|-----------------------------|-----|
| Cutting speed (m/min)             | 45                          | 180 |
| Chip removal per minutes (cc/min) | 1.8                         | 7.2 |
| Tool life (pass)                  | 1                           | 4   |

- JP2 cut 4 times faster than carbide insert, reducing cycle time dramatically

### SiAlON ceramics

#### Turning(semi-finishing) : Turbine disc ● Inconel718

|                       | current tool    | NTK |

Whisker ceramics WA1 achieved stable machining.

# Guideline for grooving HRSA materials

BIDEMICS / Ceramic grooving inserts provide high speed capability to your process. Whisker ceramic is the most versatile option in this category. NTK also offers BIDEMICS and SiAlON grades for more productivity and stability.

## New SiAlON Grade for Machining HRSA materials

# SX3

*NTK's versatile SX3 grade has been developed to achieve a SiAlON material composition with the ideal blend of excellent wear resistance and toughness to successfully machine a wide variety of HRSA materials*

Machined surface · semi-finishing  
**HRSA materials**  
(Wear resistance of SX7)

Forged surface **HRSA materials**  
(Toughness of SX9 / SX5)

WATCH ON  
YouTube

## Features

- Consistent in excellent wear resistance and toughness.
- Able to machine HRSA materials widely: Rough turning with scale ~ semi-finish turning.
- Able to machine even the newest generation of HRSA materials (like Rene material) as well as today's most common HRSA materials; such as Inconel 718.
- Able to machine milling with high efficiency.

## For Maximum Productivity

- A continuous cut is recommended. An interrupted cut may cause chipping or breakage.
- When using a Hydraulic or Shrink chuck, blow air to the arbor body, DON'T blow air to the endmill itself.
- A Minimum speed of 300m/min is required. (Don't run at lower speed.)
- A 1.5 degree ramping angle is recommended. Run at 50% lower feed rate when ramping cut.

### When cutting HRSA materials

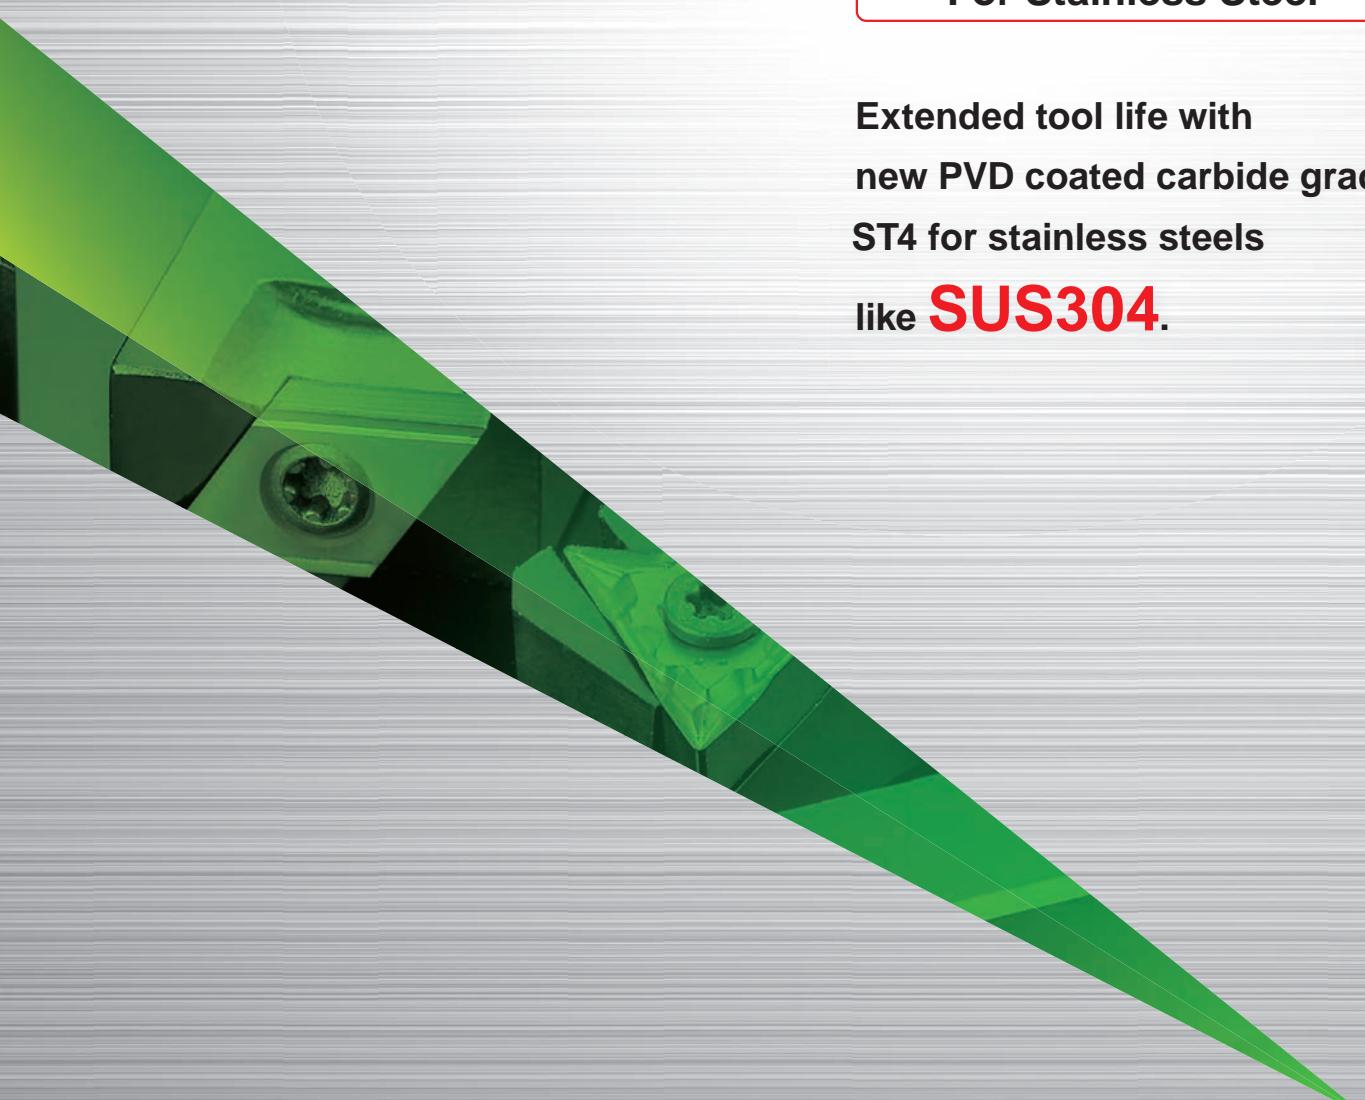

- Continue to machine even if you see BUE, removing BUE may cause chipping or breakage to the edge.
- High speed machining work hardens the material. For this reason, leave at least 0.3mm of material for a finishing process.

## Stable and consistent performance when machining stainless steel

Low tool life , and unstable chip evacuation are factors preventing stable machining of stainless steel.

The New PVD coated carbide grade ST4 solves the issues related to machining stainless steel.

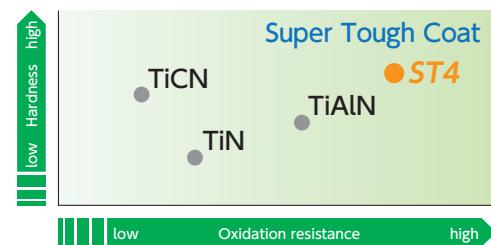

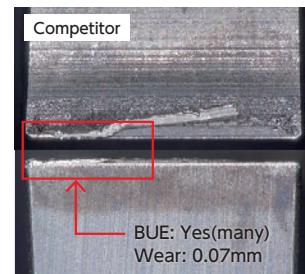

### Higher hardness and oxidation resistance

NTK's unique coating technology creates a high-aluminum composition.

Extends tool life and allows high-speed machining of stainless steel.

NTK vs. competitor(cut off)

Workmaterial : SUS304(Φ11) Vc=80m/min f=0.03mm after 200pcs cut-off

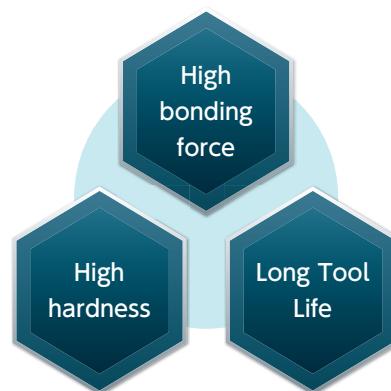

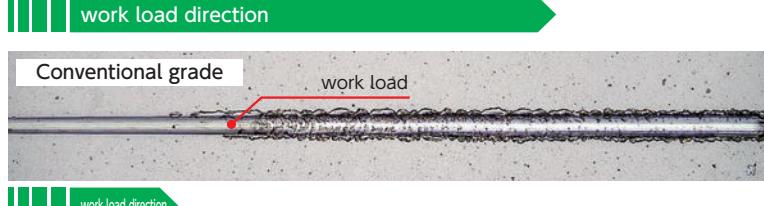

### Stable machining, excellent surface finish ⇒ Extended tool life

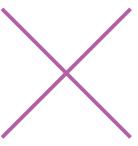

NTK new PVD coated carbide grade ST4 improved bonding force and surface smoothness .

It prevents BUE trouble from stainless steel machining, and achieved stable cutting.

### Features

Specially designed sharp chipbreaker provides 1 pass turning up to 5.0mm.

Reduce cutting force with high DOC turning, and achieved excellent chipcontrol with good surface finish.

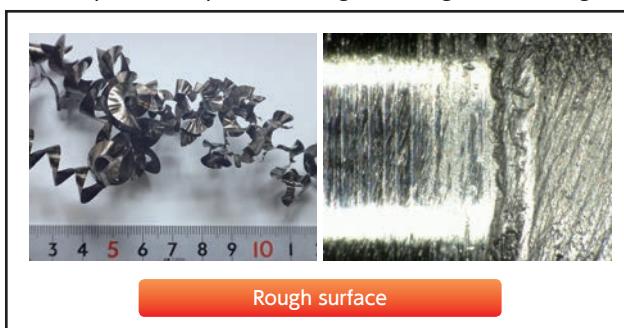

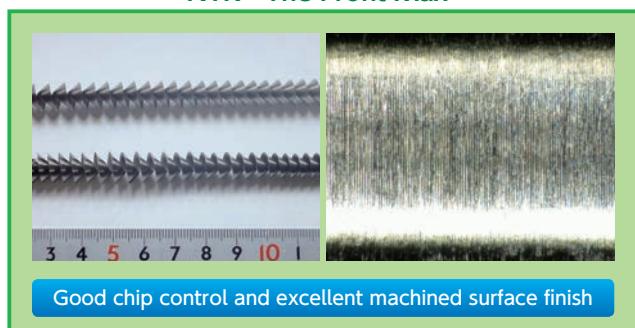

**DOC 5.0mm**

Workmaterial : SUS304 Cutting condition : Vc=80m/min f=0.03mm/rev WET

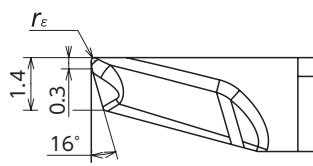

NTK The Front Max

Competitor's chipbreaker designed for high DOC turning

### Features

#### Typical Grooving Problems

- Chips remain at the bottom of groove
- Bird's nest of chips

#### Center bump and dent design improve chip control

Help chip curl & control.

Excellent surface finish when grooving.

#### Improve chip control when side turning.

Chip control performance at side turning improved (MAX. ap- 2.0mm)

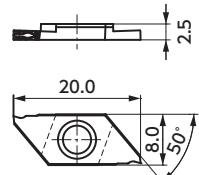

#### Outer periphery polishing offers excellent surface finish

#### Toolholder

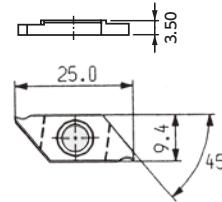

| Toolholder        |                   |

※Max. Cut-off Dia. is indicates the cutting diameter of the insert when the top of the cutting edge is located on center

### Features

Folds chip strongly from both ends and achieves superior machined surface finish.

Excellent chip control

## Features

- F type chipbreaker allow chips to evacuate backward.
- Combination of the F-chipbreakers and Mogul Bar delivers the best performance.

|                | DOC (mm) | Feed(mm/rev) |     |
|----------------|----------|--------------|-----|
| FG chipbreaker | 0.1      | 0.05         | 0.1 |
|                | 0.1      |              |     |
|                | 0.3      |              |     |
|                | 0.5      |              |     |
|                |          |              |     |

Note: Right-hand inserts with FG and F1 chipbreakers should be used with right-hand holders

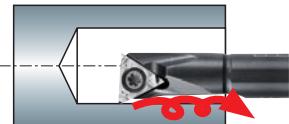

Material : SCM435 Holder : S10K-STUPR11D12-OH Insert : TPGH10304 Series Cutting condition :  $V_c = 80\text{m/min}$  Bore diameter :  $\phi 12$  External coolant Depth of cut : 20mm

Typical inserts

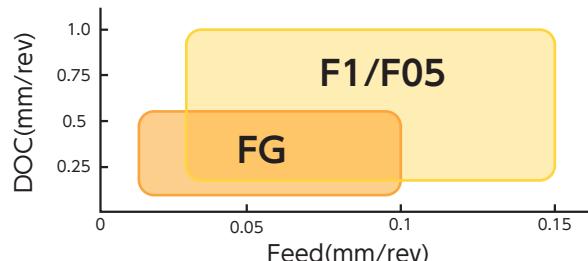

Direct flow chips forward.  
Then packed chips damage and break cutting edge.

F05, F1, FG chipbreakers

Direct chips backwards and eliminate chipping on inserts.

## Chip control range

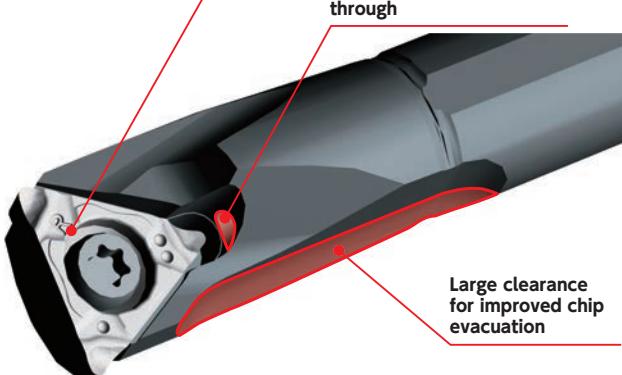

## Features

Combination of the F-chipbreakers delivers the best performance

All Mogul Bars are coolant through

Large clearance for improved chip evacuation

## ■ Recommended Cutting Condition (Grooving, Cut-off)

Endmills

Rotating Tools

Information

Index

- Excellent surface finish
- Reduce cutting force
- Provide stable machining

- Line up Expansion  
 $\phi 8.0$  and  $\phi 10.0$  with  $\phi 7.0$  shank Dia.

NEW

WATCH ON  
YouTube

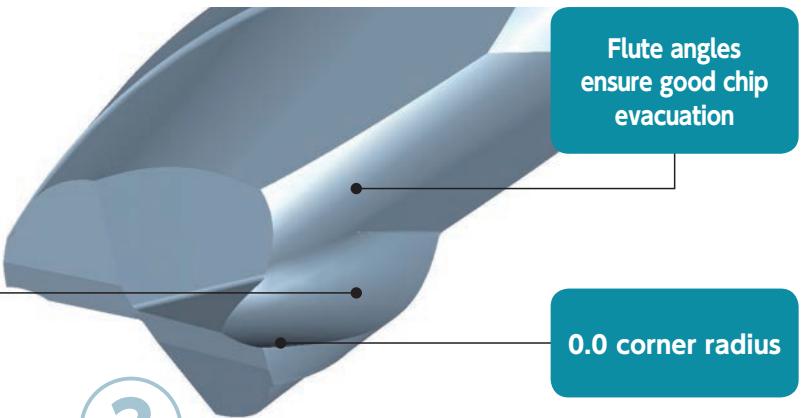

## Features

1

**The sharp edge creates a remarkable finish on machined surface.**

High rake angle to reduce cutting force

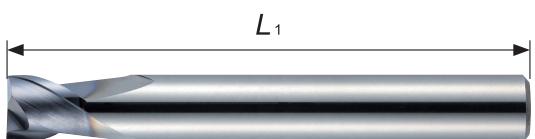

2

**Designed for swiss type lathe**

$\phi 3.0 / \phi 4.0 = 40.0\text{mm}$

$\phi 5.0 / \phi 6.0 = 45.0\text{mm}$

$\phi 7.0 / \phi 8.0 / \phi 10.0 = 50.0\text{mm}$

3

**2, 3, 4 fl utes cover a variety of applications.  
(2 fl utes available in  $\phi 2\text{mm}$ )**

2 flutes

3 flutes

4 flutes

## Comparision of machined surfaces

|                            | NTK (S-MILL)                           | Competitor A   | Competitor B         |

## Field result

| SUS416F(D-cut) $\phi 6\text{mm}$ -2 flutes  |                             |
|---|-----------------------------|
| Work material : SUS416F   |                             |
| rev/min : 3,200   |                             |
| Feed(mm /rev) : 140   |                             |
| DOC(mm) : 0.6   |                             |
| Coolant : WET   |                             |
| NTK : S-MILL  | 12,000 pcs/corner+ $\alpha$ |
| Competitor's solid endmill  | 10,000 pcs/corner           |
| As the competitor's endmill reached the end of its tool life with bad surface finish.<br>NTK's S-MILL maintained quality surface finish through out its longer tool life. |                             |

| S45C(Hexagon machining $\phi 10 \Rightarrow \phi 8\text{mm}$ AF) $\phi 6\text{mm}$ -2 flutes  |                         |
|---|-------------------------|
| Work material : S45C  |                         |
| rev/min : 2,600   |                         |
| Feed(mm /rev) : 480   |                         |
| DOC(mm) : 1.0   |                         |
| Coolant : WET   |                         |
| NTK : S-MILL  | 70 pcs/corner+ $\alpha$ |
| Competitor's solid endmill  | 50 pcs/corner           |
| The S-Mill's sharpness reduced the occurrence of burrs and increased tool life; clear improvements over the competitor's tool. The sharp cutting edge also produces noticeably less sound than the current tooling. |                         |

## Recommended Cutting Condition

| Flute    | Cutting diameter $\phi D_c$ (mm) | Carbon steel S45C        |               | Alloy steel SCM435       |               | Stainless steel SUS304   |               | $a_e = \phi D_c \times 0.2$ | $a_e = \phi D_c \times 0.5$ | $a_e = \phi D_c \times 0.75$ | $a_e = \phi D_c \times 0.9$ | $a_e = \phi D_c$ |     |

# The Front Max

*NEW style front turning insert for swiss type lathe.  
Specially designed chipbreaker provides excellent  
chip control and sharpness.*

**MAX DOC**

**5.0mm available**

WATCH ON  
**You Tube**

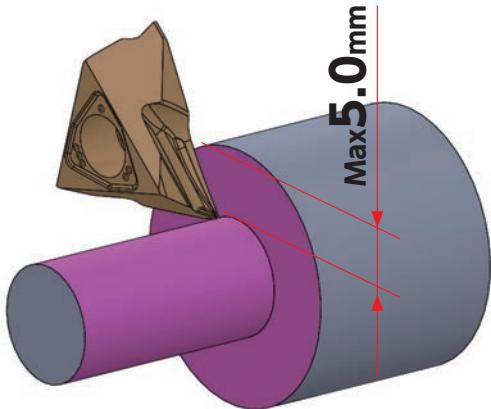

## Are these common issues in your machining operation?

- It is hard to machine a large depth of cut on Swiss type lathes.
- It is difficult to control chips and dimensions.

The Front Max is the solution.

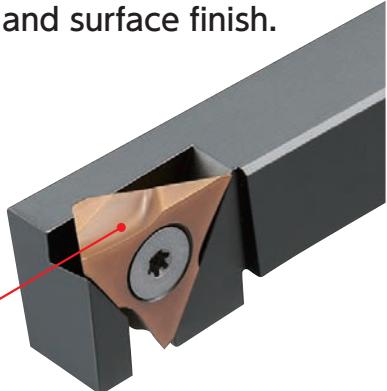

### Features

#### 1 Up to 5.0mm DOC capability

Specially designed chipbreaker reduces cutting resistance, achieves excellent chip control and surface finish.

Excellent chip control and surface finish.

Stable chip control by special chipbreaker design.

#### 2 Rigid side clamp system

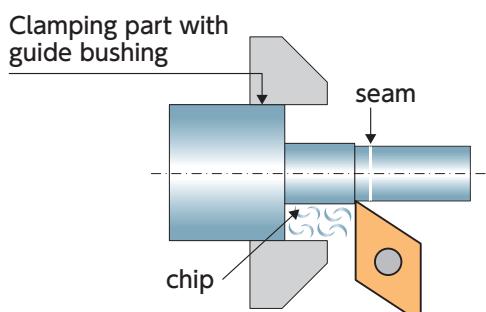

Strong clamping prevents moving insert . This provides stable turning process.

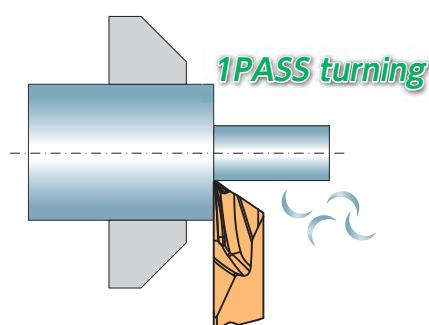

### Tooling for Large DOC

#### Conventional tooling

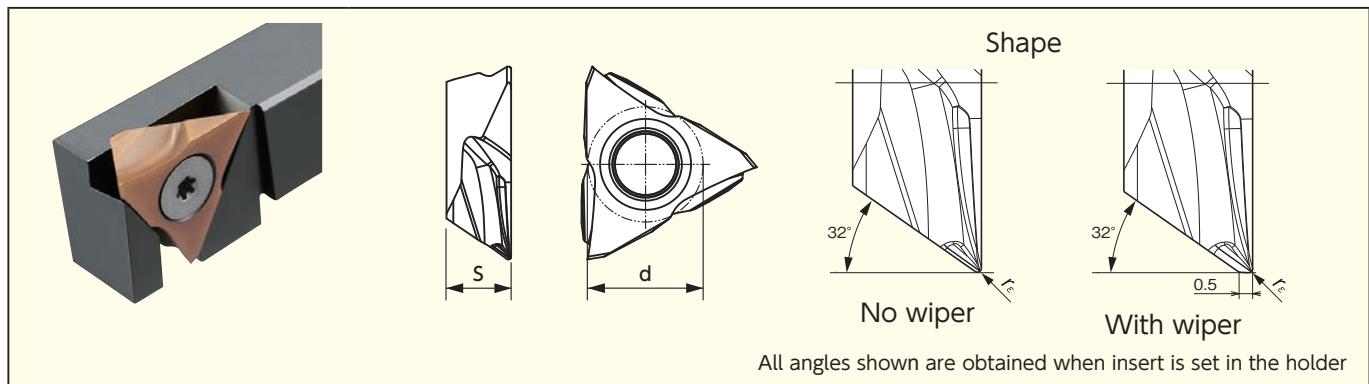

- Longer cycle time with roughing and finish turning.
- Seam on surface occurs with separate turning.
- Tool wear increase by 2 passes
- Chip may go into guide-bushing.
- Need to run multi times due to guide-bushing limitation

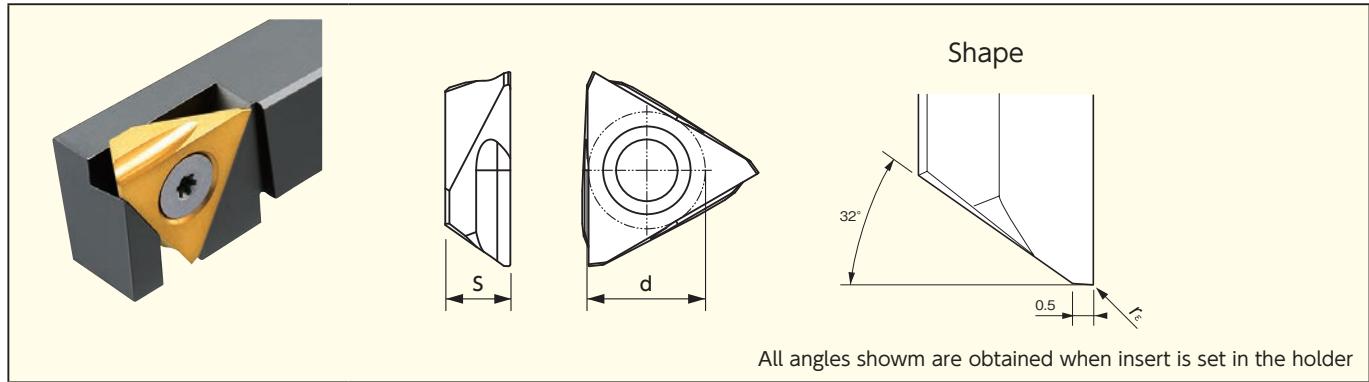

#### The Front Max

- Reduce cycle time
- Extend insert tool life
- Improve part quality
- Simplify machining program

## Cutting performance

**DOC 5.0mm** Work material : SUS304 Cutting condition :  $V_c=80\text{m/min}$   $f=0.03\text{mm/rev}$  WET

### NTK The Front Max

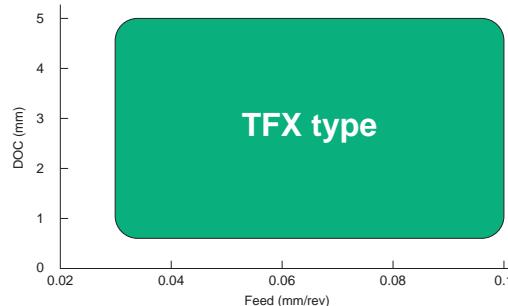

Competitor's chipbreaker designed for high DOC turning

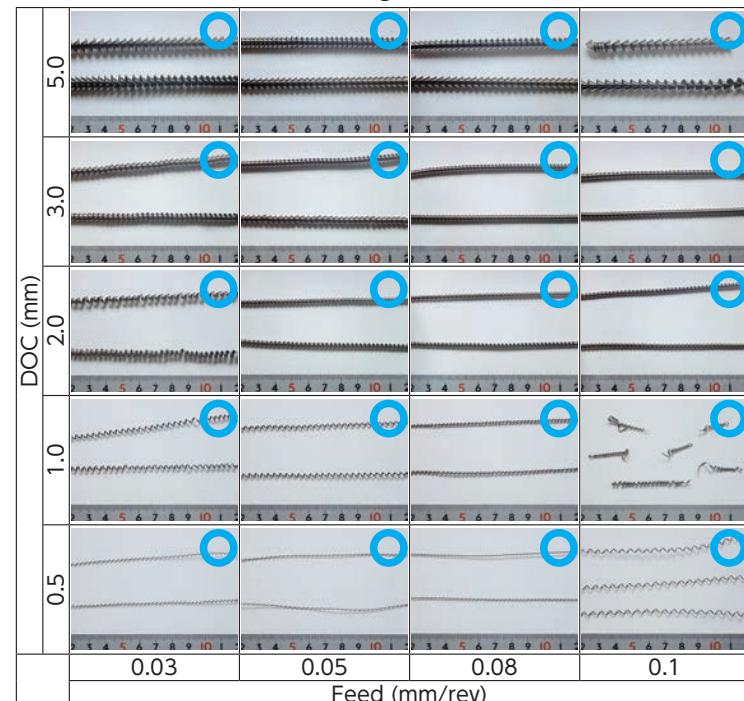

**Excellent chip control in variety of cutting conditions**  
Covers a wide range of Doc's and feeds.

### ⟨Chip control⟩

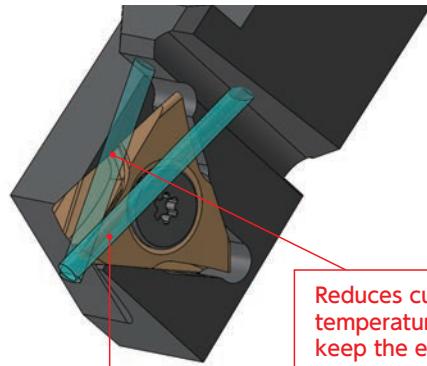

Workmaterial : SUS304 Cutting condition :  $V_c=80\text{m/min}$  WET

### Available in coolant through toolholder

- Can take 30° taper.
- Use with TFX type insert enables stable turning.

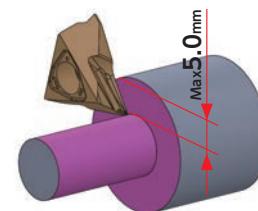

Improves part tolerance by steady coolant supply to the edge

Work material : SUS304

### The Front Max

Competitor

|                      |      |      |
|----------------------|------|------|
| Cutting speed(m/min) | 80   | 110  |
| Feed(mm/rev)         | 0.03 | 0.01 |
| DOC(mm/rev)          | 5.0  | ←    |
| Coolant              | Wet  | ←    |

Insert item number:  
DM4 TFX3302MR

### The Front Max

180pcs./corner

Competitor 50pcs./corner

• NTK Front Max provided 5.0mm DOC with higher feed and got 3 times longer tool life.

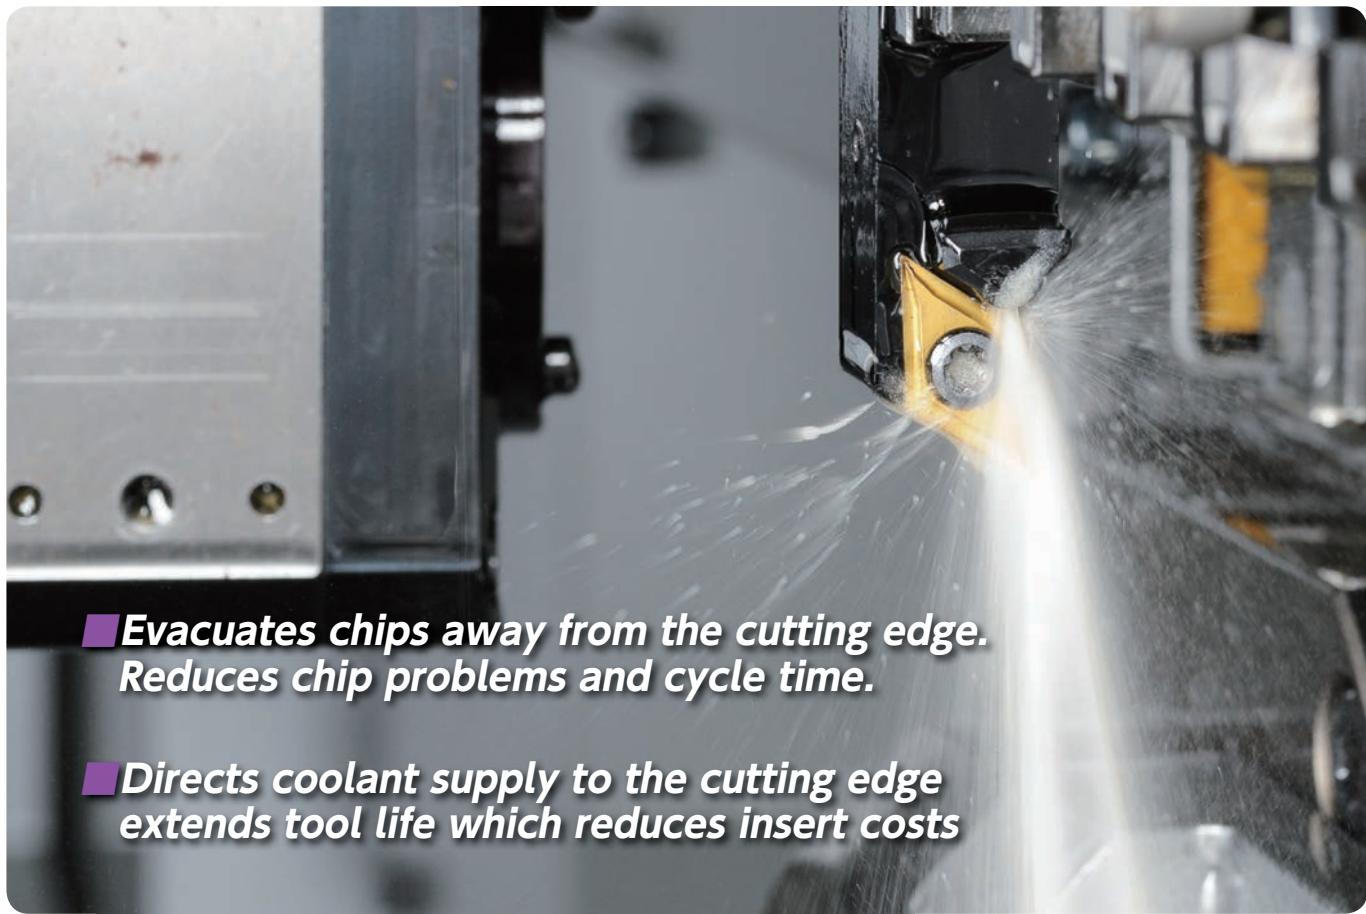

**NEW**

Internal coolant type tool holders

# SPLASH Series Lineup expansion

**NTK**

New Products

**■ Evacuates chips away from the cutting edge.  
Reduces chip problems and cycle time.**

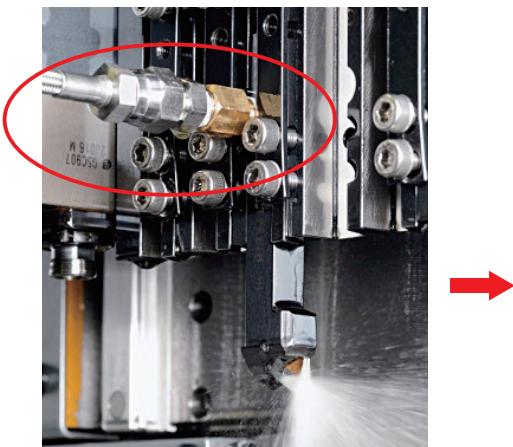

**■ Directs coolant supply to the cutting edge  
extends tool life which reduces insert costs**

## **Hose free capability - OH2 - new feature added**

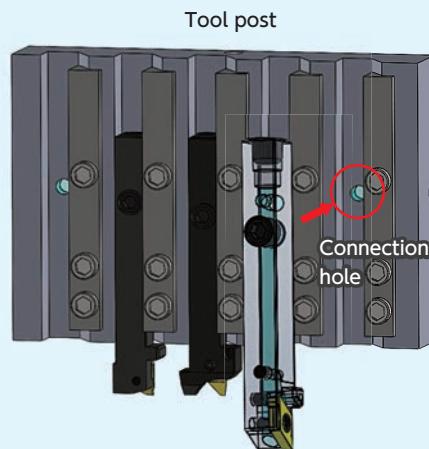

*Coolant is supplied from the tool post directly to the tools*

※ No coolant hose is needed

※Conventional type [-OH] type (hose is needed)

**NEW [-OH2 type]**  
※No coolant hose is needed

※Sample image

- Eliminates chip entanglement on hoses
- Use the tool post space effectively
  - ➡ Can install more SPLASH toolholders, for higher productivity

### NOTE for 「OH2」 type toolholder

- When coolant is supplied from the tool post directly to the holder:  
please remove set screw [B] (SS0505SC) and install both set screws [A] (for hoseconnections) on side and rear of toolholder.
- Wrench for screw part [A] (SS0605SC) is not included.  
Please use hex wrench3.0(LW-3) for SS0605SC, hex wrench5.0(LW-5) for SPR1/8.

# STICK DUO SPLASH

*Coolant through sleeves for ID Boring with Adjustable Overhang Mechanism*

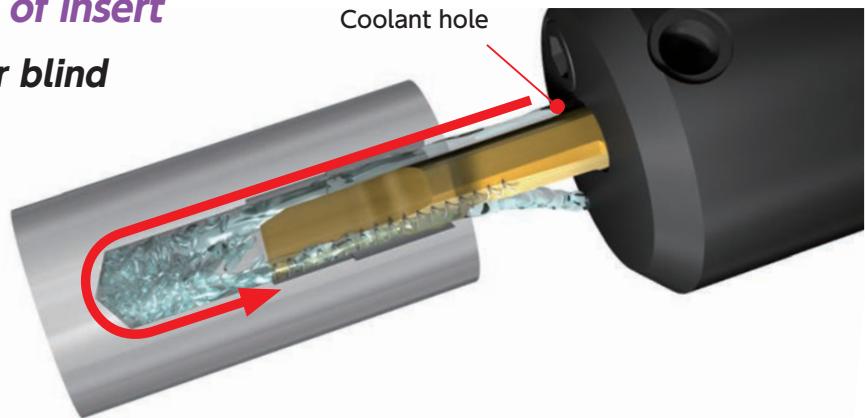

## Features

### *Can choose from 2 coolant directions*

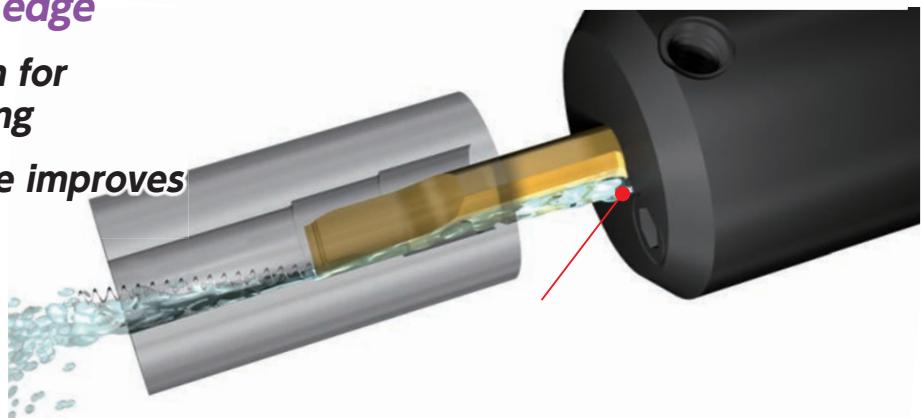

#### *Coolant towards backside of insert*

- **Good chip evacuation for blind hole machining**

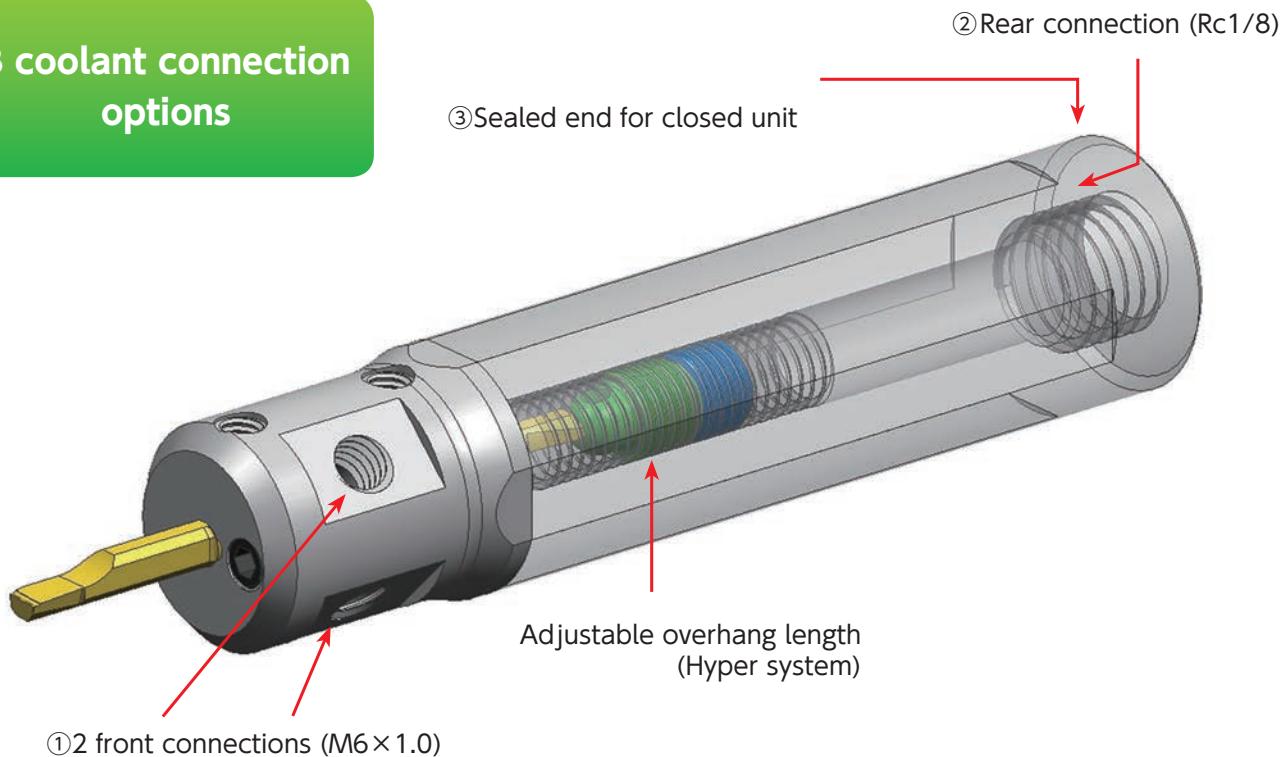

#### *Coolant towards insert edge*

- **Good chip evacuation for through-hole machining**
- **Coolant to insert edge improves wear resistance**

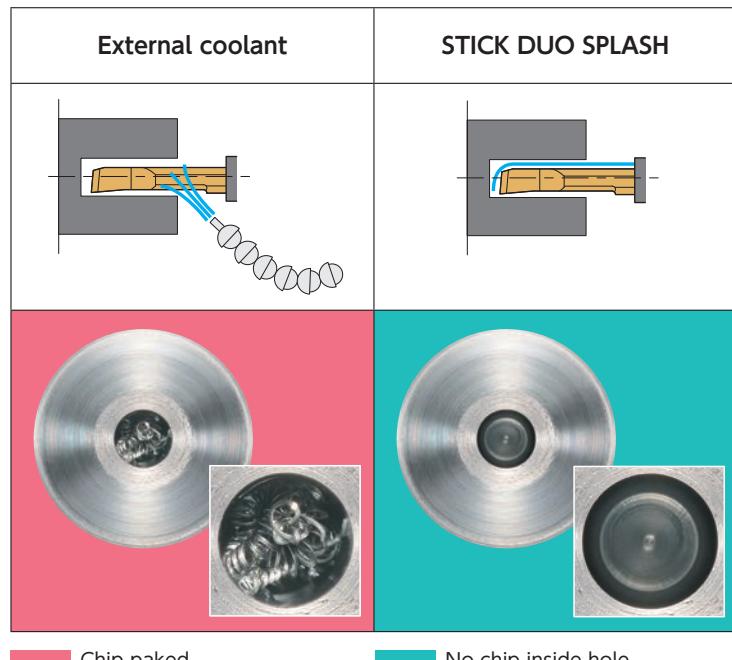

## Structure

## 3 coolant connection options

## Machined work piece comparison

Work material : SCM435

Insert : SHFS040R005S

Cutting speed :  $v_c = 50 \text{ m/min}$ DOC :  $a_p = 0.2$ Feed :  $f = 0.02 \text{ mm/rev}$ 

Hole depth : 15mm

Pilot hole :  $\phi 5.1 \times 28L$ 

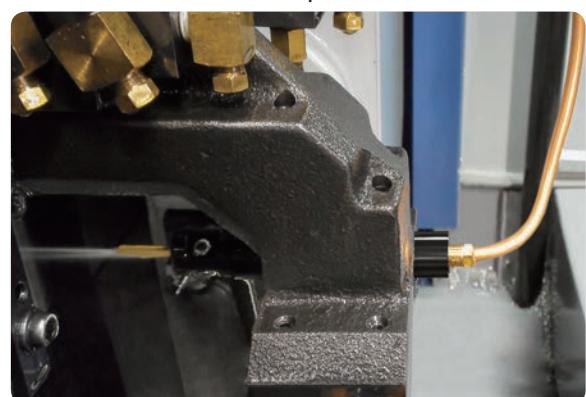

Coolant pressure : 5MPa

## Picture for jointing coolant hose

## Front connection example

## Rear connection example

※1 Select screw ④ to connect coolant hose backside

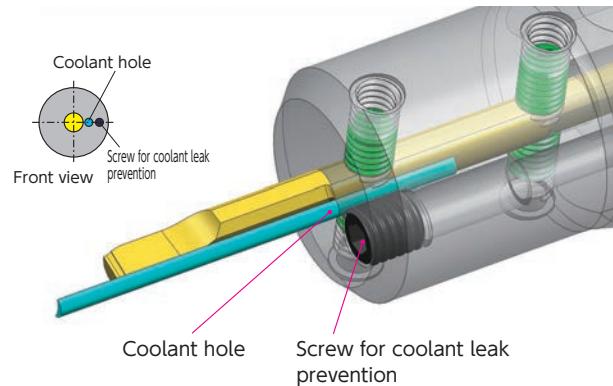

※2 Select screw ⑤ to connect coolant hose frontside

## ■ How to set bar in the sleeve when internal coolant to insert tip or to insert backside

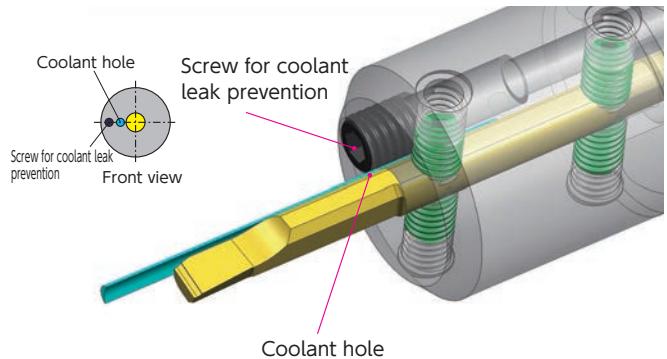

By rotating sleeve upsidedown, you can select the coolant output position.

Coolant hole located in screw side for coolant leak prevention. See the following about the details.

① Coolant to insert edge

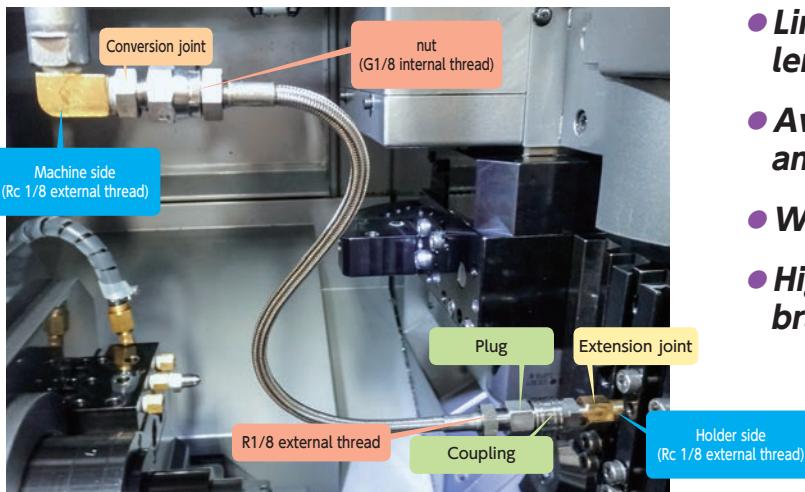

② Coolant to insert backside

## Coolant Components

### Coolant hose for connecting with R1/8

Ex. of connecting ①

- Line up a wide range of coolant hose length

- Available for 2 types of coupling and conversion joint

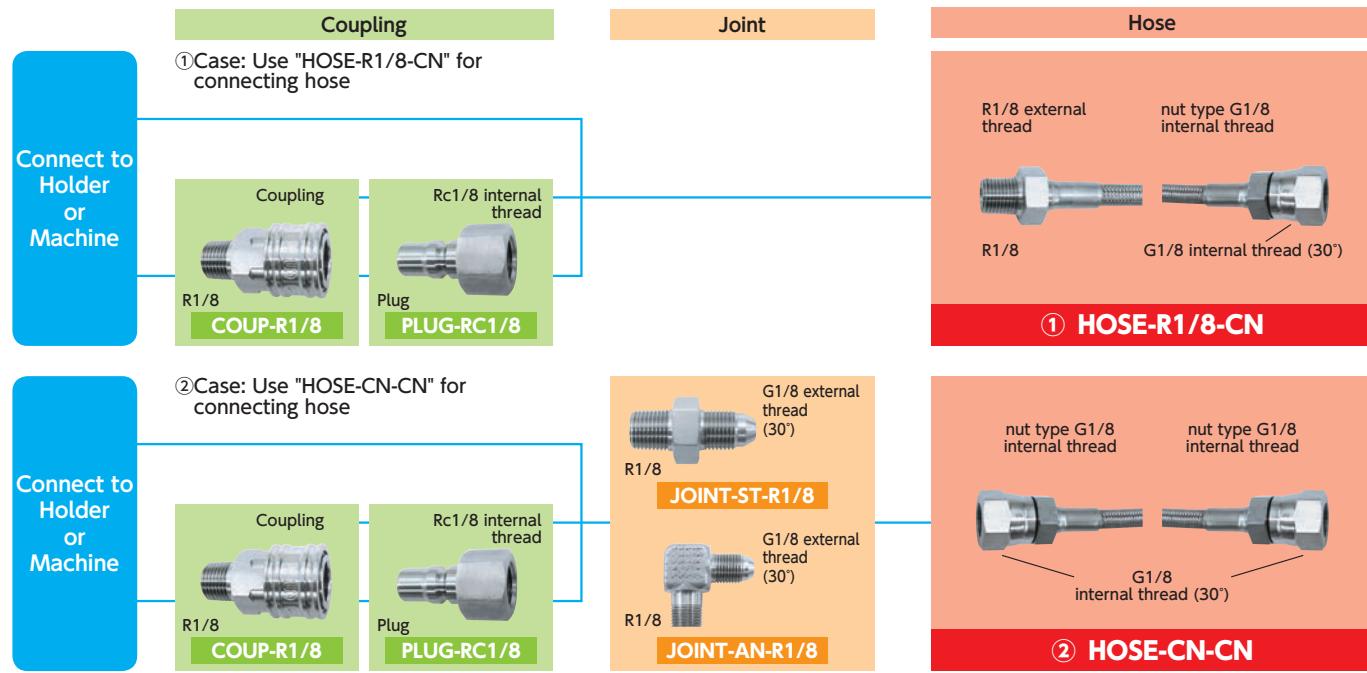

- Working pressure MAX. 20.6 MPa

- High quality flexible stainless steel braided hose

Ex. of connecting ①

| Parts            | P/N              |

NTK Cutting Tools offer a wide range of tool materials, including PCD, CBN, ceramics and coated carbides, to accommodate various cutting applications. In the SS Tool series, PCD and micro-grain ultra-hard carbides are set as the standard materials to meet the requirements of automatic and sliding head machines. They are especially suited to micro-machining, offering excellent cutting performance and high quality surface finish.

NTK cutting tools offer a wide range of tool materials, including PCD, CBN, ceramics and coated carbides, to accommodate various cutting conditions.

For the SS tool series, PCD, micro-grain carbides are set as the standard materials to meet the requirements of automatic lathes specifically micro-machining, with excellent cutting performance and high quality surface finish.

## BIDEMICS

## Highly efficient machining for Heat resistance alloy

NTK's BIDEMICS is the latest revolutionary insert grade to hit the HRSA material machining industry since the release of Whisker ceramics.

BIDEMICS is a patented material with unique physical characteristics that are above and beyond current whisker grades used on HRSA material applications.

The word is spreading through the HRSA industry and around the world about the results achieved when using BIDEMICS.

For more information, please go to ... C2

## Ceramic

## For high-efficiency cutting of hardened materials and cast irons

Ceramic tools offer high cutting speed and highly efficient machining thanks to their outstanding heat resistance and chemical stability.

A wide range of tools in various shapes, made of different types of ceramic including silicon nitride, alumina and whisker series, enables you to achieve high cutting speeds and higher productivity than carbide tools in many applications.

For more information, please go to ... C8

## CBN

## For high-speed cutting of hardened materials and cast irons

This material is made of CBN (Cubic Boron Nitride) as the base component and a special ceramic binder, giving a high level of hardness at both room and high temperature ranges. One of its superior features is that it causes very little chemical reaction with work piece materials.

It is mainly used for machining of materials with high hardness and high-speed cutting of cast iron.

For more information, please go to ... C6

**PVD coated micro-grain carbide****For precision cutting and general machining of hard-to-cut materials including stainless steel**

The carbides in this grade has been developed by reducing the size of the WC hard grains, which are the main component of cemented carbide, to approximately 1μ. By coating such carbide by the PVD method with TiN, TiCN, or TiAlN, these materials are the most suitable for precision cutting and cutting of difficult-to-cut materials.

PVD coating on such micro grain carbide offers much improved wear resistance and thermal shock resistance.

These carbides are tougher and harder than conventional carbides, with much sharper cutting edges.

[For more information, please go to ... D2](#)

**Micro-grain carbide****For cutting of non-ferrous metals and non-metal materials**

Using non-coated micro-grain ultra-hard carbide, which provides ultra sharp cutting edges, this type of carbide usually, has a mirror-like polished surface.

This type is the most appropriate tool material for machining of non-ferrous metals and resins, where especially sharp cutting edges are required.

[For more information, please go to ... D2](#)

**CVD coated carbide****For general cutting of steels and cast irons**

This type of carbides, suitable for cutting steel and cast iron, use carbide as the base material with coating applied by the CVD method for extra wear and heat resistance.

[For more information, please go to ... D6](#)

**New diamond coating****For Carbon and Ceramic**

High purity and high hardness diamond coating are filmed minutely, so it has better wear resistance comparing to the past PCD tools.

[For more information, please go to ... C4](#)

**PCD****For high-speed cutting of non-ferrous metals**

As diamond is the hardest and lowest in affinity with nonferrous metals cutting material , its deposition resistance as well as wear resistance is excellent. However, as a tool material, its low toughness and characteristically low chipping resistance posed problems.

PCD is the material that solved these problems by sintering micro-grain diamond to make a polycrystalline structure without affecting the diamond-specific characteristics.

This material allows you to cut non ferrous metals at a higher speed than carbide cutting tools.

**BIDEMICS**

NTK's BIDEMICS is the latest revolutionary insert material to hit the HRSA material machining industry since the release of Whisker ceramics.

BIDEMICS is a patented material with unique physical characteristics that are above and beyond current whisker grades used on HRSA material applications. The word is spreading through the HRSA industry and around the world about the results achieved when using BIDEMICS.

**JX1/JX3**

NEW

Semi-finishing &amp; Finishing / Rough no scale

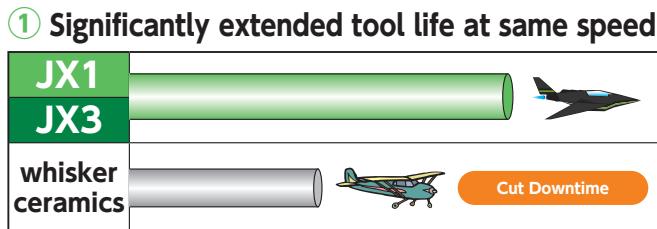

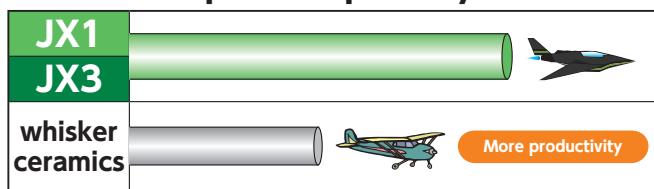

- Up to 480 m/min speed capability
- Much longer tool life at Whisker ceramics' speed range
- Better wear resistance and notching resistance than Whisker ceramics
- Superior surface finish vs. Whisker ceramics
- Newly added JX3 provides toughness to BIDEMICS family

**JP2**

Finishing

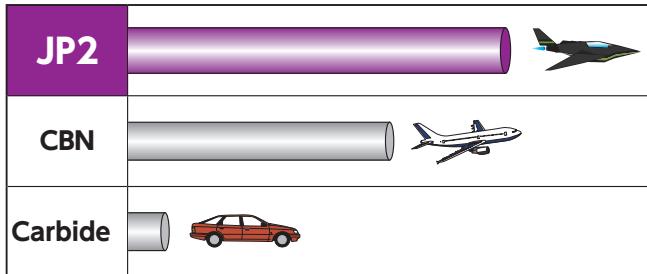

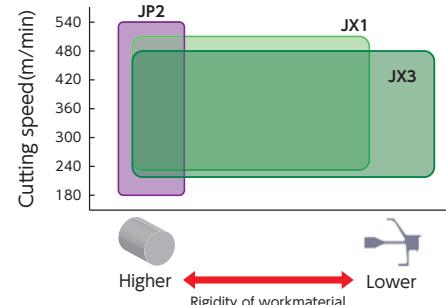

- 10 to 15x speed capability vs. carbide
- Better wear resistance and notching resistance than CBN
- Superior surface finish to Carbide or CBN
- Strong brazing technology

**Increase Productivity vs. Whisker ceramics****② Double speed capability****Application : JX1 & JX3****JX1**

- Higher speed, more productivity than ceramics.
- Suitable for turning in high rigid situation(External/ endface turning) Turning in using more toughness insert like RNGN type
- Offering excellent notch wear resistance

**JX3**

- Turning at the corner part, Grooving.
- Chipping occurred when use JX1 grade
- Turning in low rigidity situation

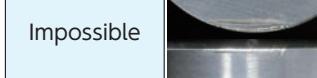

**Increase Productivity vs. Carbide****① 10 to 15 times higher speed capability****Grade**

| Grade      | Workmaterial         | Tooling | Applications   | Cutting speed (m/min) | Feed (mm/rev) | D.O.C (mm) | DRY | WET |
|------------|----------------------|---------|----------------|-----------------------|---------------|------------|-----|-----|
| JX1<br>JX3 | Heat resistant alloy | Turning | Rough no scale | 180- <b>480</b>       | 0.15-0.30     | 1.00-2.50  |     | ●   |
|            |                      |         | Semi-finish    | 180- <b>480</b>       | 0.10-0.25     | 0.50-2.00  |     | ●   |
| JP2        | Heat resistant alloy | Turning | Finish         | 180- <b>520</b>       | 0.10-0.25     | 0.20-1.00  |     | ●   |

## 1 Higher Speeds, More Productivity

JX1/JX3's superior physical properties compared to Whisker ceramic enable you to increase speeds; potentially as much as 2X Whisker ceramic speeds; increasing productivity and potentially offsetting the need for additional equipment to meet increasing demands.

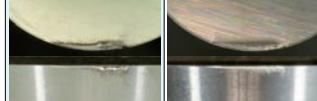

Chips break easily at higher cutting speeds vs the typically continuous chips of HRSA materials. The result is more efficient chip removal.

| 480 m/min               | Competitor's Whisker  | JX1   |
|-------------------------|---|---|
| 1st pass after 0.50 min |  |  |
| 2nd pass after 1.00 min | Impossible  |  |

## 2 Longer tool life

JX1/JX3's combination of High Hardness, Superior Thermal Conductivity and Improved Strength compared to Whisker ceramics results in significantly longer tool life when applied at typical Whisker ceramic speeds, feeds, and depth of cut.

| 330 m/min               | Competitor's Whisker  | JX1   |
|-------------------------|---|---|
| 1st pass after 0.75 min |   |  |
| 2nd pass after 1.50 min |  |  |

## 3 Works well on wide range of High Temperature Alloys

BIDEMICS has success on  
**Inconel 718**  
**Inconel 625**

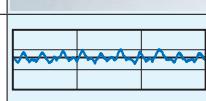

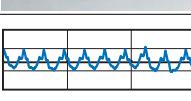

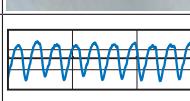

- 718 Plus      ● Rene104
- Rene41      ● Waspaloy
- Rene88      etc.

## 5 Speed up grooving operations

VGW style Grooving inserts are now available

## 4 Superior surface finish

|                  | JP2  | CBN   | Carbide   |
|------------------|--|---|---|
| Machined surface |  |  |  |
| Roughness        |  |  |  |
| Ra               | 0.64 µm  | 1.18 µm   | 2.75 µm   |
| Rz               | 3.36 µm  | 5.56 µm   | 9.64 µm   |
| Cutting speed    | 240 m/min  | ◀   | 35 m/min  |
| Feed             | 0.15 mm/rev  | ◀   | ◀   |
| Cycle time       | 3.3 min  | ◀   | 14.7 min  |
| Removed chip     | 48 cc  | ◀   | ◀   |

JP2's outstanding Wear Resistance and Notching Resistance results in work piece surface finishes consistently superior to either CBN or Carbide

## New diamond coating

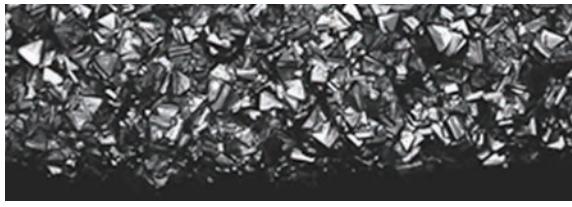

High purity and high hardness diamond coating are filmed minutely, so it has better wear resistance comparing to the past PCD tools.

## UC1

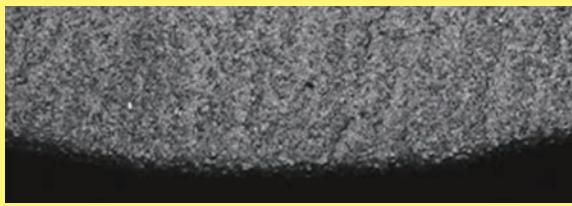

## For Carbon and Ceramic

Comparing to the past diamond coating,  
particle diameter is less than 1/10

Past diamond coating "UC2"

New diamond coating "UC1"

### Features

- **Improve wear resistance**

High purity and high hardness diamond coating are filmed minutely, so it has better wear resistance comparing to the past PCD tools.

- **High adherence efficiency**

NTK's original carbide base material and technical surface treatment development, acquires high adherence efficiency and can reduce the cause of unusual damage by coating exfoliate and able to cut more stable and long term.

- **Improve chip control • More shape variations**

Excellent chip-control of molded chipbreakers will be able to reduce the manufacturing lines stopping time.

- It is able to deal with NTK standard chip-breaker coated by UC1 as special manufactures!

- **High cost performance**

Increasing the number of corners, it contributes to the improvement of machining cost.

### [Case study]

| Application of carbon machining Carbon |              |
|--|--------------|
| Work material                          | : Carbon     |
| Cutting speed (m/min)                  | : 300        |
| Feed (mm/rev)                          | : 0.1 ~ 0.4  |
| Depth of cut (mm)                      | : 1.0        |
| Coolant                                | : DRY        |
| NTK : UC1                              | 4 pcs/corner |
| Competitor's diamond coating           | 3 pcs/corner |

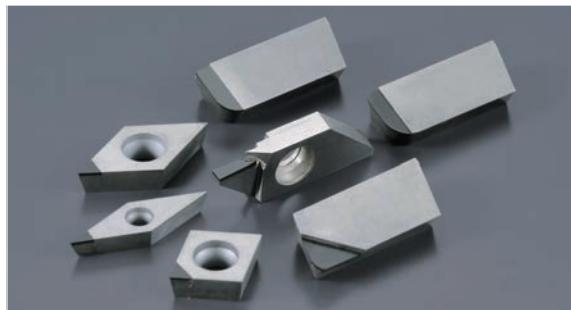

### [Carbon Ceramic ]

- **Improve wear resistance due to the adoption of sharp standard chipbreaker, and long expectancy**

- **Maximum 6 corner negative inserts are lined-up as well.**

*Contributed to cost reduction!*

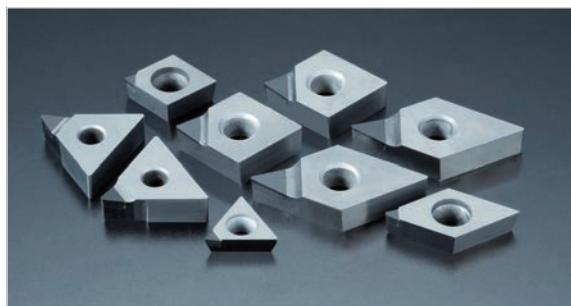

## Diamond sintered body, PCD

Diamond excels in deposition resistance with its low affinity and has excellent wear resistance with high hardness. But it also has a problem with fracture resistance due to lack of toughness. PCD is the material solving that problem without losing original characteristics of diamond by sintering fine grain diamond and generating polycrystallization. It enables much higher speed machining of nonferrous metals compared to carbide.

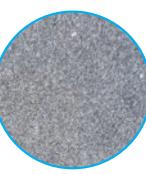

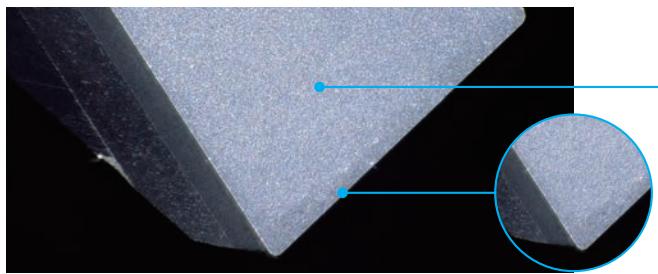

## PD1/PD2

For high speed machining of nonferrous metals!

### Features

- Elevated cutting speed when compared to carbide
- Recommended for cutting of aluminum and copper alloys with excellent deposition resistance
- Incorporates a very sharp cutting edge condition
- Pre-grinding and cutting-off types added in addition to the current milling cutter types

- Uses strictly selected diamond grains, the hardest of all material types
- Further improved strength by polycrystallizing dense diamond micro grains
- Excellent deposition resistance thanks to a lower affinity to nonferrous materials

- Sharp cutting edge attained
- Enables high precision and stable machining by control of potential built-up edge

Main applications for cutting: aluminum alloys, brass, copper alloys, graphite, ceramic compact, plastics

### Recommended cutting conditions

| Work material  | Cutting speed (m/min)            | Feed rate (mm/rev)      | Cutting oil |
|----------------|----------------------------------|-------------------------|-------------|
| aluminum alloy | Turning : ~ 350 Milling : ~ 4000 | Turning : ~ 0.12mm /rev |             |
| Copper alloy   | Turning : ~ 200 Milling : ~ 1000 | Milling : ~ 0.20mm /t   | WET         |

### Actual machining examples

| Machining of spool    |   | ● Work material : A6063 |
|-----------------------|---|-------------------------|
|                       | Conventional cutting tool                         | NTK                     |
| Material grade        | Competitor's brazed carbide grade cutting tool    | PD1                     |
| Cutting speed (m/min) | 100   | 200                     |

**PD1**

Shorter cycle time due to single pass machining.  
PD1 produces an excellent surface finish without deposition, higher efficiency and prolonged life resulted.

| Machining of spool       |                    |
|--------------------------|--------------------|
| Material grade           | : A6061            |
| Cutting speed (m/min)    | : 170              |
| Feed rate (mm/rev)       | : 0.06             |
| Depth of cut (mm)        | : 0.15             |
| Cutting oil              | : WET              |
| NTK : PD2                | 10,000 pcs./corner |
| Competitor's PCD product | 5,000 pcs./corner  |

PD2, excellent in wear resistance, achieved twice the life of competitor's product.

## High-pressure sintered compact

CBN grade inserts are composed mainly of CBN (Cubic Boron Nitride) particles with a special ceramic binder. The material has excellent cutting material properties including high hardness at normal and highly elevated temperatures, little chemical reactions with work materials, making it a material suitable for cutting tools

CBN inserts can be used for machining of cemented materials and high speed machining of cast iron

### B16

Best for high efficiency machining of cast iron !

#### Features

- Solid CBN with multiple corners available**
- The coating allows easy checking of used cutting edges**

| Material grade | Main binder                   | CBN content | Major application  |
|----------------|-------------------------------|-------------|--|
| <b>B16</b>     | TiN coating + special ceramic | 82%         | Roughing and finishing of normal cast iron at high speed/rolling rolls |

#### [Actual machining examples]

| Rough cutting of disc brake                                   |                 |
|---|-----------------|
| Work material : FC250   | <b>B16</b>      |
| Cutting speed (m/min) = 1,000                                 |                 |
| Feed rate (mm/rev) = 0.7                                      |                 |
| Depth of cut (mm) = 1.0                                       |                 |
| Cutting oil : WET   |                 |
| NTK : <b>B16</b>  | 800 pcs./corner |
| Competitor's CBN product                                      | 650 pcs./corner |
| B16 produced tool life of 1.2 times the competitor's product. |                 |

### B22

Best for machining of rolls of high hardness !

#### Features

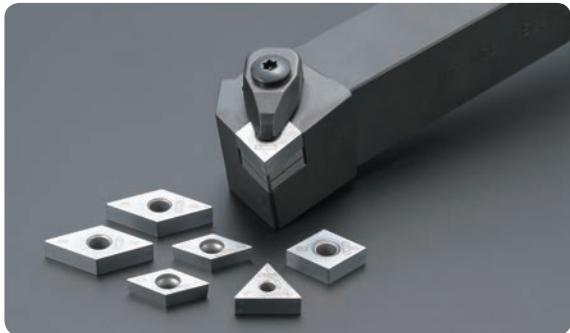

- Top layer of CBN with a carbide base offering multiple cutting edges**
- High hardness due to the use of the special binder**

| Material grade | Main binder | CBN content | Major application          |
|----------------|-------------|-------------|----------------------------|
| <b>B22</b>     | TiN-base    | 80%         | Turning of very hard rolls |

| Machining of roll                                      |            |
|--|------------|
| Work material : High chrome cast iron                  | <b>B22</b> |
| Cutting speed (m/min) = 60                             |            |
| Feed rate (mm/rev) = 0.2                               |            |
| Depth of cut (mm) = 2.0                                |            |
| Cutting oil : WET                                      |            |
| NTK : <b>B22</b>                                       | 2 passes   |
| Competitor's CBN product                               | 1 pass     |
| B22 produces twice the life of the competitor product. |            |

# EZ CUBE

CBN inserts offer high performance, low price and versatility !

## Features

- Seven grades available for different component materials
- Large range for various applications
- Multiple corners on both insert sides contributes to cost reduction

## NEW CBN (Cubic Boron Nitride)

### ● NTK EZCUBE™ / EZ CUBE

| Material grade | Main binder | CBN content | Major application   |
|----------------|-------------|-------------|---|
| B5K*           | TiC-base    | 50%         | Continuous to semi-interrupted machining of hardened steels<br>Finishing of ductile cast iron |

| NTK : <b>B30</b>   | 800 pcs./corner |
| Competitor's CBN product   | 500 pcs./corner |
| The life of B30 grade inserts was 1.6 times as long as the competitor's product. |                 |

NTK Ceramic Tools ensure highly efficient machining with their superior high temperature hardness, heat resistance and chemical stability

NTK offers various types of ceramic tool material (silicon-nitride-base, alumina-base and whisker-base) in many different shapes to meet the respective requirements of applications for higher efficiency and at higher cutting speed.

### ● Alumina-based Ceramics (White ceramics)

Can be used for high-speed finishing of normal cast iron thanks to its excellent wear resistance

### ● Alumina TiC-based ceramics (Black ceramics)

The toughness of this type is improved by adding TiC. Can be used for semi-finishing to finishing for normal cast iron and hardened materials

### ● Silicon nitride-based ceramics

Best for high-speed roughing of normal cast iron  
Machining up to  $V_c = 1,000\text{m/min}$  is possible

### ● Whisker-based ceramics

Wear resistance and fracture resistance are strengthened by adding SiC whisker  
First choice for machining of heat-resistant alloys and rolls made of cemented materials

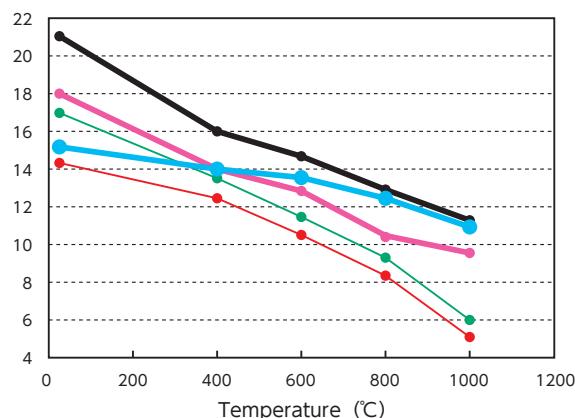

## ■ Advantages of ceramic cutting tools①

The material retains high hardness even at elevated temperatures !!

- Carbide P10
- Cermet
- Black ceramic HC2
- White ceramic HC1
- Silicon nitride-based SX6

Excellent wear resistance at high cutting speed !

[Hardness at high temperature by tool material]

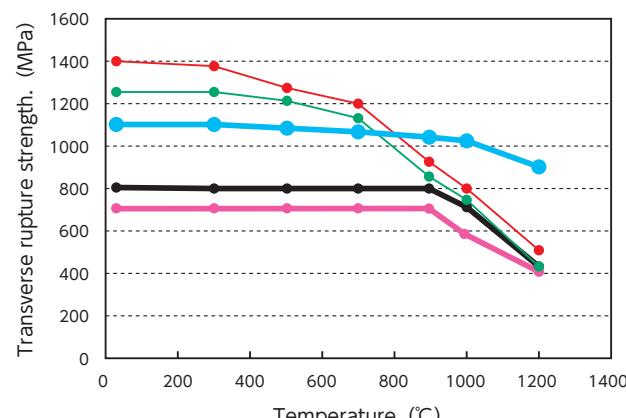

## ■ Advantages of ceramic cutting tools②

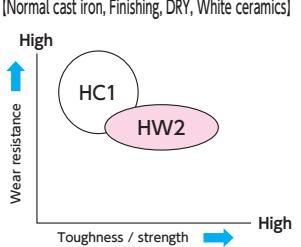

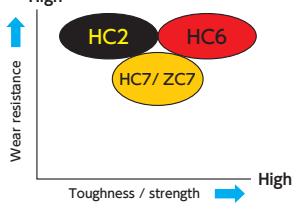

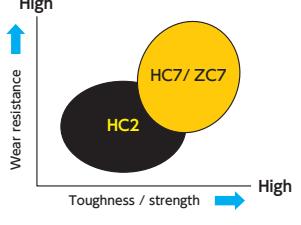

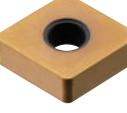

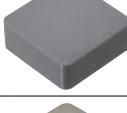

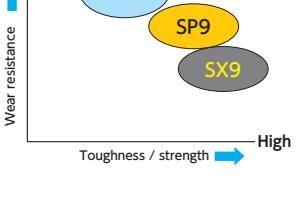

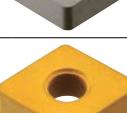

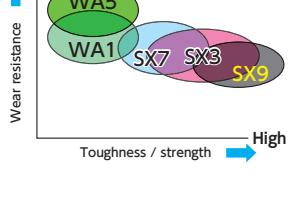

Material breaking strength is not greatly affected by high temperature conditions !!

- Carbide P10
- Cermet
- Black ceramic HC2
- White ceramic HC1
- Silicon nitride-based SX6

Stable machining is possible in the high speed range

[Breaking strength at high temperature by tool material ]

## Alumina-based ceramics (White ceramics)

[Normal cast iron, Finishing, Dry cutting, White ceramic]

- Characterized by high oxidation resistance as well as deposition resistance, these ceramics utilise alumina that is thermally and chemically stable. They are best suited for high-speed cutting applications where the temperature at the edges may become high.

## HC1

Ideal material for high-speed finishing of cast iron !

### Features

- Outstanding wear resistance for high-speed cutting of cast iron, especially semi-finishing or finishing without coolant**
- Most suitable for high-speed and high-temperature cutting thanks to the high heat resistance, using high-purity alumina as the main component**
- Usable even for finishing of special cast iron and for tube scarfing**

| Pulley machining   |                 |
|--|-----------------|
| Work material : FC250  | <b>HC1</b>      |
| Cutting speed (m/min) = 500                                  |                 |
| Feed rate (mm/rev) = 0.15 → 0.10 → 0.05                      |                 |
| Cutting oil : DRY  |                 |
| NTK : HC1  | 600 pcs./corner |
| Competitor's black ceramic                                   | 300 pcs./corner |
| HC1 achieved double the tool life of the competitor product. |                 |

| Tube Scarfing   |                |
|---|----------------|
| Work material : SPHT4   | <b>HC1</b>     |
| Cutting speed (m/min) = 70  |                |
| Depth of cut (mm) = 3.0   |                |
| Cutting width (mm) = 5.0  |                |
| Cutting oil : DRY   |                |
| NTK : HC1   | 70 min./corner |
| Competitor's black ceramic  | 30 min./corner |
| With its outstanding wear resistance characteristic, HC1 produced double the competitors tool life. |                |

# HW2

Highly tough alumina-based ceramic tool !

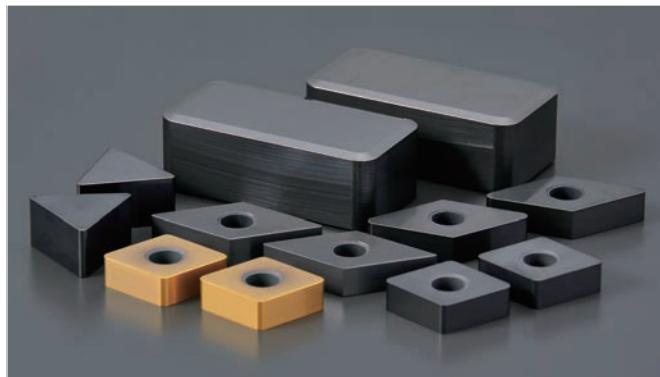

## Features

- Exhibits high strength and high toughness through the addition of zirconium to high purity alumina**
- Suitable for semi-interrupted finishing applications for normal cast iron and roughing and finishing of special cast iron (such as lining materials)**

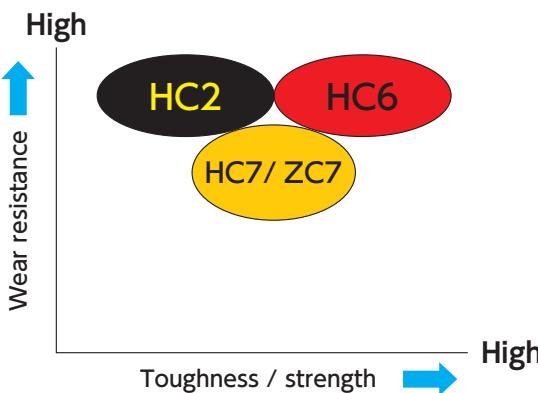

| Brake Disc machining  |                 |
|---|-----------------|
| Work material : FC250   | <b>HW2</b>      |
| Cutting speed (m/min) = 359   |                 |
| Feed rate (mm/rev) = 0.3  |                 |
| Depth of cut (mm) = 0.5   |                 |
| Cutting oil : DRY   |                 |
| NTK : <b>HW2</b>  | 130 pcs./corner |
| Competitor's black ceramic  | 65 pcs./corner  |
| HW2 achieved twice the tool life of the competitor's product, due to its superior strength. |                 |

| Cylinder liner machining   |                |
|--|----------------|
| Work material : special cast iron  | <b>HW2</b>     |
| Cutting speed (m/min) = 600  |                |
| Feed rate (mm/rev) = 0.32  |                |
| Depth of cut (mm) = 3.0  |                |
| Cutting oil : DRY  |                |
| NTK : <b>HW2</b>   | 70 pcs./corner |
| Competitor's black ceramic   | 30 pcs./corner |
| HW2 produced finished surfaces of excellent quality in addition to the life being double that of the competitor's product. |                |

## Alumina TiC-based ceramics (Black ceramics)

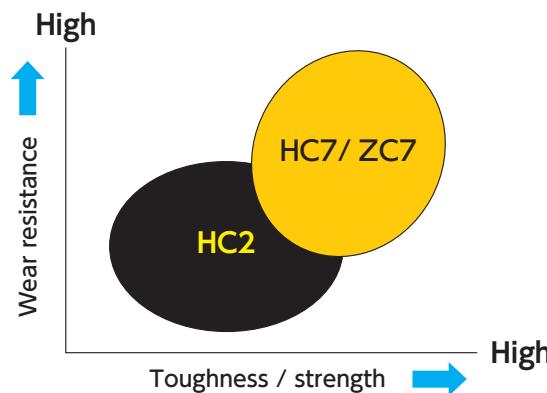

[Normal cast iron, Finishing, WET, Black ceramic]

This material group are alumina TiC-based ceramics strengthened by adding hard carbide to high-purity alumina. These tool materials exhibit excellent performance in high-speed finishing of cast iron, applications under either WET or DRY cutting, or even in partially interrupted machining, having improved hardness and strength. Excellent at finishing of hardened materials due to the high hardness and low plasticity in high temperature ranges.

### Machining of hardened materials

## HC2

The standard tool material for machining cast iron and hardened materials !

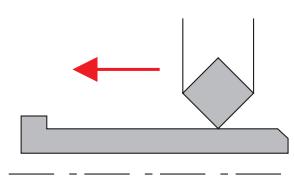

### Features

- Excellent performance in machining of cast iron and hardened materials thanks to its high hardness and low plasticity in high temperature ranges**

| Machining of lining material |                           | ● Work material : FC material |
|------------------------------|---------------------------|-------------------------------|
|                              | Conventional cutting tool | NTK                           |
| Material grade               | Competitor's carbide      | HC2                           |
| Cutting speed (m/min)        | 400                       | 600                           |
| Feed rate (mm/rev)           | 0.50                      | ◀                             |
| Depth of cut (mm)            | 0.70                      | ◀                             |
| Cutting oil                  | DRY                       | ◀                             |
| Life (pcs./corner)           | 40                        | 110                           |

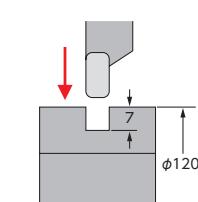

### HC2

HC2 produced 1.35 times higher machining efficiency and almost 3 times the tool life of the competitor's product.

| Machining of roller bearing |                           | ● Work material : SNCM (HRC58) |
|-----------------------------|---------------------------|--------------------------------|
|                             | Conventional cutting tool | NTK                            |
| Material grade              | Competitor's carbide      | HC2                            |
| Cutting speed (m/min)       | 23                        | 112                            |
| Feed rate (mm/rev)          | 0.06                      | 0.06                           |
| Cutting oil                 | DRY                       | ◀                              |
| Life (No. of grooves)       | 4                         | 6                              |

### HC2

HC2 produced approximately twice the machining efficiency and 1.5 times longer tool life than the competitor's product.

# ZC7

For machining of hardened parts with varying levels of hardness!

## Features

- Covers a wide range of hardened materials (HRC45 – 60)**
- ZC7 coated with TiN provided as standard stocked product**
- Inserts are available with both wiper facets and chipbreakers to further improve machining efficiency**

| Gear cutting   |                |
|--|----------------|
| Work material : Case carburizing steel   | <b>ZC7</b>     |
| Cutting speed = 200m/min   |                |
| Feed rate = 0.20mm/rev   |                |
| Depth of cut = 0.70mm  |                |
| Cutting oil : DRY  |                |
| NTK : <b>ZC7</b><br>(w/ 4 corners)   | 70 pcs./corner |
| Competitor's CBN<br>(w/ 2 corners)   | 50 pcs./corner |
| ZC7 realized significant cost reduction, through longer tool life as compared with the competitor's CBN product. |                |

# HC6

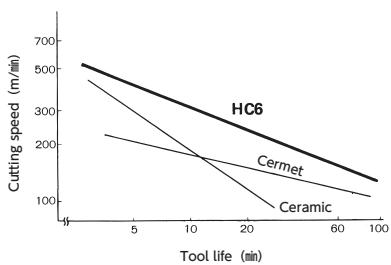

For machining of ductile cast iron!

## Features

- World's first TiC-based ceramic put into practical use**
- Ideal for semi-finishing and finishing of ductile cast iron at low to high-speed levels**
- Also produces excellent dimension stability in machining of cast iron under WET cutting conditions**

### Cutting performance : V-T curve

### Cutting conditions

Work material : FCD550(HB240 ~ 260)

Insert : SNGN120408

Depth of cut : 0.5mm

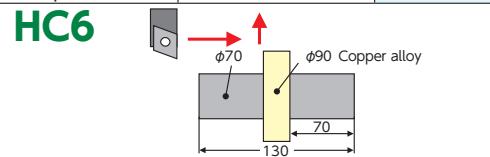

Feed rate : 0.2mm/rev

Reference life : Amount of VB wear=0.4mm

Gear cutting • Work material : Equivalent to FCD450 + copper alloy

|                       | Conventional cutting tool | NTK |
|-----------------------|---------------------------|-----|
| Material grade        | Competitor's cermet       | HC6 |
| Cutting speed (m/min) | 300                       | ↔   |
| Feed rate (mm/rev)    | 0.05                      | ↔   |
| Depth of cut (mm)     | 0.5                       | ↔   |
| Cutting oil           | WET                       | ↔   |
| Life (pcs/corner)     | 20                        | 50  |

## HC6

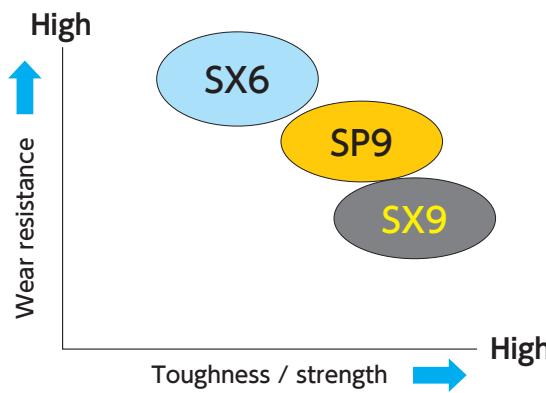

HC6 produced remarkably long life, less dimensional variations and better wear resistance compared with the competitor's product.

## Silicon nitride-based ceramics

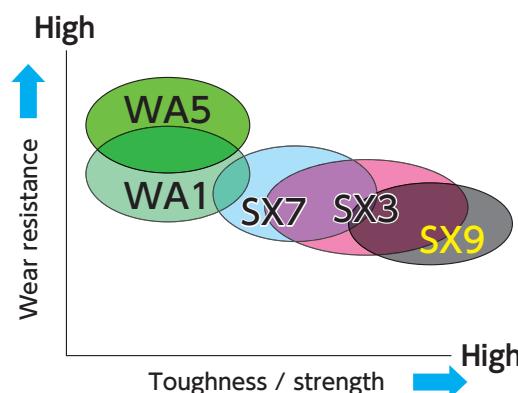

The silicon nitride-based ceramics have approximately twice the fracture toughness of alumina-based, having high fracture resistance equal to some carbide tools. These grades allow efficient machining in high speed ranges where traditional ceramic tools were not able to perform well, including milling of cast iron and interrupted cutting in poor surface conditions.

### [Normal cast iron, Roughing]

### [High Temperature Alloy, Roughing]

## NEW SX3

Best balance of toughness and wear resistance

| Rough turning (Rene130) with Scale |                             |
|------------------------------------|-----------------------------|
| Shape : SNGN190724                 | Competitor's SiAlON Ceramic |
| Cutting speed (m/min) : 115        | SX3                         |
| Feed (mm/rev) : 0.15               |                             |
| Various depth of cut               |                             |
| WET                                |                             |
| NTK : SX3                          | 10 min                      |
| Competitor's SiAlON                | 10 min * Was chipping a lot |

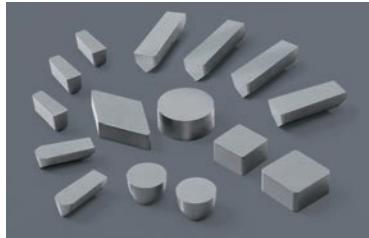

### Features

- Excellent wear resistance and toughness.  
Wide range of HRSA machining applications: Rough turning with scale ~ semi-finish turning.
- Able to machine even the newest generation of HRSA work materials (like Rene) as well as today's most common HRSA materials; such as Inconel 718.
- Able to mill with high efficiency.

| Grade | Work material        | Application | Purpose                 | Cutting speed (m/min) | Feed (mm/rev) | Depth of cut (mm) | DRY | WET |

# SX7

## Wear resistant SiAlON ceramic

### Features

- Better notching resistance compared to Whisker ceramics  
No need to program ramping
- Better flank wear resistance compared to other SiAlON ceramics  
Superior performance vs. whisker ceramics under same conditions—even higher productivity at higher feed rates
- Excellent thermal shock resistance  
High speed milling can be performed at 3000SFM or higher

| Turbine case (Waspaloy semi finish) |                  |
|-------------------------------------|------------------|
| Shape : RPGX120700                  |                  |

| Feed(mm/rev) : 0.3                  |                  |
| Various depth of cut                |                  |
| WET                                 |                  |
| NTK : SX7                           | 7.2 min          |
| Competitor's Whisker ceramic        | 5.3 min * Broken |

# SX9

## Best grade for roughing Inco 718 with scale

### Features

- Excellent notch wear resistance
- Better flank wear resistance compared to competitor's silicon nitride ceramics
- Superior toughness compared to Whisker-reinforced ceramics
- Best thermal shock resistance
- Best grade for roughing Inco 718 with scale

| Housing (Inco 718 with scale) |                     |
|-------------------------------|---------------------|
| Comp. Whisker                 | SX9                 |
| Shape                         | RCGX120700          |
| Cutting speed (m/min)         | 180                 |
| Feed (mm/rev)                 | 0.13                |
| Depth of cut (mm)             | 2.5                 |
| WET                           |                     |
| NTK : SX9                     | * High productivity |
| Competitor's Whisker ceramic  |                     |

# SX6

## Premium Silicon Nitride

### Features

- Excellent wear resistance in applications where notch wear appears
- Stable tool life in the applications where thermal shock resistance is required : such as WET machining or milling
- Long tool life and high productivity at high cutting speed

| Brake rotor                          |         |
|--------------------------------------|---------|
| Gray cast iron                       |         |
| Cutting speed(m/min):1,100           |         |
| Feed(mm/rev) : 0.5                   |         |
| Depth of cut (mm):2.0 ~ 3.0          |         |
| WET                                  |         |
| NTK : SX6                            | 75 pcs  |
| Competitor's silicon nitride ceramic | 50a pcs |

# SP9

## High Speed machining with low cutting forces

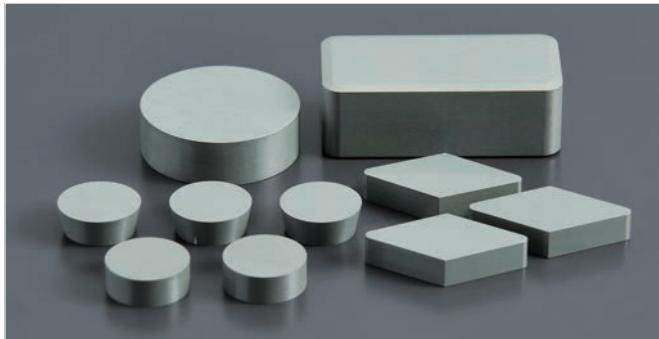

### Features

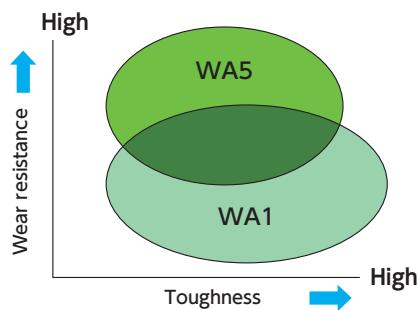

- Excellent wear-resistance and chipping resistance with CVD coated high-strength silicon nitride-based ceramic
- Achieves lower tool pressure with minimal edge preparation
- Also usable for finishing

| Brake rotor                  |         |
|------------------------------|---------|
| Gray cast iron               |         |

**WA5**

WA5 produced twice the tool life of the competitor's product.

# WA1

Ultra high-speed machining of heat-resistant alloys and cast iron !

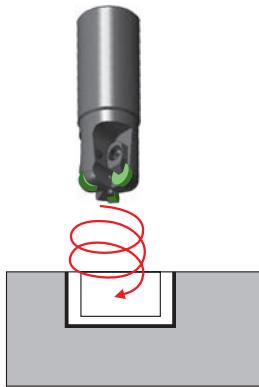

## Features

- Excellent thermal shock resistance enables to machine high temperature alloy with high speed  $v_c = \sim 500\text{m/min}$**
- Superior wear resistance allows high speed cutting  $v_c = \sim 1,000\text{m/min}$  on cast iron.**
- Wet machining is feasible by high thermal shock resistance**

[Actual machining example : Gas turbine material]

| Case machining        |                                      | ● Work material : Inconel 718 |
|-----------------------|--------------------------------------|-------------------------------|
|                       | Conventional cutting tool            | <b>NTK</b>                    |
| Material grade        | Competitor's carbide end mill cutter | WA1                           |
| Holder                | Solid                                | RPIW125E125R03                |
| Cutting speed (m/min) | 50                                   | 800                           |

## WA1

WA1 produced better machining efficiency when compared to the competitor's product.

## Micro-grain Carbide and PVD/CVD-coated Carbide

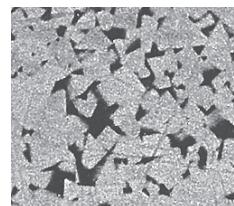

### Excellence in precision machining and machining of hard-to-cut materials

These material grades use WC micro-grain carbide, the hard layer of which is granulated to a micro size  $1\text{ }\mu\text{m}$  as the substrate. Furthermore, the substrate is coated by the PVD method with TiN, TiCN, and/or TiAlN. The end results are materials that are suitable for precision machining and machining of difficult-to-cut materials. Inserts in these grades are tougher and harder than carbide and come with precision sharp cutting edges. They even have superior toughness and sharper cutting edges than ultra micro-grain carbide grades, with excellent wear resistance and thermal crack resistance.

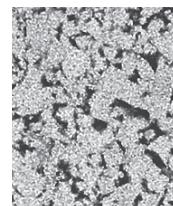

#### Carbide grade

General carbide structure

Micro-grain carbide structure

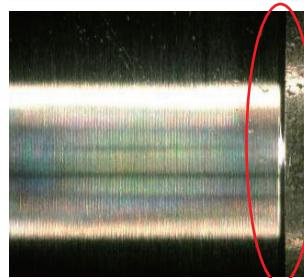

Super micro-grain carbide structure

### The result of intensive research and development for improving carbide grades

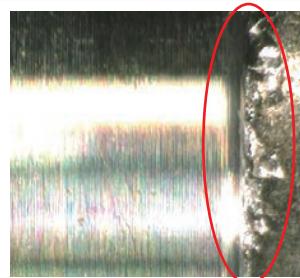

The NTK carbide grade series shows very stable performance under a wide range of conditions. NTK uses micro-grain carbide substrate with a balance of wear resistance and toughness.

#### Features Superior cutting performance

No burrs

Machined with NTK insert with a sharp cutting edge

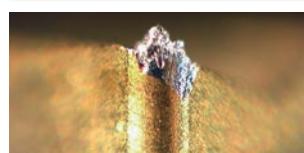

Burr

Machined with a competitor's product with a honed cutting edge

### Relentless pursuit of better cutting performance

NTK takes pride in its carbide grade series. Their outstanding cutting performance is due to the grinding of ultra sharp cutting edges. Sharper cutting edges provide for better burr control, lower tool pressure, holding tighter tolerances and reducing work hardening.

#### Features Precise analysis on insert wear patterns

Build-up edge

Chipping / fracture

Flank wear

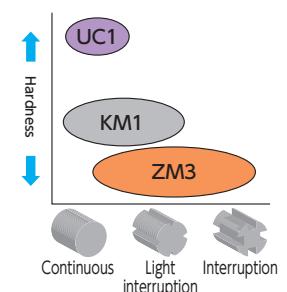

Wear on rake

### Continuous research on insert tool life

Damage to insert cutting edges varies depending on the machining process and the work material. There are various types of coatings that reduce such damage to prolong the tool life. NTK carbide series offer various coatings developed to improve their resistance characteristics including wear, fracture, adhesion and oxidation, by utilizing state of the art technology.

| Grade / Coating |   | Applications / Features |   | Physical properties* |                 |                         |                        |  |                                 | Applications map        |

\*For products with coating, the values of the base material are indicated.

**Aluminum / Brass**

## NEW ST4

**Best grade for stainless steel**

### Features

- Best grade for SUS304 thanks to New ST coating
- Excellent adhesion and wear resistance

| Best for   | Optimized for                            | Excellent in        |
|--|--|---------------------|
| <ul style="list-style-type: none"> <li>● Stainless steels</li> </ul> | Conventional lathes<br>Swiss-type lathes | Adhesion resistance |

## DM4

**Excellent oxidation resistance**

### Features

- Best oxidation resistance for high temperature machining
- Optimized for Conventional / Swiss-type lathes

| Best for  | Optimized for                            | Excellent in                 |
|---|--|------------------------------|
| <ul style="list-style-type: none"> <li>● Titanium alloys</li> <li>● Stainless steels</li> <li>● Alloy steels</li> <li>● Carbon steels</li> <li>● Heat resistant alloys</li> </ul> | Conventional lathes<br>Swiss-type lathes | Oxidation<br>Heat resistance |

## DT4

**Excellent heat resistance for Swiss-type lathes**

### Features

- Excellent oxidation resistance for Swiss-type lathes

| Best for  | Optimized for     | Excellent in                 |
|---|-------------------|------------------------------|
| <ul style="list-style-type: none"> <li>● Titanium alloys</li> <li>● Stainless steels</li> <li>● Alloy steels</li> <li>● Carbon steels</li> <li>● Heat resistant alloys</li> </ul> | Swiss-type lathes | Oxidation<br>Heat resistance |

## QM3

**Superb wear resistance and fracture resistance in interrupted cutting**

### Features

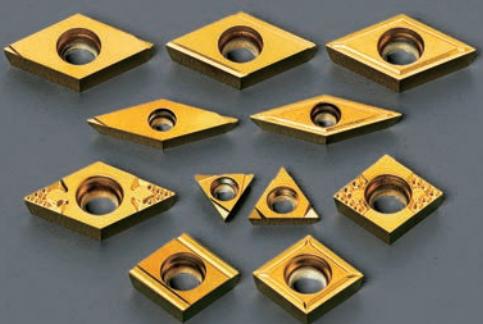

- Excellent toughness and wear resistance for wide speed range
- Stable interrupted machining of steel

| Best for   | Optimized for                            | Excellent in    |
|--|--|-----------------|
| <ul style="list-style-type: none"> <li>● Carbon steels</li> <li>● Stainless steels</li> <li>● Alloy steels</li> <li>● Heat resistant alloys</li> </ul> | Swiss-type lathes<br>Conventional lathes | Wear resistance |

# TM4

Next generation standard insert grade for Swiss-type lathes

## Features

- Excellent dimensional stability and tool life thanks to triple titanium layers with excellent adherence to insert substrate

| Best for  | Optimized for     | Excellent in |
|---|-------------------|--------------|
| <ul style="list-style-type: none"> <li>Carbon steels</li> <li>Stainless steels</li> <li>Alloy steels</li> </ul> | Swiss-type lathes | Balance      |

# VM1

High precision machining of small diameter parts

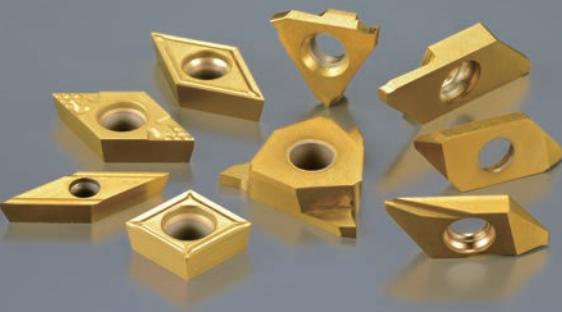

## Features

- Especially for machining free cutting steels (SUM materials)
- For high-precision machining with longer tool life even in the high-speed machining range

| Best for  | Optimized for     | Excellent in   |
|---|-------------------|----------------|
| <ul style="list-style-type: none"> <li>Carbon steels</li> <li>Stainless steels</li> <li>Alloy steels</li> </ul> | Swiss-type lathes | Edge sharpness |

# ZM3

The best selling grade for Swiss-type lathes

## Features

- Stabilizes machining dimensions thanks to the coating being firmly adhered to the substrate
- A wide range of cutting tools in various sizes available for Swiss-type lathes

| Best for   | Optimized for                            | Excellent in        |
|--|--|---------------------|
| <ul style="list-style-type: none"> <li>Carbon steels</li> <li>Stainless steels</li> <li>Alloy steels</li> <li>Non-ferrous materials</li> </ul> | Swiss-type lathes<br>Conventional lathes | Adhesion resistance |

# AC3

Developed for solid carbide endmill

## Features

- Newly developed for Carbide endmill
- Excellent sharpness and great wear resistance

## KM1

Good for non-ferrous materials like PEEK, Brass, Aluminum and Copper

### Features

- Very sharp cutting edges with uncoated Micro-grain carbide
- Excellent adhesion resistance because of mirror-finish
- A wide range of cutting tools in various types available for Swiss-type lathes

#### Best for

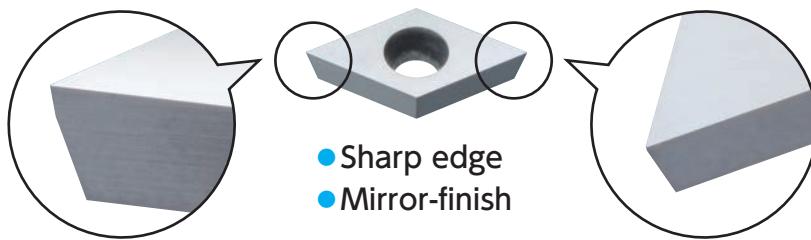

- Aluminium
- Plastic (PEEK)
- Non-ferrous materials

#### Optimized for

Swiss-type lathes

#### Excellent in

Edge sharpness

## CP1

For roughing cast iron and ductile cast iron

### Features

- High wear resistance achieved by laminating thick film TiCN layer and Al<sub>2</sub>O<sub>3</sub> layer as the coating; Great for cast iron cutting even in high-speed range
- Excellent deposition resistance due to our original surface treatment
- Can also be used for machining ductile cast iron

#### Best for

- Ductile cast iron
- Gray cast iron

#### Optimized for

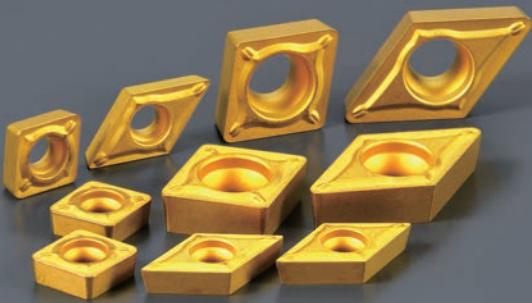

Conventional lathes

#### Excellent in

Wear resistance

## CP7

For roughing at high speed in steel machining !

### Features

- High wear resistance and fracture resistance achieved by multi-layer coating of the base material by CVD method; used for a wide range of cutting conditions
- Recommended for high-speed machining of alloy steel and general steels
- Best for machining of automotive components on automatic lathes

#### Best for

- High-speed machining of alloy steels

#### Optimized for

Conventional lathes

#### Excellent in

Wear resistance

## PVD Coatings for Turning

### NEW ST4

### ST-Coat

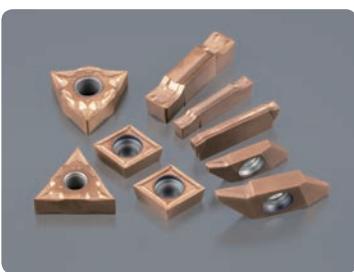

**Best grade for Stainless Steel**

- Stainless steel

### DM4

### DM-Coat

**Best heat resistance**

- Heat resistant alloy
- Stainless steel
- Hardened material

### QM3

### Q-Coat

**Best wear resistance**

- Stainless steel
- Carbon steel
- Alloy steel

### DT4

### DT-Coat

**Best balance of heat resistance and sharp edges**

- Titanium alloy
- Heat resistant alloy
- Stainless steel
- Hardened material

### TM4

### TM-Coat

**Best balance of wear resistance and adhesion resistance**

- For small part machining in general

### VM1

### V-Coat

**Best edge sharpness**

- Titanium alloy
- Non-ferrous material
- Stainless steel
- Plastic

### ZM3

### Z-Coat

**Best adhesion resistance**

- General purpose machining

# ISO / INCH Insert Nomenclature

## ① Code for shape

| Classification                           | Code | Shape                | Apex angle (degree) | Symbol |
|--|------|----------------------|---------------------|--------|
| Regular polygons                         | H    | Regular hexagon      | 120                 | ○      |
|  | O    | Regular octagon      | 135                 | ○      |
|  | P    | Regular pentagon     | 108                 | ○      |
|  | S    | Square               | 90                  | □      |
|  | T    | Equilateral triangle | 60                  | △      |
| Rhomboids and equilateral unequal-angles | C    |                      | 80                  |        |
|  | D    |                      | 55                  |        |
|  | E    | Rhomboids            | 75                  | ◇      |
|  | F    |                      | 50                  |        |
|  | M    |                      | 86                  |        |
|  | V    |                      | 35                  |        |
|  | W    | Hexagon              | 80                  | △      |
| Rectangles                               | L    | Rectangle            | 90                  | □      |
| Parallelograms                           | A    |                      | 85                  |        |
|  | B    | Parallelograms       | 82                  | □      |
|  | K    |                      | 55                  |        |
| Circles                                  | R    | Circle               | —                   | ○      |

Note : The smaller of the apex angles is used.

## ③ Codes for accuracy

| Code | Diameter of inscribed circle d (mm) | Thickness s (mm) | Corner height m (mm) |
|------|-------------------------------------|------------------|----------------------|
| A*   | ± 0.025                             | ± 0.025          | ± 0.005              |
| F*   | ± 0.013                             |                  |                      |
| C*   | ± 0.025                             |                  | ± 0.013              |
| H    | ± 0.013                             |                  |                      |
| E    | ± 0.025                             | ± 0.13           | ± 0.025              |
| G    |                                     |                  |                      |
| J*   | ± 0.05 ~ ** ± 0.13                  | ± 0.025          | ± 0.005              |
| K*   |                                     |                  | ± 0.013              |
| L*   |                                     |                  | ± 0.025              |
| M    | ± 0.05 ~ ** ± 0.13                  | ± 0.13           | ± 0.08 ~ ** ± 0.18   |
| N    |                                     | ± 0.025          |                      |
| U    | ± 0.08 ~ ** ± 0.25                  | ± 0.13           | ± 0.13 ~ ** ± 0.38   |

Notes : The asterisk (\*) indicates that the accuracy range is basically applied to inserts equipped with a flat drag. The double asterisk (\*\*) indicates that the accuracy range is determined by the size of the insert.

Tolerances for each insert size Except for inserts with 55, 50 or 35 degrees in apex angle

| Diameter of inscribed circle d (mm) | Inscribed circle diameter tolerance | Corner height tolerance |              |         |
|-------------------------------------|-------------------------------------|-------------------------|--------------|---------|
|                                     | Class J, L, K, M, N                 | Class U                 | Class M or N | Class U |
| 6.35<br>9.525                       | ± 0.05                              | ± 0.08                  | ± 0.08       | ± 0.13  |
| 12.70                               | ± 0.08                              | ± 0.13                  | ± 0.13       | ± 0.20  |
| 15.875<br>19.05                     | ± 0.10                              | ± 0.18                  | ± 0.15       | ± 0.27  |
| 25.40                               | ± 0.13                              | ± 0.25                  | ± 0.18       | ± 0.38  |

The tolerances for class M inserts with 55 degrees in apex angle are as follows

| Diameter of inscribed circle d (mm) | Inscribed circle diameter tolerance (mm) | Corner height tolerance (mm) |
|-------------------------------------|--|------------------------------|
| 6.35<br>9.525                       | ± 0.05                                   | ± 0.11                       |
| 12.70                               | ± 0.08                                   | ± 0.15                       |
| 15.875<br>19.05                     | ± 0.10                                   | ± 0.18                       |

Note : The accuracy range of "m" can be spread for inserts with apex angles smaller than 55 degrees.

## Type of insert material

|                                 |                    | Partially cylindrical<br>Single-sided: 40 - 60 deg | None         |         |
|                                 |                    |  | Single-sided |         |
|                                 |                    | Partially cylindrical<br>Double-sided: 40 - 60 deg | None         |         |
|                                 |                    |  | Double-sided |         |
| B<br>H<br>C<br>J                | Yes                | Partially cylindrical<br>Single-sided: 70 - 90 deg | None         |         |
|                                 |                    |  | Single-sided |         |
|                                 |                    | Partially cylindrical<br>Double-sided: 70 - 90 deg | None         |         |
|                                 |                    |  | Double-sided |         |
| X                               | —                  | —  | —            | —       |

Note : Only the normal series is to be used for the metric system. Always use code X for scalene inserts. However, X must not be used for inserts of shapes not defined in the table (1) above.

| For small-size series |                    |              |
|-----------------------|--------------------|--------------|
| Code                  | Provision of holes | Chipbreaker  |
| E<br>S<br>L           | No                 | None         |
|                       |                    | Single-sided |
|                       |                    | Double-sided |
| D<br>P<br>K           | Yes                | None         |
|                       |                    | Single-sided |
|                       |                    | Double-sided |
| X                     | —                  | —            |

Note : Use the smaller size series for the inch system when inscribed circle diameter is 7.94 mm or less. However, use normal series only when the diameter is 6.35 mm giving priority to the small-size series.

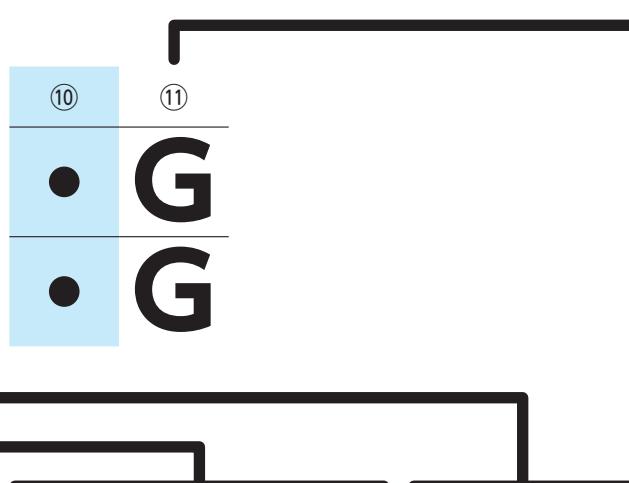

| For corner R                |             |               |
|-----------------------------|-------------|---------------|
| Corner-R nominal value (mm) | Inch system | Metric system |
| Sharp corner                |             |               |
| r <sub>E</sub> : 0.2        | Y           | 02            |
| 0.4                         | 1           | 04            |
| 0.8                         | 2           | 08            |
| 1.2                         | 3           | 12            |
| 1.6                         | 4           | 16            |
| 2.0                         | 5           | 20            |
| 2.4                         | 6           | 24            |
| 3.2                         | 8           | 32            |
| Other radii                 |             | X             |
| For circular inserts        | 0           | 00*           |
|                             |             | M0*           |

Notes : "00" (double zero) is used for insert circle diameter indicated in inches. "M0" is used for insert circle diameter indicated in millimeters.

## ⑤Codes for cutting edge lengths or for inscribed circle diameters ⑥Codes for thickness

| Diameter of inscribed circle d (mm) | Inch system   |                   | Metric system |    |    |    |    |    |    |    |    |    |    |    |    |

## ⑧Codes for major cutting edges

|                                       |   |
|---------------------------------------|---|
| Without honing (Tool nose processing) | F |
| Angular honing                        | T |
| Round honing                          | E |
| Angular honing + round honing         | S |
| Special honing                        | K |
| Special honing + round honing         | P |

## ⑨Codes for left/right handed inserts

| Type          | Code |
|---------------|------|
| Right-handed  | R    |
| Left-handed   | L    |
| Not specified | N    |

## ⑪Codes for chipbreaker shapes

### Parallel-honing type

| Code | W   | $\theta^\circ$ |
|------|-----|----------------|
| A    | 1.0 | 14             |
| B    | 1.5 | 14             |
| C    | 2.2 | 14             |
| D    | 2.8 | 10             |
| E    | 3.5 | 10             |

### Type N (Double-positive type)

| Code | W   |
|------|-----|
| N1   | 1.5 |
| N2   | 2.2 |

### Type P (Angle type)

| Code | W    |
|------|------|
| P1   | 0.9  |
| P2   | 1.25 |

### Full-arc embossed type

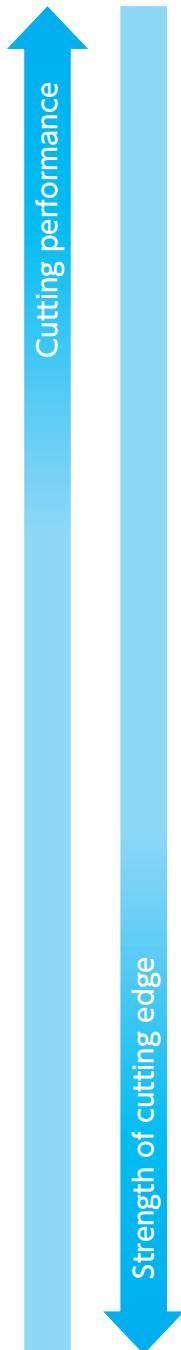

| Code | W   |
|------|-----|
| F    | 1.5 |
| G    | 2.2 |
| H    | 2.8 |

Part No. Designation Code for Inserts → Refer to page E2.

① Codes for major cutting edges

Cutting edge treatment : Chamfering or honing of the cutting edge in order to strengthen the edge or to adjust the cutting performance

|                                  | Code | Shape |
|----------------------------------|------|-------|
| Sharp edge                       | F    |       |
| Round honing                     | E    |       |
| Angular grinding                 | T    |       |
| Angular grinding + round honing  | Z    |       |
|                                  | S    |       |
| 2-step chamfering + round honing | P    |       |

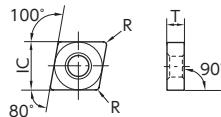

## ● Codes for cutting edges and the shapes

| Code   | Shape of the cutting edge  |
|--------|--|
| E002   | Round honing with R = 0.02   |
| E004   | Round honing with R = 0.04   |
| E007   | Round honing with R = 0.07   |
| EX0004 | Round honing with R = 0.02   |
| S01015 | Chamfering 0.10 mm x 15 deg. + round honing with R = 0.04 (*R0.03) |
| S01020 | Chamfering 0.10 mm x 20 deg. + round honing with R = 0.04 (*R0.03) |
| S01325 | Chamfering 0.13 mm x 25 deg. + round honing with R = 0.04 (*R0.03) |
| S01535 | Chamfering 0.15 mm x 35 deg. + round honing with R = 0.04 (*R0.03) |
| S02025 | Chamfering 0.20 mm x 25 deg. + round honing with R = 0.04 (*R0.03) |
| T00320 | Chamfering 0.03 mm x 20 deg.                                       |
| T00520 | Chamfering 0.05 mm x 20 deg.                                       |
| T00525 | Chamfering 0.05 mm x 25 deg.                                       |
| T00820 | Chamfering 0.08 mm x 20 deg.                                       |
| T01015 | Chamfering 0.10 mm x 15 deg.                                       |
| T01020 | Chamfering 0.10 mm x 20 deg.                                       |
| T01025 | Chamfering 0.10 mm x 25 deg.                                       |
| T01515 | Chamfering 0.15 mm x 15 deg.                                       |
| T01520 | Chamfering 0.15 mm x 20 deg.                                       |
| T01525 | Chamfering 0.15 mm x 25 deg.                                       |
| T02020 | Chamfering 0.20 mm x 20 deg.                                       |
| T02025 | Chamfering 0.20 mm x 25 deg.                                       |
| Z01015 | Chamfering 0.10 mm x 15 deg. + round honing with R = 0.02          |
| Z01025 | Chamfering 0.10 mm x 25 deg. + round honing with R = 0.02          |
| Z01030 | Chamfering 0.10 mm x 30 deg. + round honing with R = 0.02          |
| Z01520 | Chamfering 0.15 mm x 20 deg. + round honing with R = 0.02          |
| Z02025 | Chamfering 0.20 mm x 25 deg. + round honing with R = 0.02          |

K28

\* Inserts having 01M, 02M or 04M as the R code can be used for machining when the component drawing specifies that the radius is less than R=0.1, R=0.2 or R=0.4 respectively.

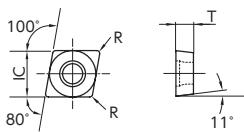

● : Standard stock   ● : New standard stock   ■ : Scheduled to be produced by order   ★ : Standard stock (Specified)

※2 The specifications of CL chipbreaker are slightly different from the above dimensions, but it has no problem for machining.

## ⟨80 degree Rhombic Positive type⟩

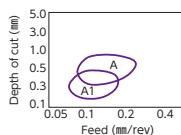

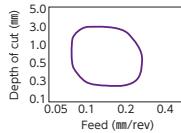

| Item Number    | IC   | T    | Relief angle |

\*Note: NTK WP style inserts have a wiper facet design.  
The insert has a 0.3mm flat on the cutting edge when the insert is set into the toolholder.  
The flat on the cutting edge ensures a superior surface when feed rates are increased.  
WP style inserts can be used in toolholders: SDJC, Y-SDJC, CH-SDUCL and DS-SDUL.

\*Note: NTK WP style inserts have a wiper facet design.  
The insert has a 0.3mm flat on the cutting edge when the insert is set into the toolholder.  
The flat on the cutting edge ensures a superior surface when feed rates are increased.  
WP style inserts can be used in toolholders: STAC

G56

G33

A graph showing Depth of cut (mm) on the y-axis (ranging from 0.1 to 5.0) versus Feed (mm/rev) on the x-axis (ranging from 0.05 to 0.4). The data points form a horizontal rectangle at a depth of approximately 1.1 mm.

| Feed (mm/rev) | Depth of cut (mm) |
|---------------|-------------------|
| 0.05          | 1.1               |
| 0.1           | 1.1               |
| 0.2           | 1.1               |
| 0.4           | 1.1               |

- \* Inserts having 01M, 02M or 04M as the R code can be used for machining when the component drawing specifies that the radius is less than R=0.1, R=0.2 or R=0.4 respectively.

\*Note: NTK WP style inserts have a wiper facet design.  
The insert has a 0.2mm flat on the cutting edge when the insert is set into the toolholder.  
The flat on the cutting edge ensures a superior surface when feed rates are increased.  
WP style inserts can be used in toolholders: SVJC

(Tightening Torque 7.5Nm. Red part is clamped well.)

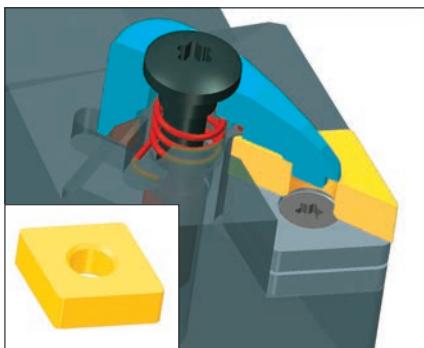

### Features

- Three clamping configurations available with one toolholder just by changing a clamp
- Clamp screw also accessible from bottom of the toolholder Dramatically improved accessibility when using toolholder up-side down

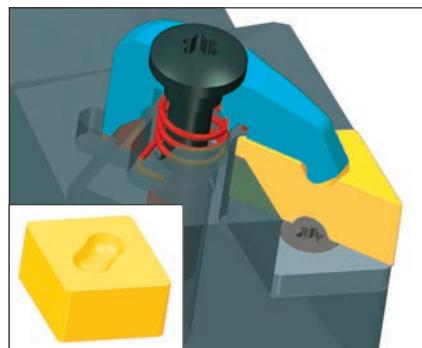

### Clamp for various style of inserts available

Three types of inserts can be set by only changing the clamp.

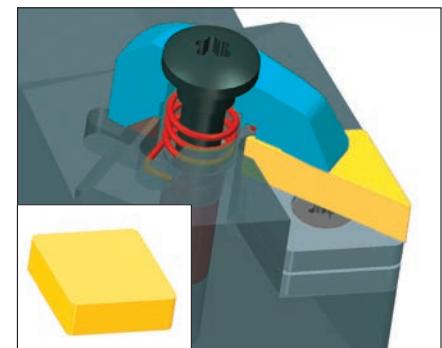

Double-clamp type

Dimple-clamp type

Clamp-on type

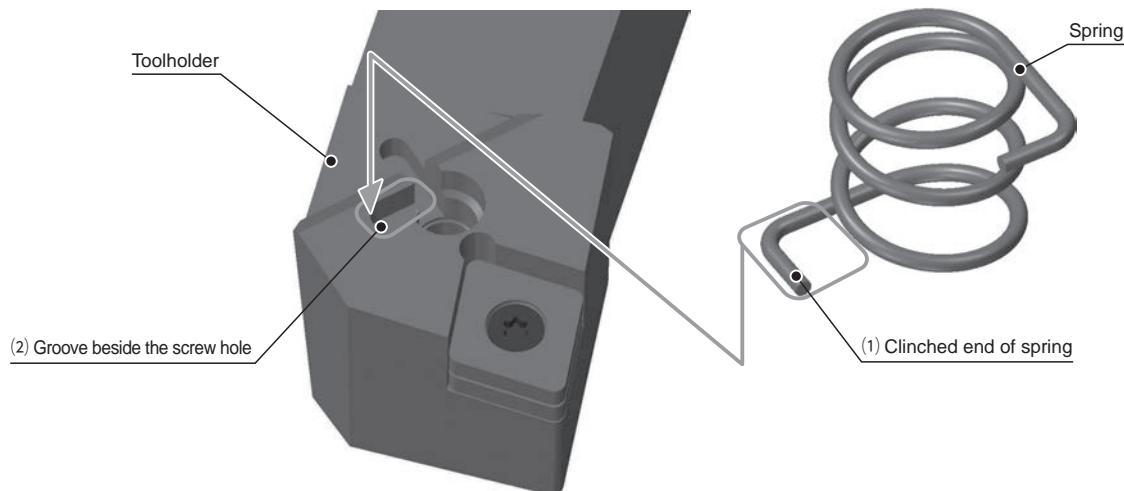

## Instructions

- Recommended tightening torque for setting insert is 7.5Nm when using Wrench LLR-T20 and 5.0Nm when using LLR-T15.  
Excessive or insufficient tightening may result in inadequate clamping.
- Change the clamp and remove one shim when using dimple insert as the thickness of compatible dimple insert is 7.94mm.

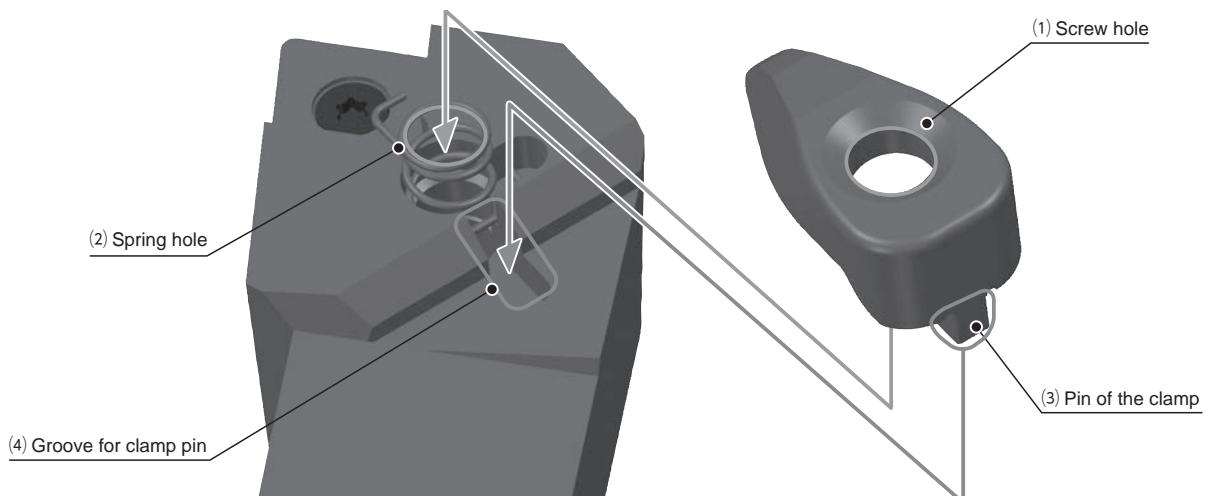

▼ Follow the instructions below to put on a clamp.

**1. Put the clinched end (1) of spring to the groove beside the screw hole (2).**

**2. To put the clamp on the toolholder, Put the pin (3) of the clamp into the groove (4) provided on the toolholder. Make sure that the screw hole (1) of the clamp and spring hole (2) on the toolholder are matched.**

Caution : Confirm the clinching end of spring is in the groove 5 provided on underside of the clamp.

**3. Finish up by tightening the screw.**

\*A holder having the dimension "h" of 25 or greater comes with two shim seats. An insert "7.94-mm thick" can be also mounted by removing one of the shim seats.

### Multi-clampholder

Just changing the clamps enables the holder to clamp pin type, flat or dimple style inserts.

\*A holder having the dimension "h" of 25 or greater comes with two shim seats. An insert "7.94-mm thick" can be also mounted by removing one of the shim seats.

### Multi-clampholder

Just changing the clamps enables the holder to clamp pin type, flat or dimple style inserts.

**Multi-Clamp holder**  
Just changing the clamps  
enables the holder to clamp pin  
type, flat or dimple style inserts.

\*A holder having the dimension "h" of 25 or greater comes with two shim seats. An insert "7.94-mm thick" can be also mounted by removing one of the shim seats.

**Multi-clampholder**  
Just changing the clamps enables the holder to clamp pin type, flat or dimple style inserts.

### Attention: When tightening screws

- Make sure the wrench tip and wrench hole are neither deformed nor stripped
- Engage the wrench straight to screw hole

- Do not apply more torque than the recommended amount (as shown to the right)

Note: Wrenches and bits come in a pack of five  
Clamp screws come in a pack of ten

### Recommended Tightening Torque

## ■ General Turning Inserts Explained

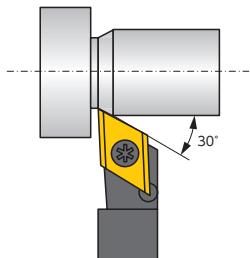

### ● Advantage for each geometry

**CC.. Style (80°)**

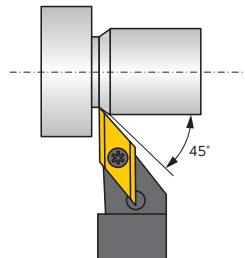

- Increased toughness. Cutting edge is close to insert pocket.
- Not applicable to undercut

**DC.. Style (55°)**

- Versatile geometry. Toughness of CC.. with flexibility of VC..
- Up to 30 deg. undercuts

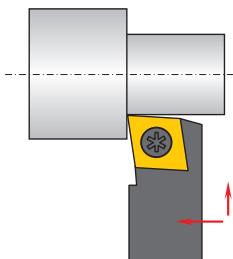

**VB / VC / VP Style (35°)**

- Wide coverage in work geometry.
- Up to 45 deg. undercuts

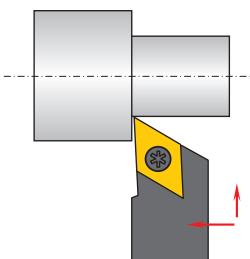

### ● Chip Control and Finish

**SCLCR ➔G22**

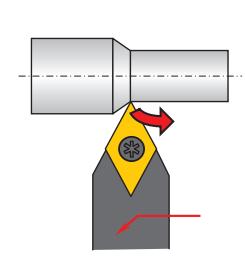

Rigid clamping  
High dimensional repeatability

**SDJCR ➔G24**

Increased room for chip evacuation creates better surface finish

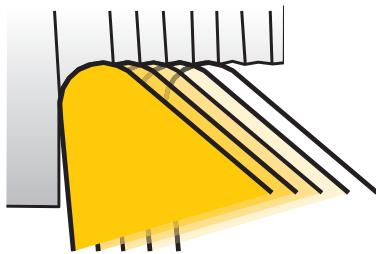

**SDNCN ➔G24**

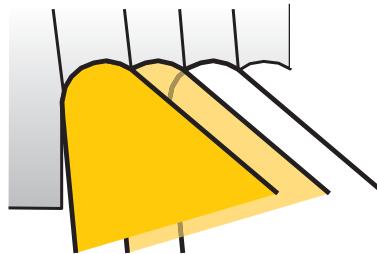

Chips flow away from the work

# Front Turning

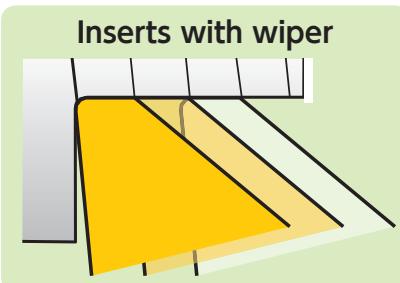

## Surface Finish in General Turning Using Inserts with Wiper Flat

Slower feed rates create better finishes but sacrifices cycle time, chip control, and tool life.

Fast feed rates improve chip control but produce a bad surface finish.

Inserts with a wiper flat create good chip control and surface finish when feed rates are increased.

### Wiper Flat Insert - WP series

TCGT.. -WP (TFT) ➔ G36

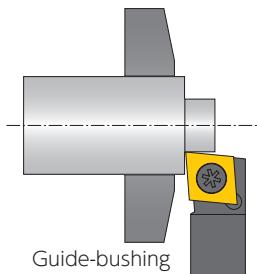

for STAC toolholders

VCGT.. -WP (TFV) ➔ G29

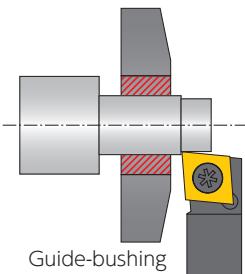

for SVJC toolholders

## Roughing and Finishing Long Work on Swiss Lathes

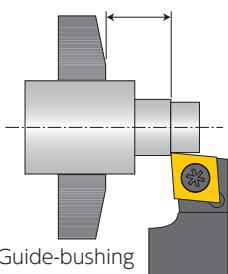

Single pass machining is common in Swiss front turning operations.

Conventional toolholders are not suitable for roughing or finishing of long parts. The guide-bushing cannot hold machined bar stock.

### Shifted Holders

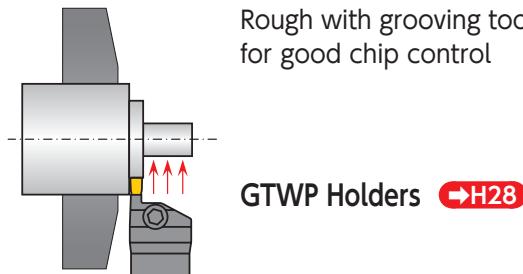

Shifted Holders make a finishing process possible without worrying about the bar stock coming out of the guide-bushing. Coolant flows effectively which improves chip control thanks to the increased room between the tools and guide-bushing.

# Y-axis Toolholders

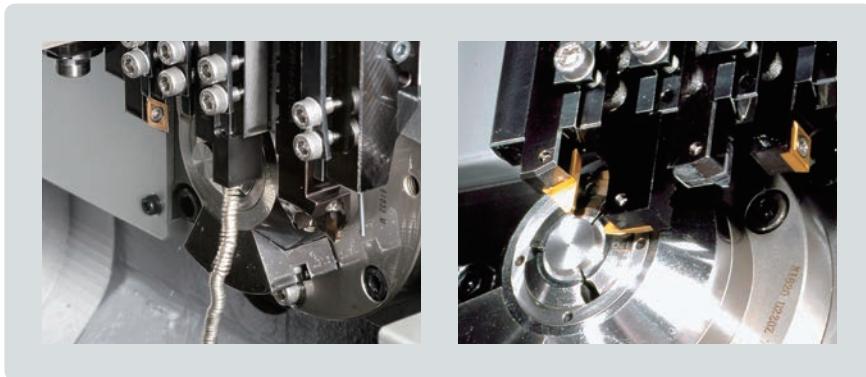

Chip control by gravity

## Features

WATCH ON  
YouTube

- Chip drops down to the bed of the machine due to gravity, and chip control problem is solved
- Available in coolant through style
- Front turning, grooving, and back turning operations can be performed by utilizing Y-axis control

- Perfect solution for chip problems
- Less wear, more stable dimensions

## Programming guidance

| Regular Toolholder | Y-axis Toolholder                |

Lined up Front turning

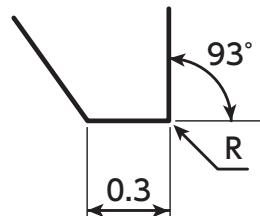

**Good surface!**

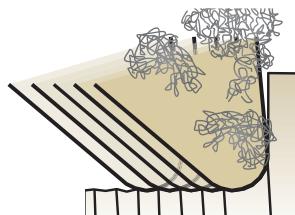

**Good chip control!**

**Good inside corner R!**

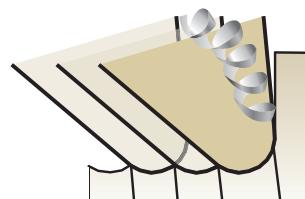

Edge design

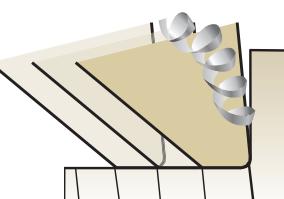

## Surface finish in front turning

Unstable chip control at low feed rate to keep surface finish

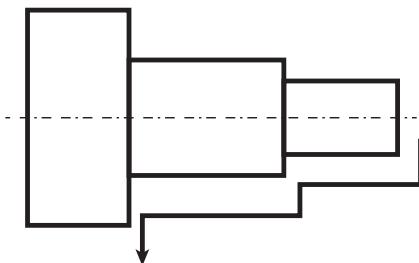

Bad surface finish at high feed rate to improve chip control

TFD wiper insert offers good chip control and surface finish

## Cutting condition

|                         |                                  |
|-------------------------|----------------------------------|
| Work material           | SUS304                           |
| Cutting speed           | $V_c = 30 \sim 80 \text{ m/min}$ |
| Feed speed              | $f = 0.015 \text{ mm/rev}$       |
| Depth of cut            | $a_p = 0.15 \text{ mm}$          |
| <b>DT4 TFD11FR05AM3</b> | <b>1500pcs /corner</b>           |
| Conventional tool       | 700pcs/corner                    |

Surface finish of conventional tool after 500pcs machined was  $Ry 10.2 \mu\text{m}$ , and dimensional change 0.1mm occurred at start of machining.

TFD-AM3 chipbreaker(DT4 grade) achieved stable machining with no dimensional change after 1,000pcs machined. Surface roughness was  $Ry 2.3 \mu\text{m}$ .

# AT breaker

## Features

- Almighty breaker which combines sharp edge and cutting edge strength!
- By mirror finish breaker, it is able to suppress built up edge in slow speed region and sticky work material (such as S10C e.t.c.)
- Able to machine high precision due to E class precision inserts.

(Cutting edge shape)

## Case study

| Shaft machining  |                  |
|--|------------------|
| Work material  | : S15C           |
| Cutting speed (m/min)  | : 20 ~ 150       |
| Feed (mm/rev)  | : 0.02           |
| Depth of cut (mm)  | : 0.10           |
| Coolant  | : WET            |
| <b>TM4 AT breaker</b>  | 1,600 pcs/corner |
| Competitor's polished breaker<br>(PVD coated carbide)  | 500 pcs/corner   |
| Due to the strict dimensional tolerance, tool life was not stable using conventional product.<br>Thanks to AT breaker, deposition has been restrain and tool life became longer. |                  |

| Shaft machining   |                  |
|---|------------------|
| Work material   | : S45CL          |
| Cutting speed (m/min)   | : 200            |
| Feed (mm/rev)   | : 0.07           |
| Depth of cut (mm)   | : 0.5            |
| Coolant   | : WET            |
| <b>TM4 AT breaker</b>   | 1,500 pcs/corner |
| Competitor's polished breaker<br>(PVD coated carbide)   | 900 pcs/corner   |
| Stable machining and longer tool life can realize due to the sharp edge and cutting edge toughness of AT breaker. |                  |

# DS-ACH Toolholders

## Features

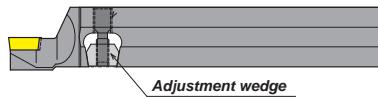

- Adjust centerline height simply with a wrench

### 1 Adjust centerline height easily

- Eliminate center boss on end faces
- Provide constant OD dimension
- Adjust easily in machine

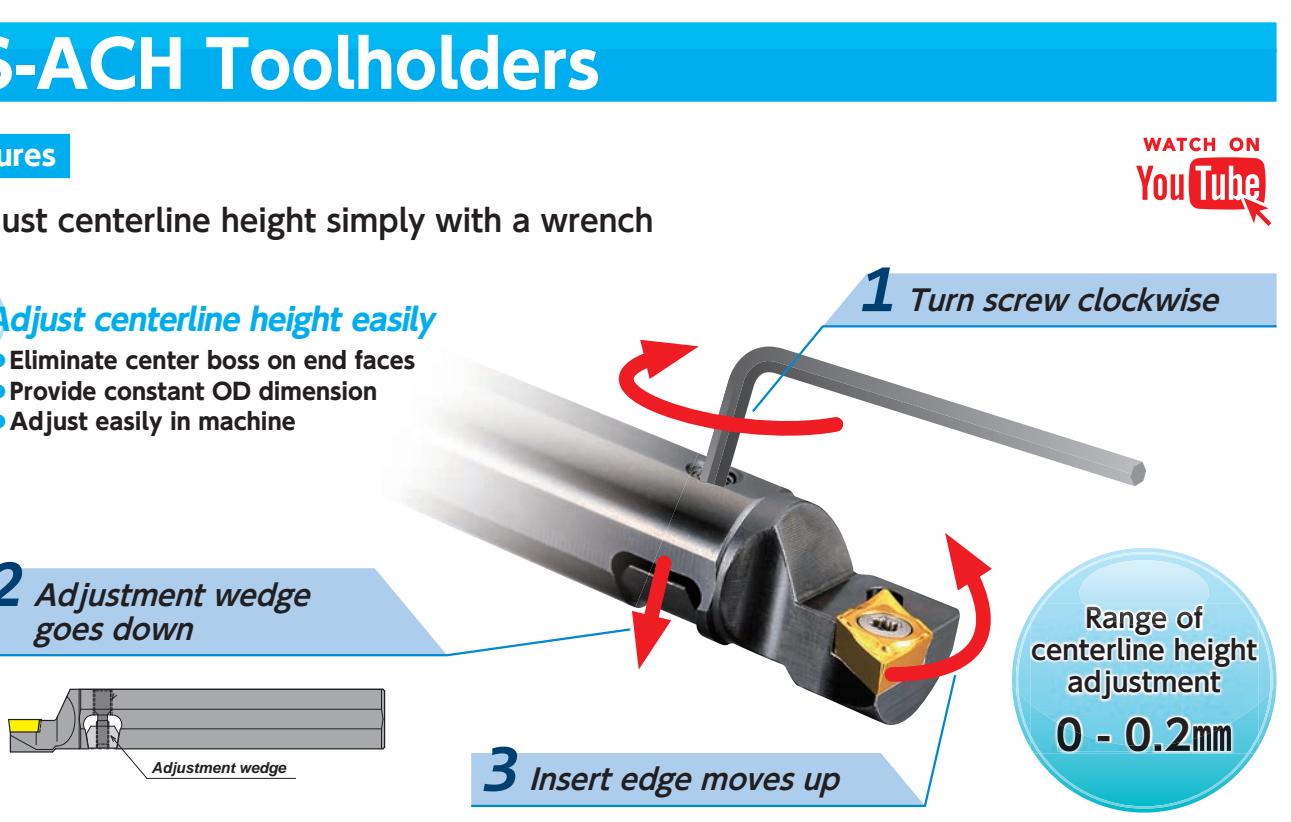

### 1 Turn screw clockwise

### 2 Adjustment wedge goes down

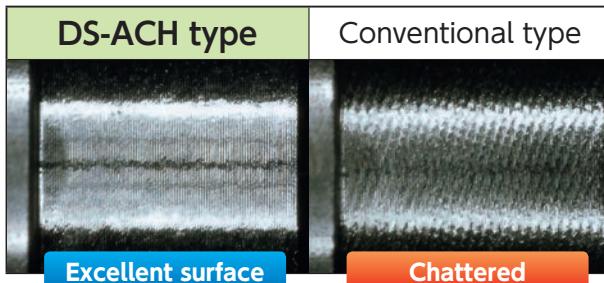

### 3 Insert edge moves up

Range of centerline height adjustment  
0 - 0.2mm

### 2 Optimized design reduces vibration

Improved chatter resistance.

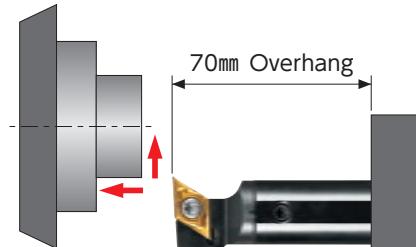

### Tested cutting conditions (SUS304)

Work material : SUS304

Holder : DS-SDUL19-11-ACH

Insert : DCGT11T302MCL TM4

Cutting condition :  $V_c = 75 \text{ m/min}$ ,  $f = 0.05 \text{ mm/rev}$ ,  $a_p = 2.0 \text{ WET}$

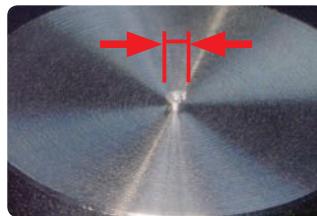

### How to use

Insert moves in an upward direction only. (Loosen wedge screw before making any adjustment)

① Install the holder slightly below centerline. Then take a facing test cut.

② Measure the diameter of the centerboss.

③ Raise the center height by one half of the diameter of the boss. Adjustment references are available in the tool case.

④ Re-machine the end face.

\*Adjustment instructions are supplied in the tool case

# DS Toolholders

Make the most of vacant drill sleeves

# DS / DS-ACH Toolholders

Industry Proven Concept

Are you satisfied with the number of tool positions in your machine?

NTK DS type toolholders are useful when additional tool positions are required

Front turning, Back turning, Grooving, Threading, and Small boring which fit into the machines' vacant drill sleeves

DS Series toolholders can be used with both Swiss or non-Swiss type CNC lathes

## Features

- More turning tools without any hassle
- Available for Front turning, Back turning, Grooving, Threading, Micro-boring, and interchangeable tooling
- Available shank size range: from 14 mm to 32 mm

## Toolholders for DC.. Inserts

### Y-SDJC

(Y-axis)

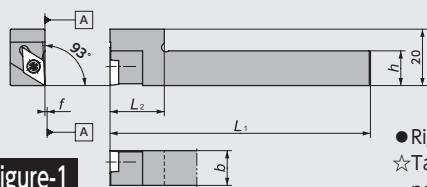

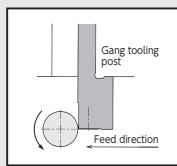

Figure-1

- Right-Hand style shown
- ☆ Takes Right-hand or neutral insert

### Y-SDNC

(Y-axis)

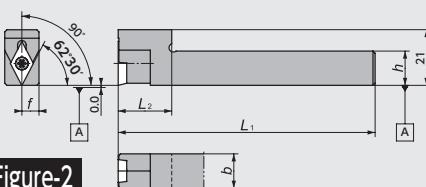

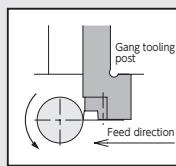

Figure-2

### Y-SDJC-OH2

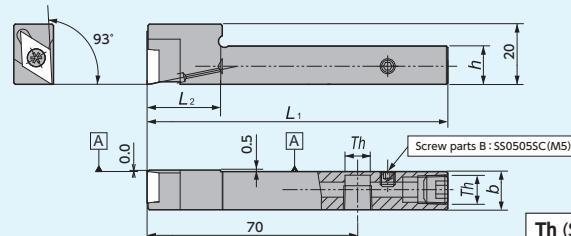

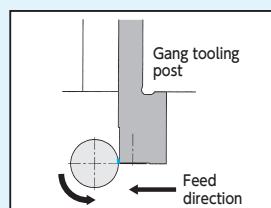

(Y-axis/  
Coolant through)

Figure-3

Th (Screw parts A)  
1212 size : SPR 1/8(Rc 1/8)

- Right-Hand style shown
- ☆ Takes Right-hand or neutral insert

### Y-SDJC-OH

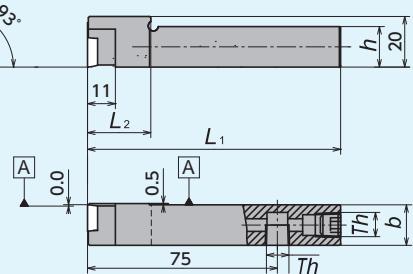

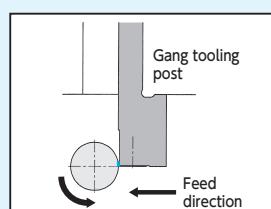

(Y-axis/  
Coolant through)

Figure-4

Th (Screw parts A)  
1212/1616 size : SPR1/8(Rc1/8)

- Right-Hand style shown
- ☆ Takes Right-hand or neutral insert

### DS-SDU

(DS Holder)

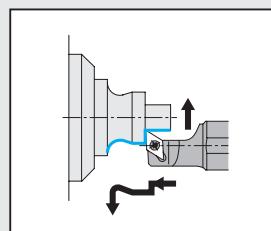

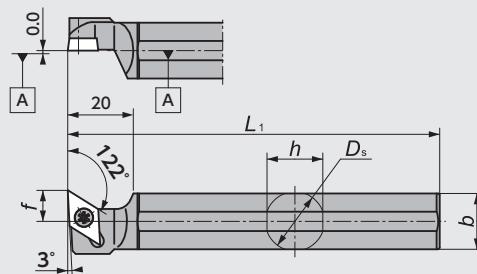

Figure-5

- Left-Hand style shown
- ☆ Takes Right-hand or neutral insert

### DS-SDU-ACH

(DS-holder with Adjustable centerline height)  
(Parts)

When coolant is supplied from the tool post directly to the tools, please remove screw parts [B] and set screw parts A at side and rear of toolholder.  
 Wrench for screw parts [A] (SS0605SC) is not attached.

Please use hex wrench 3.0(LW-3) for SS0605SC, hex wrench 5.0(LW-5) for SPR1/8.

#### ■ Recommended max. depth of cut for each pass

(Multiply this ratio by the length of blade (a) to obtain the max. depth of cut for each pass)

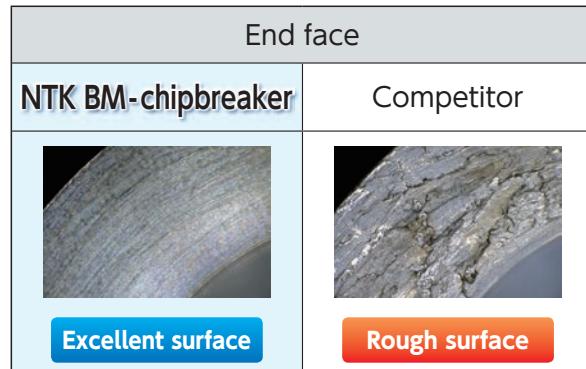

| Grade<br>Work material | PVD Coated Carbide<br>ST4·QM3·DT4·DM4·TM4·VM1·ZM3 |
|------------------------|---|
| Steel                  | $a \times 0.7$                                    |
| Stainless Steel        | $a \times 0.6$                                    |
| Non-ferrous material   | $a \times 0.9$                                    |
| Plastic                | $a \times 0.9$                                    |

a : Length of Blade   b : Max. Depth of Cut

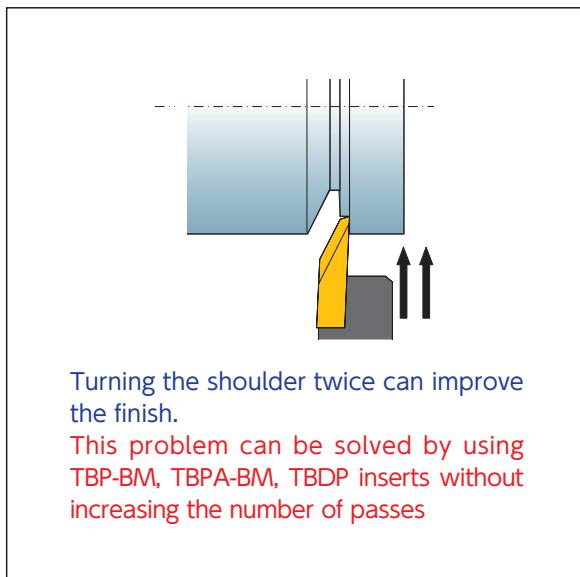

#### ■ When the length of blade (a) is not long enough

Back turning can be performed multiple times until the total depth of cut reaches (b).

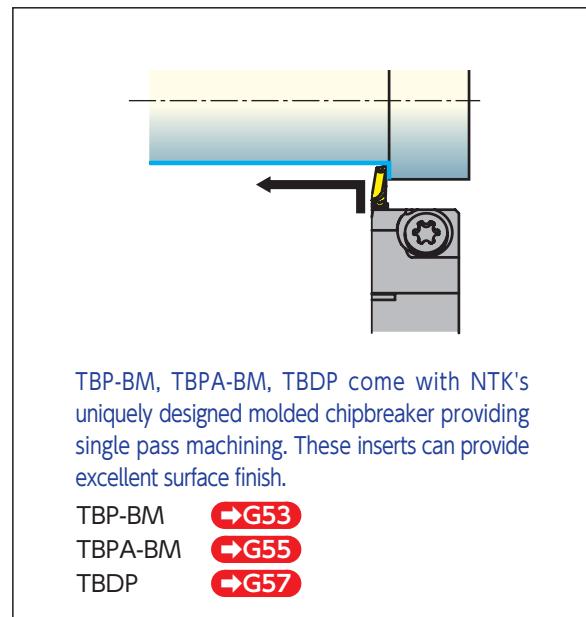

#### ■ When experiencing rough finish on shoulder

Turning the shoulder twice can improve the finish.

This problem can be solved by using TBP-BM, TBPA-BM, TBDP inserts without increasing the number of passes

TBP-BM, TBPA-BM, TBDP come with NTK's uniquely designed molded chipbreaker providing single pass machining. These inserts can provide excellent surface finish.

# TBP-BM / TBPA-BM for Back Turning

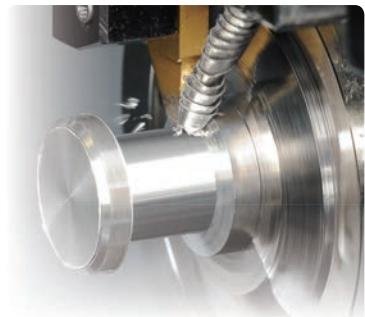

## Features

- "Single Pass Back Turning" offers excellent surface finishes
- Up-right style insert and screw clamping provides high rigidity
- Wiper flat on cutting edge offers excellent surface finishes even under high feed cutting conditions

## New BM chipbreaker

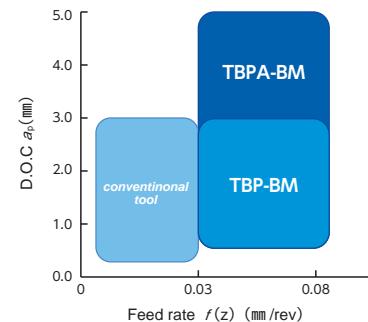

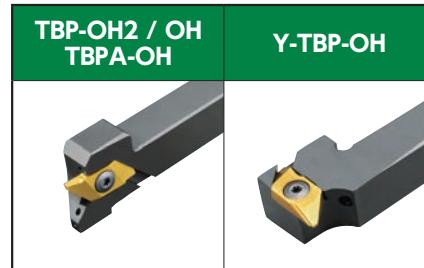

- Prevents the rough end face from hitting the chip
- Wiper flat on cutting edge creates excellent surface finishes

## Best Solution for Chip Control

Coolant through toolholders now available

## Superior Surface Finish

| 1Pass  | BM chipbreaker |    | Competitor's tool |    |
|--|----------------|----|-------------------|----|
|  | End face       | OD | End face          | OD |
|  |                |    |                   |    |
| Material : SUS304(Φ16) , Cutting condition : $v_c=80\text{m/min}$ $f(x)=0.02\text{mm/rev}$ $f(z)=0.08\text{mm/rev}$ $a_p=3.0\text{mm}$ WET |                |    |                   |    |

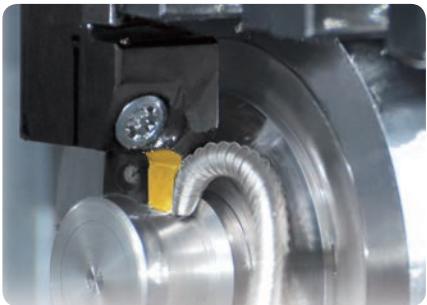

## Excellent Chip Control

| Feed rate $f(z)$ (mm/rev) | BM chipbreaker    |      | Competitor |      |
|---------------------------|-------------------|------|------------|------|
|                           | D.O.C. $a_p$ (mm) | 0.05 | 0.08       | 0.05 |
| 0.5                       |                   |      |            |      |
| 3.0                       |                   |      |            |      |

Material : SUS304(Φ16) , Cutting condition :  $v_c=80\text{m/min}$    WET

# BACK DUO

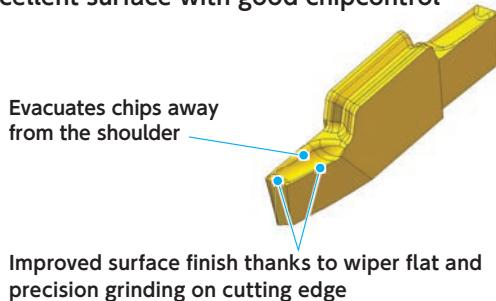

## Features

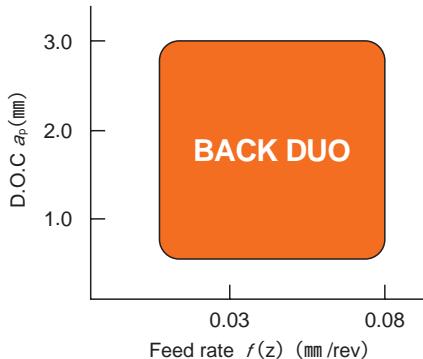

- New chipbreaker covers a wide range of cutting conditions
- No-compromise quality back turning tools
- High quality finish in a single pass
- No finishing cut required → Reduced cycle time
- Multi point clamping system ensures rigidity

## New 3D chipbreaker

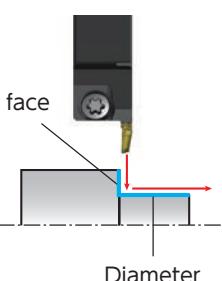

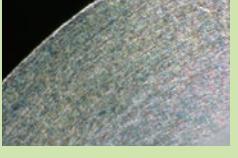

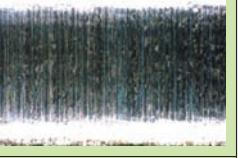

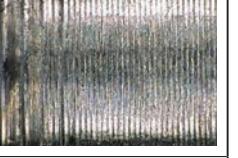

Excellent surface with good chipcontrol

## Chip control range

## Surface finish comparison for SUS304

※Inserts having "10M" the R code can be used for machining when the component drawing specifies that the radius is less than R=0.1  
Note: All angles shown are obtained when insert is set in the holder.

※Inserts having "10M", "20M" as the R code can be used for machining when the component drawing specifies that the radius is less than R=0.1, R=0.2. Note: All angles shown are obtained when insert is set in the holder.

## ■ CTP/CTPA/CTPS/CTPW selection guide : Right hand? Or Left hand?

Right-hand recommended

R-hand Toolholder using a R-hand insert with lead angle

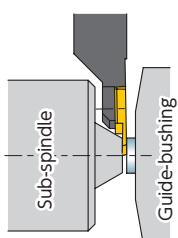

Left-hand recommended

L-hand Toolholder with a non-lead angle insert when the bar stock is held by sub-spindle

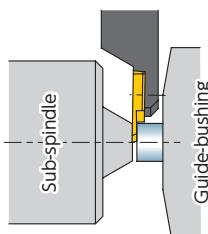

## ■ CTP/CTPA-SUB selection guide Right hand? Or Left hand?

Right-hand recommended

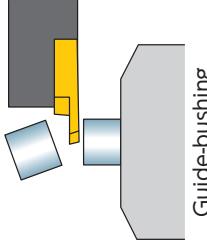

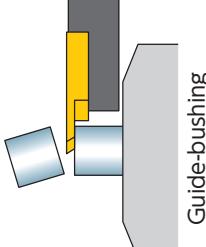

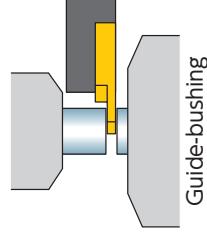

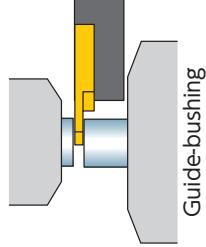

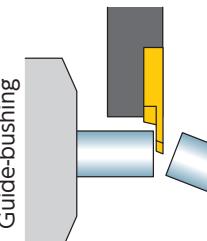

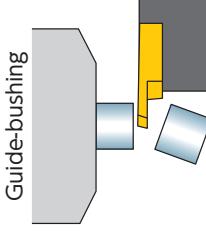

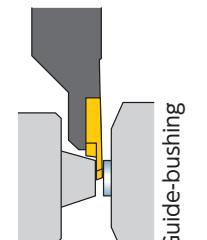

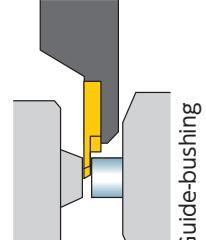

R-hand Toolholder with R-hand insert with lead angle for longer parts or small diameter part. When part length is too short for sub-spindle to hold, use L-hand with slower speed.

Left-hand recommended

L-hand with L-hand insert with lead angle for short part

## ■ Notification about max cut-off diameter

※Max cut-off diameter in the catalog shows when X end point is 0.0.

### ① When cut-off

When X end point became over X0.0, the work material will fall off so that interference will not occur. (Fig 1)

Fig 1

### ② When cut-off while grabbing (When using neutral type)

Max cut-off diameter will depend on X end point, so please check the max cut-off diameter based on X end point.

※Please used the formula below.

#### 【Calculation formula】

Possible machining diameter = Max cut-off diameter - X end point  
(Value notice on the catalog) (Optional)

#### 《Example》

When machining until X-1.0 using CTP15FRN  
 $12.0 - 1.0 = 11.0$  (Max workable diameter)

### ③ When cut-off while grabbing (When using lead angle type)

Max cut-off diameter will depend on X end point, so please check the max cut-off diameter based on "dimension A" below (Fig.2) and X end point.

※Please used the formula below.

#### 【Calculation formula】

Possible machining diameter = Max cut-off diameter - X end point  
(Value notice on the catalog)

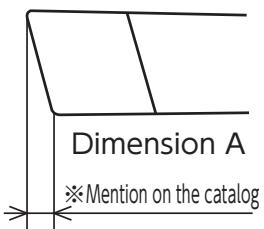

#### 【How to decide X end point】

$X \text{ end point} \geq \text{dimension A} \times 2$   
(Fig.2)

#### 《Example》

When using CTP15FR  
 $X \text{ end point} : 0.460 \times 2 = 0.920$   
(dimension A)  
 $12.0 - 0.920 = 11.08$  (Max workable diameter)

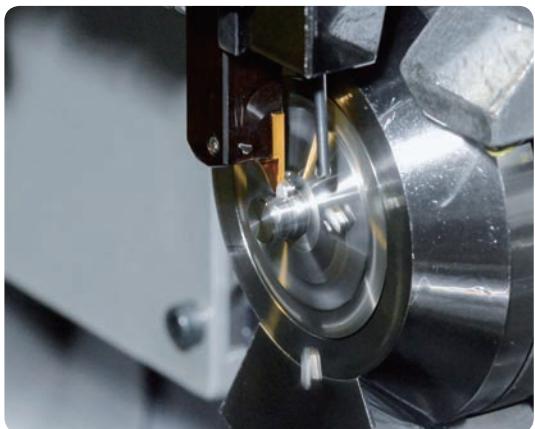

Fig 2

# CTP-CX / CTPA-CX for Cut-off

## Features

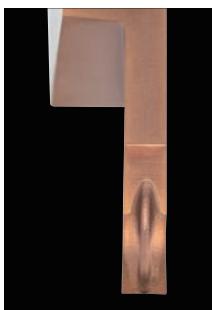

- New 3D molded chipbreaker on CTP style inserts
- Excellent chip control and straight-line stability with proprietary designed CX chipbreaker.
- Fold chips strongly from both ends result superior machined surface finish

With lead angle

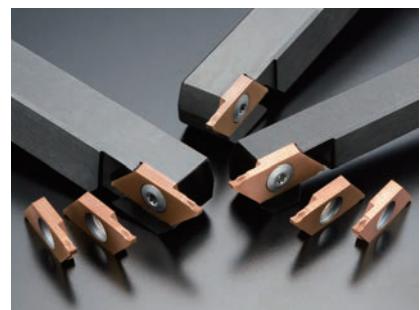

Neutral

## Best Solution for Chip Control

Coolant through toolholders now available

**CTP-OH2 / OH, CTPA-OH2 / OH**

## SS Tools for Cutting off

## CUT DUO

## Features

- Offers excellent chip control and superior surface finishes due to a special molded chipbreaker and precision grinding
- Achieves rigid clamping because of a 3-V point clamping design
- Wide toolholder selection for various diameters

Chip control ( $V_c=80\text{m/min}$ )

# CUT DUO EXTRA

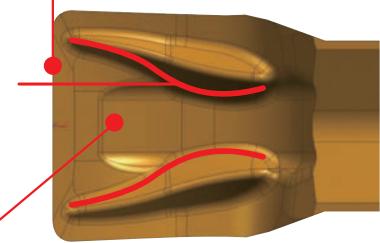

## Features

- New double-edge cut-off tools with 3mm width for max. cut-off diameter of 42mm
- Original 'S' shape chipbreaker provides controlled chip evacuation

### 1 Chip control

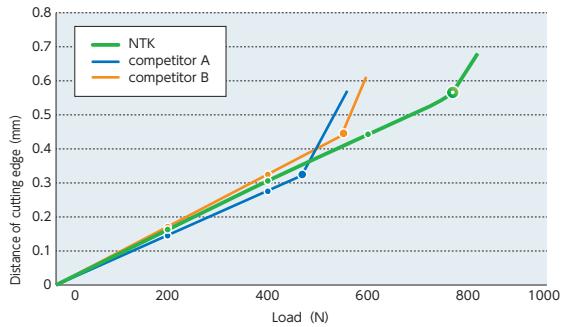

- Straight design improves toughness of cutting edge

- Folds chips from both ends strongly

- High rake angle for up-sharp edge

### 2 High rigidity

- Improved reliability and productivity on high-load cut-off application

## Case study

# CSV Series

Tooling for small diameter parts

**Best tool for up to 5mm diameter materials**

## Features

- Very sharp edge with mirror finish provides superior precise machining
- Interchangeable tool : All the inserts can use the same toolholder
- Specially designed edge shape for small diameter machining

Front turning

Threading

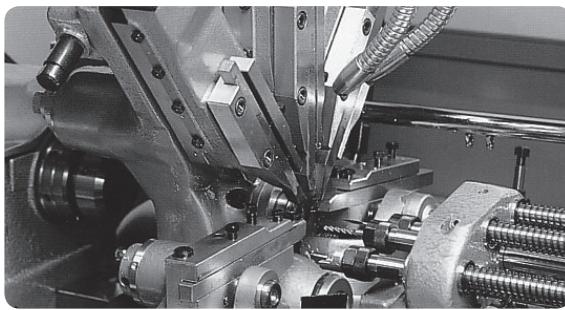

Back turning

Cut-off

Grooving

- Holders for Cam-style machine also available

# CTPS Series

**Best tool for Cam-style machine !!**

## Features

- All the inserts can use the same toolholder
- Designed to be used for back turning, cut-off, grooving and threading
- The dedicated SVAC-N type is offered for front turning

## CTPS

Best for up to 10mm diameter material

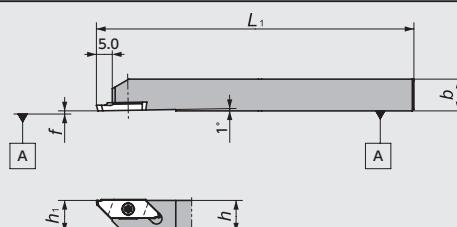

Figure-1

● Right-Hand style shown

## CTPSR-SUB

Best for up to 4mm diameter material

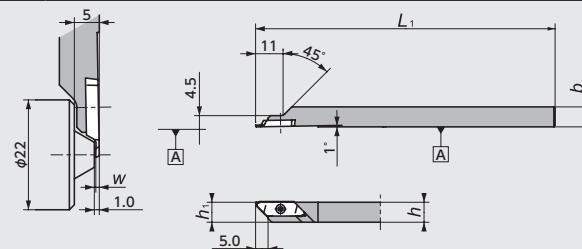

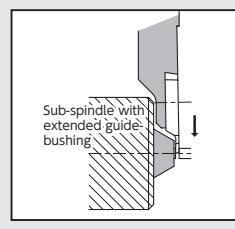

Figure-2

● Right-Hand style shown

Note: All angles shown are obtained when insert is set in the holder.

# Y-axis Toolholders

Chip control by gravity

## Features

- Chip drops down to the bed of the machine due to gravity, and chip control problem is solved
- Available in coolant through style
- Front turning, grooving, and back turning operations can be performed by utilizing Y-axis control

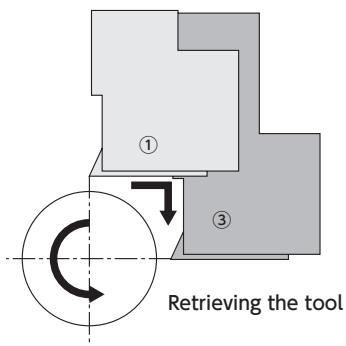

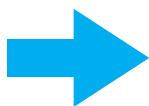

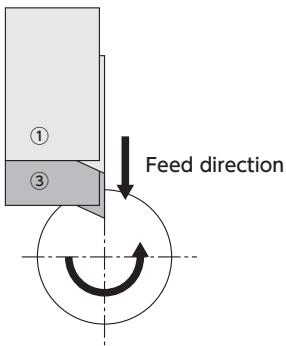

- Perfect solution for chip problems
- Less wear, more stable dimensions

## Programming guidance

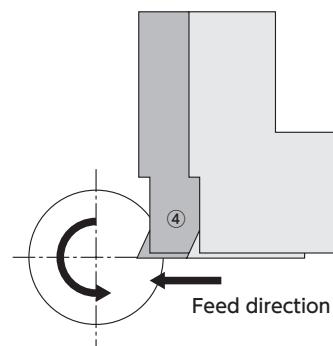

| Regular Toolholder | Y-axis Toolholder |
|--------------------|-------------------|
| ①T300              | Select tool       |
| ②G0 X11.0 Z0 T3    | Position tool     |
| ③                  |                   |
| ④G1 X8.0 F0.08     | Move to OD to cut |
| ⑤ Z5.0 F0.05       | Cut 5mm length    |
| ⑥ X11.0            | Cut face          |
| ⑦G0 X11.0          |                   |

## Cut by X-axis

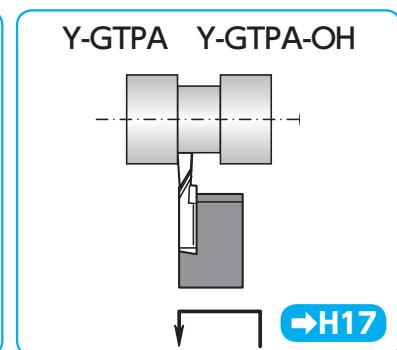

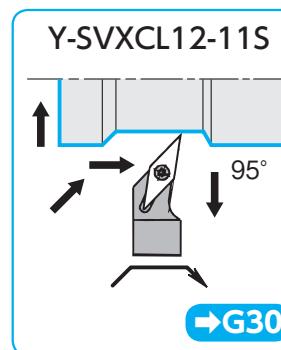

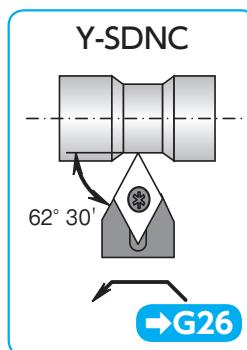

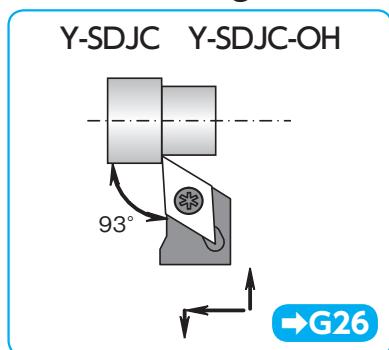

## Cut by Y-axis

Note: Need Y-offset for holder shank size.

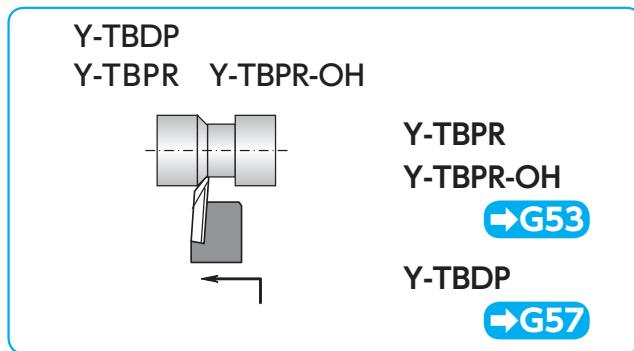

## ■ Lineup

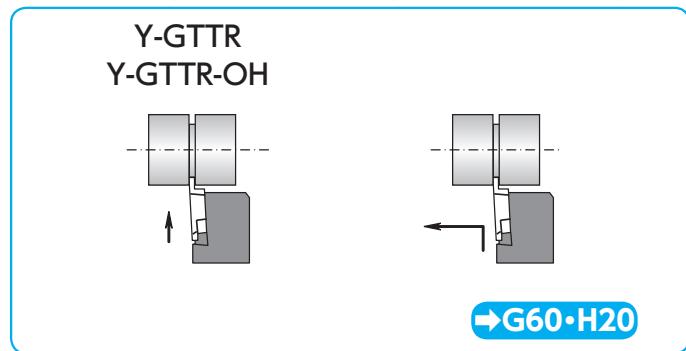

## ■ Front Turning

## ■ Back Turning

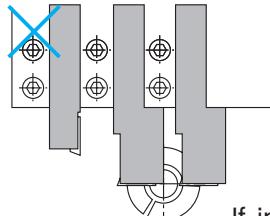

## ■ Grooving / Side turning / Back turning

## ◆Important notes for using Y-axis holders

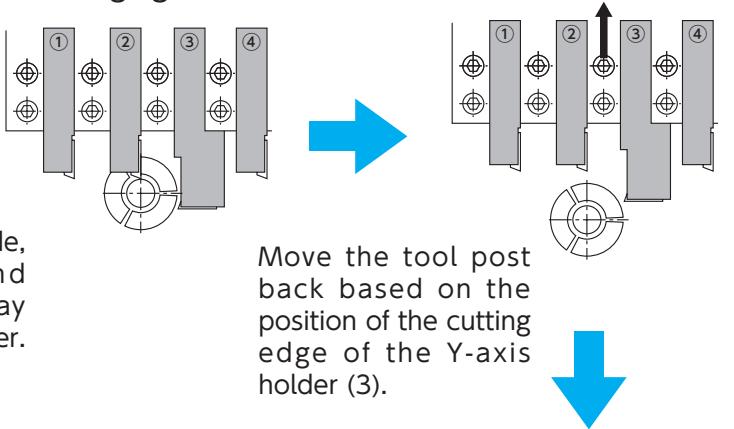

Up to 2 Y-axis holders can be installed on a tool post. Do not install side by side in order to prevent interference.

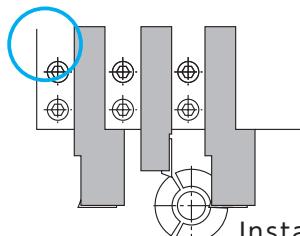

If installed side by side, the work piece and the Y-axis holders may interfere with each other.

When changing tools, set the backward position of the tool post with the overhang of the Y-axis holder(s) as per the reference.

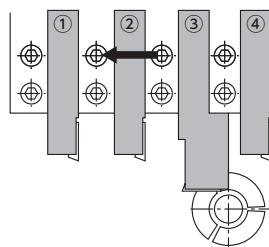

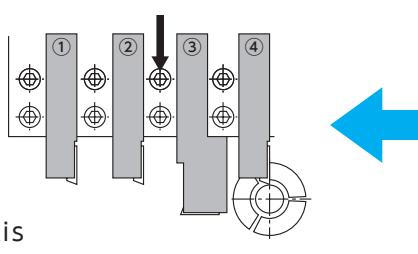

When changing from the tool No. (2) to (4)

Move the tool post back based on the position of the cutting edge of the Y-axis holder (3).

Install a non-Y-axis type holder between the two Y-axis holders.

## OD machining table

The OD that can be machined are indicated by the grooving holder "Y-GTTR type" as an example (The dimensions of other Y-axis holders are the same.)

| Overhang of the Y-axis holder | Figures | Item                                    | L                                       | 20                    | 22                        | 25          |

# Shifted Toolholders

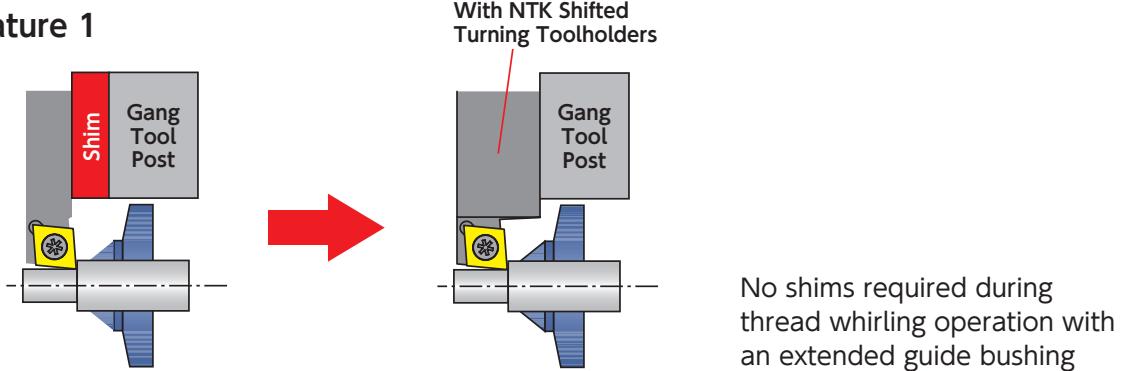

Toolholders for extended guide-bushing

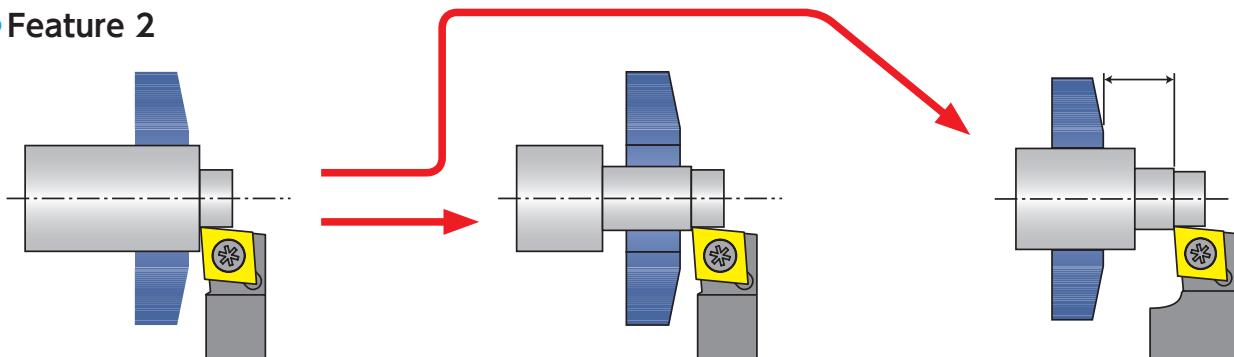

## Two Major Features

1. Eliminate shims for turning holders when extended guide bushing is used (especially in thread whirling)
2. Performs finish cut without retracting roughed section (bar) from guide bushing

### • Feature 1

### • Feature 2

Typical turning

With Conventional Holders:  
Roughed bar comes out when retracted for finish turn

With Shifted Holders:  
Finish turn can be done without retracting the roughed bar

→G22 • G24

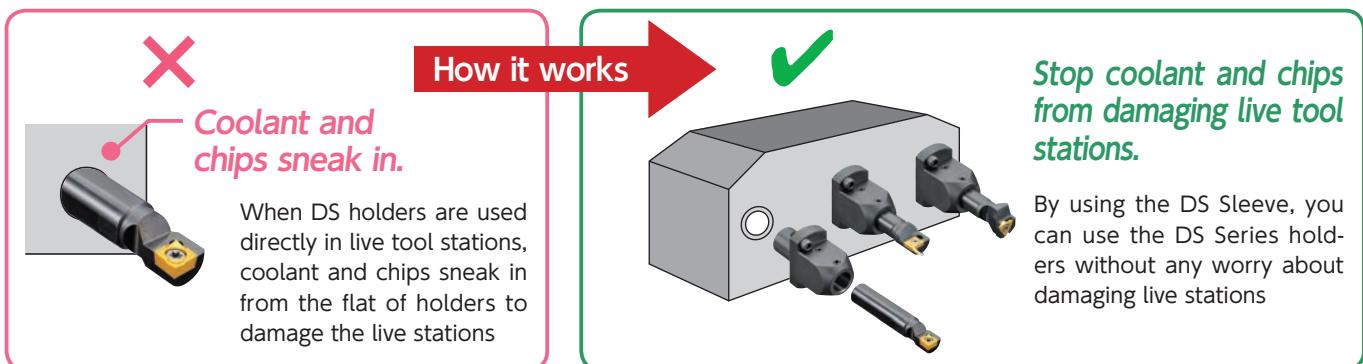

# DS Sleeve

## Features

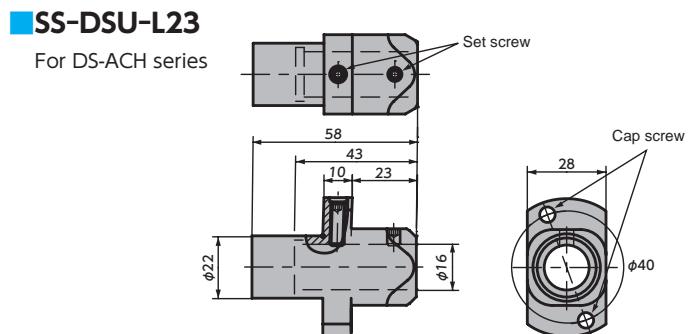

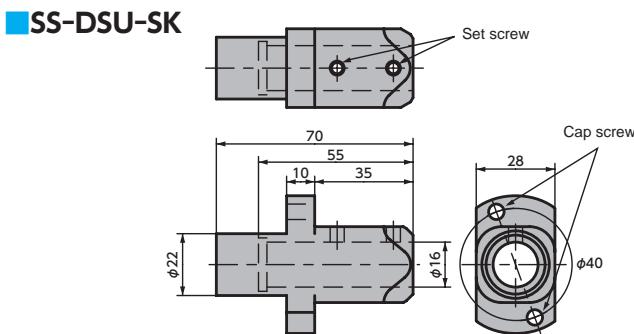

- Prevents coolant and chips from damaging live tool stations
- Accepts DS Series holders to perform various back working
- Designed exclusively for 22mm and 34mm round shank stations
- Compatible with 16mm / 22mm round shank DS Series holders

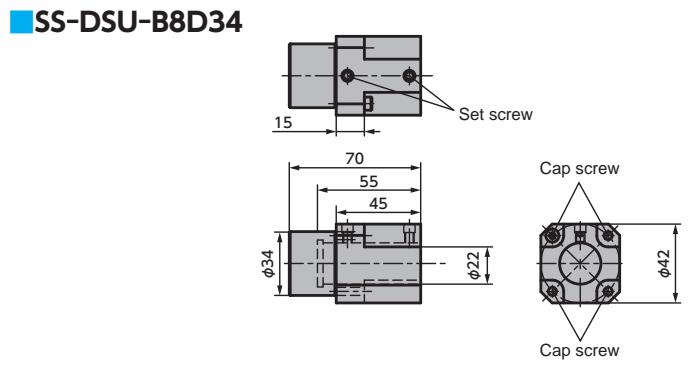

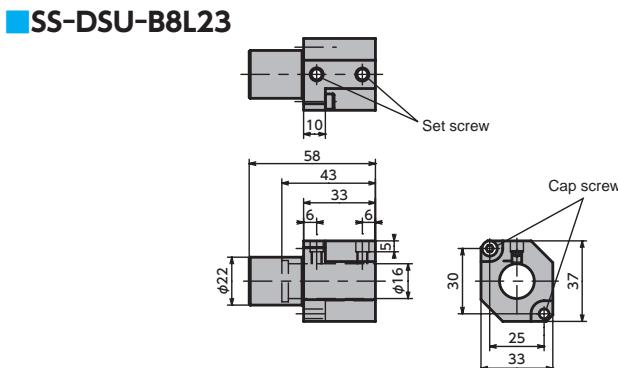

## First Recommendation for Turning

## For Back 4-spindle unit

## For Back 8-spindle unit

## General Information

### OD Grooving

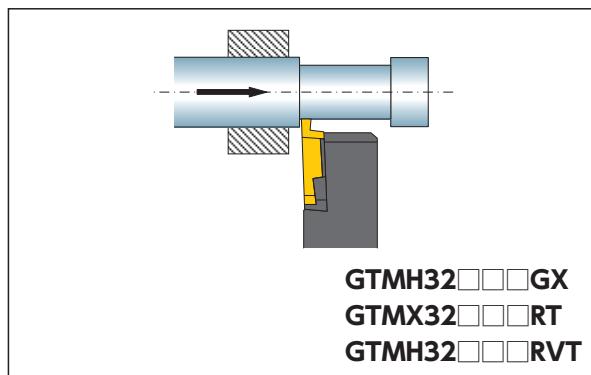

NTK GTMT / GTMH series can be used for uneven diameter grooving thanks to the 2 degree slanted insert mounting on the toolholder

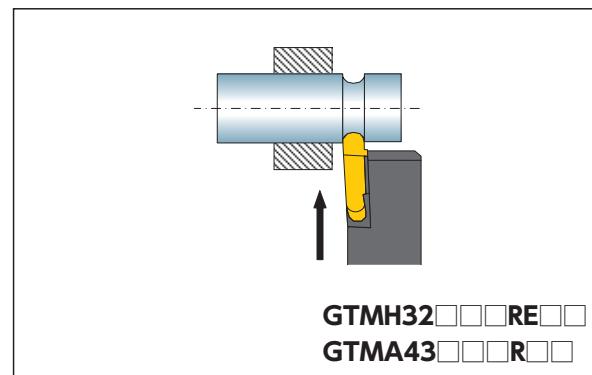

Chamfering and radius machining can be done after the rough grooving process at the center of the groove

### Side Turning

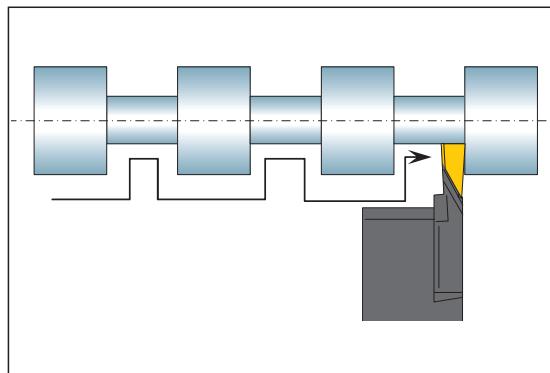

### Full Radius

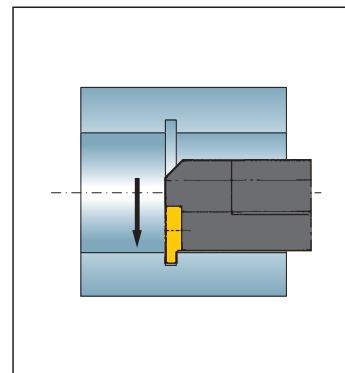

### Rough Plunging for OD Turning

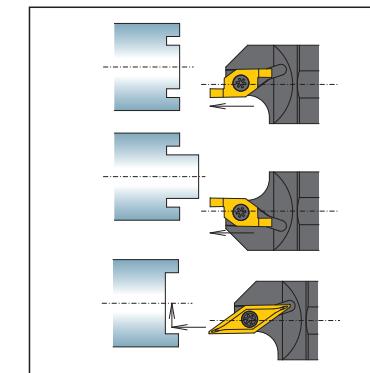

### Spool Grooving

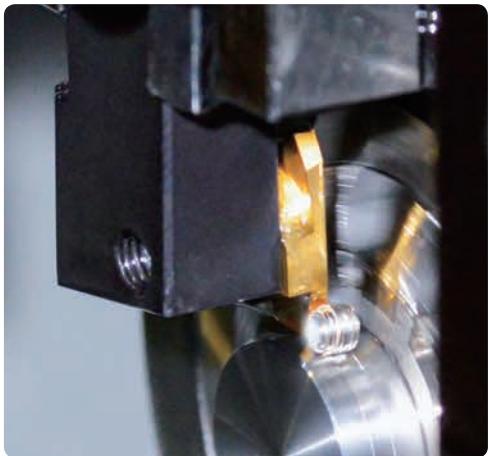

### ID Grooving

### Face Grooving

# GTMH-GX for Grooving / Side Turning

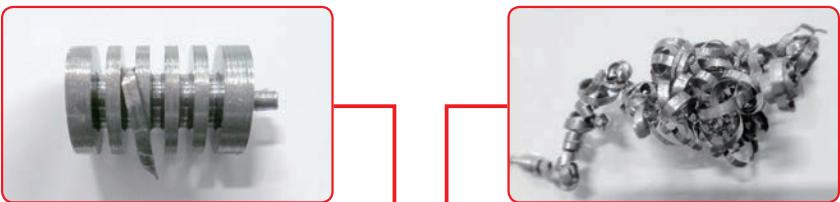

## Features

- Can solve the problem of chips remaining in the grooves and bird's nest of chips
- Good surface finishes on groove side faces
- Up to 2.0mm DOC side turning capability

## Typical Grooving Problems

- Chips remain at the bottom of groove
- Bird's nest of chips

## Excellent Chip Control

### Chipbreakers

Groove width 1.5mm~

Groove width ~ 1.0mm

### Grooving

|  | Feed rate<br>(mm/rev)    | 0.01           | 0.03 | 0.05 |
|--|--------------------------|----------------|------|------|
|  |                          | GX chipbreaker |      |      |
|  | Competitor's chipbreaker |                |      |      |

Material : SUS304 ( $\Phi 6 \rightarrow \Phi 3$ )  $V_c = 80\text{m/min}$   $a_r = 1.5\text{mm}$

### Side Turning

|  | Feed rate<br>(mm/rev)<br>DOC | 0.01 | 0.03 | 0.05 | 0.08 |
|--|------------------------------|------|------|------|------|

|  | 0.5                          |      |      |      |      |
|  | 0.75                         |      |      |      |      |

Material : SUS304  $V_c = 80\text{m/min}$  0.75mm width insert

## Best Solution for Chip Control

Coolant through toolholders now available

### GTT-OH2 / OH

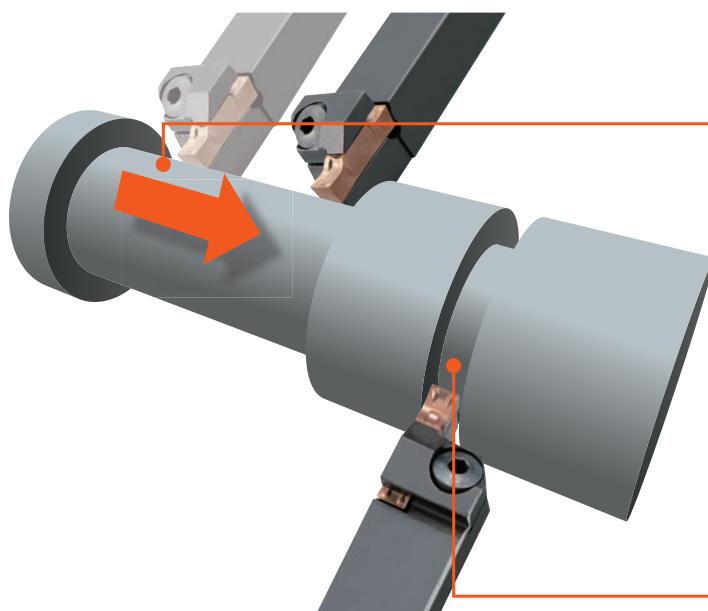

### Y-GTT-OH

→H22

## SCRUM DUO

### Features

- Grooving and side turning tools with highly rigid design
- 3D design chipbreakers result in less tool pressure and excellent chip control

### Side-turning

|                | NTK:GW chipbreaker | Competitor |
|----------------|--------------------|------------|
| Chip           |                    |            |
| Surface finish |                    |            |

Material : SCM415  $V_c=150\text{m/min}$   $f=0.1\text{mm/rev}$   $a_p=1.0\text{mm}$

### Grooving

|                | NTK:GW chipbreaker | Competitor |
|----------------|--------------------|------------|

Material : SCM415  $V_c=150\text{m/min}$   $f=0.1\text{mm/rev}$   $a_p=7.0\text{mm}$

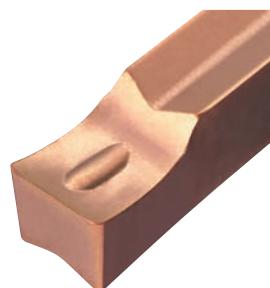

### Chipbreaker

For Grooving / Side-turning

Less tool pressure

GW

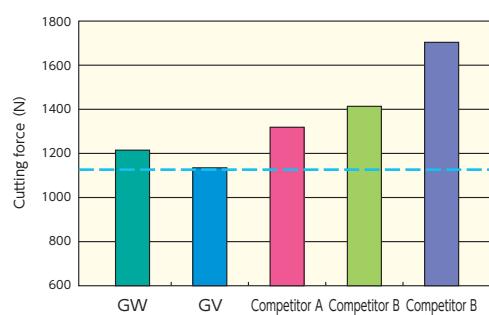

GV

- Excellent chip control
- Good sharpness
- Side turning capability

- Superior sharp edge

### Tool pressure comparison when grooving

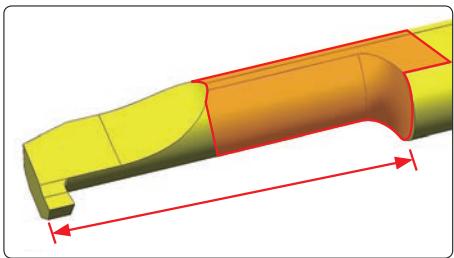

# STICK DUO Short type for ID Grooving

## Features

- Added "short type" STICK DUO series for grooving
- Offers high precision!
- Best for internal grooving in work material's mouth.
- 2 corners=Economical!

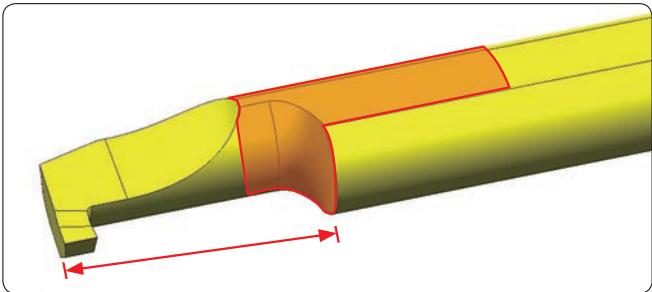

Former

For multiple work shape

Short type

Focused on rigidity

►H34

# STICK DUO ID Face Grooving type

## Features

- Added "face grooving type" STICK DUO series for grooving
- Best for back end surface grooving for small shank.
- 2 corners=Economical!

## Application Example

| Body machining        |                |
|-----------------------|----------------|
| Work material         | : SUS303       |
| Cutting speed (m/min) | : 110          |
| Feed (mm/min)         | : 0.04         |
| Inserts width (mm)    | : 2.0          |
| Coolant               | : WET          |
| <b>TM4</b>            | 1000pcs/corner |
| Competitor            | 500pcs/corner  |

Able to machine twice as long as competitors due to TM4 coating which has wear resistance ability. Also, due to the excellence in sharpness, surface is good as well.

| Machine parts machining |               |
|-------------------------|---------------|
| Work material           | : SUS304      |
| Cutting speed (m/min)   | : 70          |
| Feed (mm/min)           | : 0.04        |
| Inserts width (mm)      | : 1.5         |
| Coolant                 | : WET         |
| <b>TM4</b>              | 500pcs/corner |
| Competitor              | 300pcs/corner |

Excellent chip control by best breaker design. Also, about two times longer tool life due to the coating of TM4 which is superior to wear resistance.

►H37

# SATURN DUO

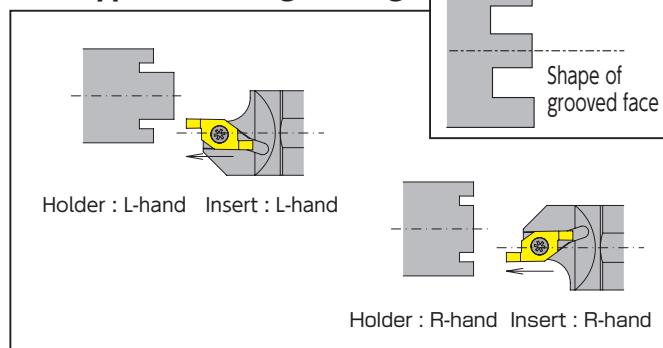

Face grooving tool

## Features

- FGV type for face grooving and FBV type for face machining
- Economical double-corner specification
- Improved tool rigidity by optimizing the overhang and holder shape
- Gang-type, front-gang-type and sleeve holder types available

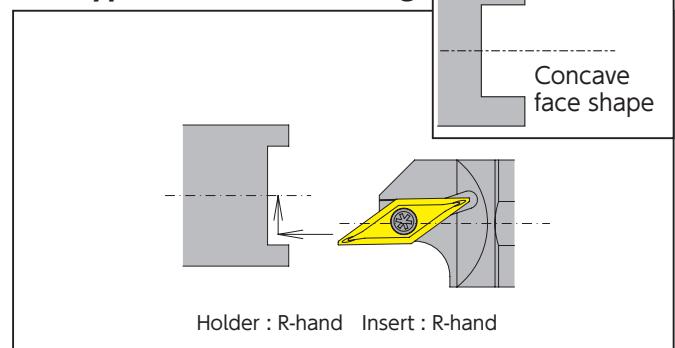

### FGV type for face grooving

- Grooving is possible under a wide range of cutting conditions due to strengthened rigidity of both insert and holder
- Minimum machining diameter of  $\phi 6.0$ , and groove width of 1.0mm
- Left-hand types available for machining work with a boss

### FBV type for face machining

- Further improved face machining efficiency
- Minimum machining diameter of  $\phi 8.0$

### Recommended Cutting Condition for FGV Style Tooling (for Face Grooving)

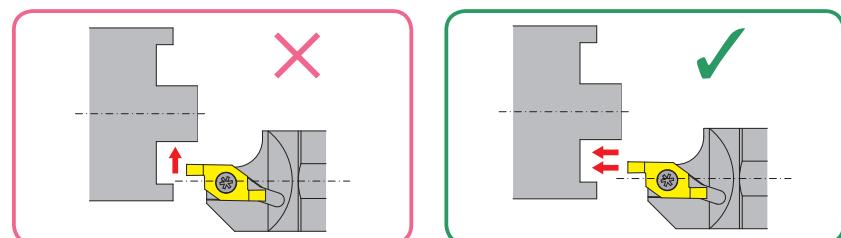

|                       |                      | Steel<br>(Carbon Steel, Alloy Steel) | Stainless Steel<br>(Excluding SUS303) | Free Cutting Steel<br>(Including SUS303) | Non-ferrous Metals<br>(Brass, Aluminum, Copper) |

### ☆Tips for Successful Face Grooving

- ① Run multiple passes if turning wider grooves.  
Make sure to groove from outer diameter to inner diameter to avoid any interference.
- ② If lines appear on the boss section, slow down feed rate when retracting the tool.
- ③ If scratch appears at the end of the boss, slow down the feed rate.
- ④ If groove surface looks torn, either slow down feed rate or increase speed.
- ⑤ If groove bottom looks torn with a speed and feed condition, increase the speed.

### ☆Note

Side turning cannot be performed with FGV style tooling

## ■ Recommended Cutting Conditions for FBV Style Tooling (for Face Grooving)

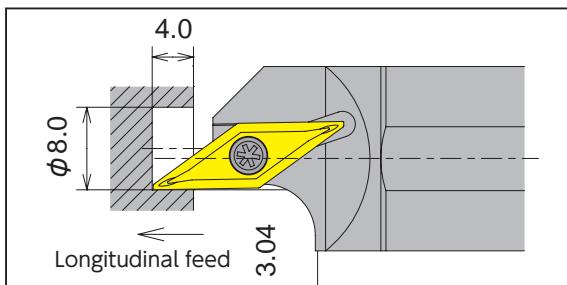

Minimum machining diameter:  $\phi 8.0$  WET

|                          |                         | Steel<br>(Carbon Steel, Alloy Steel) | Stainless Steel<br>(Excluding SUS303) | Free Cutting Steel<br>(Including SUS303) | Non-ferrous Metals<br>(Brass, Aluminum, Copper) |

|                          | 2.0                     | 0.01 (0.005 ~ 0.025)                 | 0.01 (0.005 ~ 0.025)                  | 0.02 (0.01 ~ 0.05)                       | 0.02 (0.01 ~ 0.05)                              |

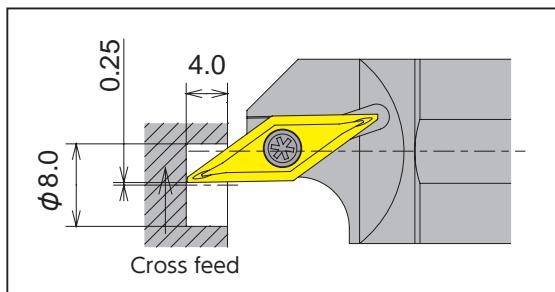

\* When machining difficult materials where chip control is problematic (such as SUS303), it is recommended that the machining be carried out in several stages.

### ☆Machining process

- For materials with good machinability, it is possible to machine up to 4.0mm deep at a low feed rate in a single pass for both longitudinal feed and cross feed.

Cutting in Z direction : Longitudinal feed

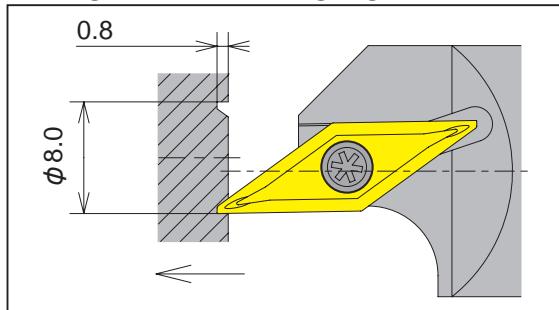

Cutting in X direction : Cross feed

### ☆Useful tips for machining

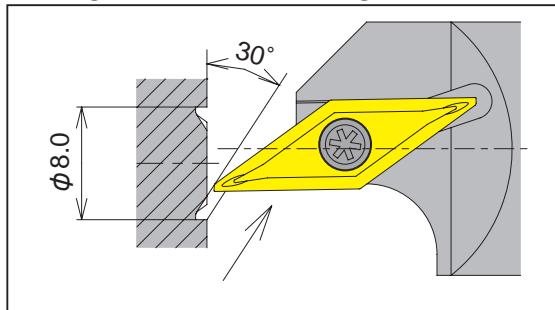

When burrs occur on ID surface, it is recommended to perform the cut in 2 passes, one for roughing and one for finishing as shown in the following procedure:

☆Example of 2-pass machining: Leave 0.2mm on roughing then run a finish cut

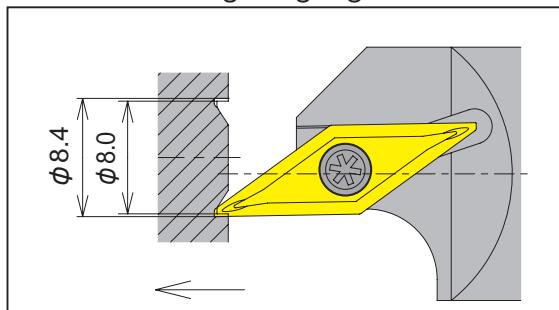

#### ① Longitudinal feed (roughing)

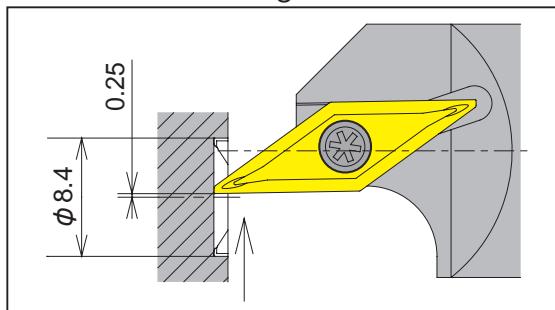

#### ② Longitudinal feed (finishing)

#### ③ Slant machining (roughing)

#### ④ Cross feed (finishing)

## Side turning instruction for GTMH-GX / GTMX-T / GTMH-VT

- To perform side turning with an insert whose groove width is greater than 0.43 set side turning feed rate to 0.03mm/rev or smaller.
- When performing side turning with an insert whose groove width is greater than 0.43 and the feed rate is over 0.03mm/rev (0.1mm/rev max), it is likely that chips will damage grooved sides. In this case, please perform grooving in two or more passes to make room for chips before performing side turning.

## SCRUM DUO BLADE - Carbide Face Grooving Tool

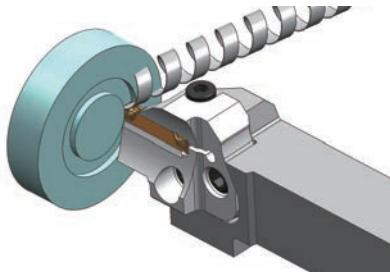

### Features

- New GT Chipbreaker designed for face-grooving**
- The best rigidity in a Modular system**
- Excellent chip-control and great finish**

### Excellent Chip Control

#### Grooving

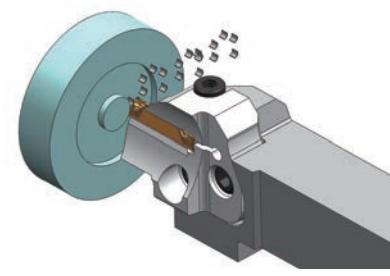

- Excellent chip control and superior surface finish**
- Good chip control without a peck cycle**

|                | NTK:GT chipbreaker | Competitor |
|----------------|--------------------|------------|
| Chip           |                    |            |

### Guidelines

- Choose a blade so that your first target grooving max. OD is between the max. OD and min. OD of the blade.

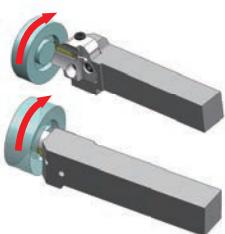

- To make the groove wide, side turn from outside to inside (direction to the center of the work piece)

## Combination of toolholder and blade for Face Grooving

### GTWP-H

### Straight style toolholder

#### Right-hand system

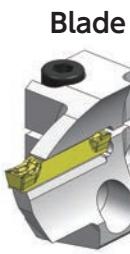

Clockwise rotation (M4 command)

Toolholder

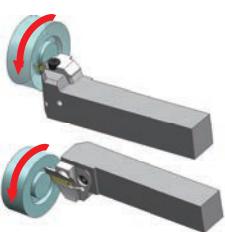

**GTWP R-H**

**GBWPF R**

\* Right-hand toolholder takes Right-hand blade.

#### Left-hand system

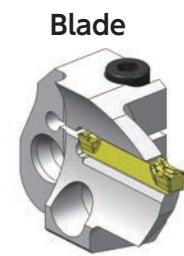

Counter clockwise rotation (M3 command)

Toolholder

**GTWP L-H**

**GBWPF L**

\* Left-hand toolholder takes Left-hand blade.

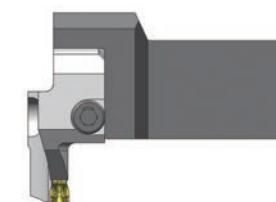

### GKWP-H

### L-style toolholder

#### Right-hand system

Counter clockwise rotation (M3 command)

Toolholder

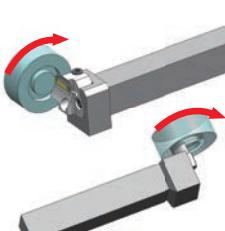

**GKWP R-H**

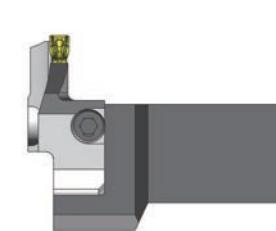

**GBWPF L**

\* Right-hand toolholder takes Left-hand blade.

#### Left-hand system

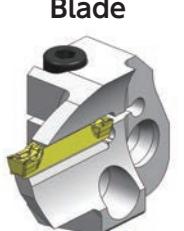

Clockwise rotation (M4 command)

Toolholder

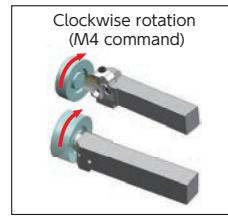

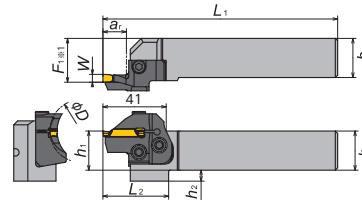

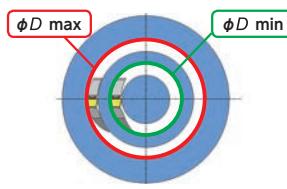

**GKWP L-H**

**GBWPF R**

\* Left-hand toolholder takes Right-hand blade.

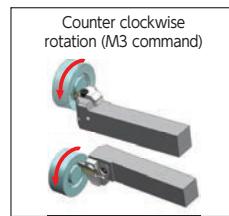

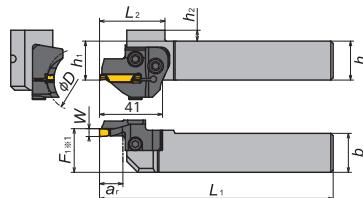

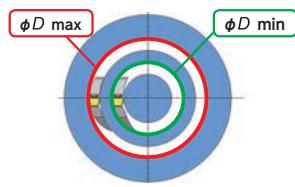

#### ■ Combination (0° Straight style holder and GBWPFR Blade)

- Right-Hand style shown

Right-hand toolholder takes Right-hand blade

## Combination (0° Straight style holder and GBWPFL Blade)

● Left-Hand style shown

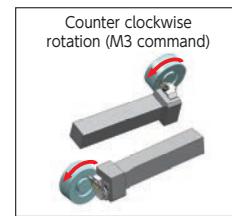

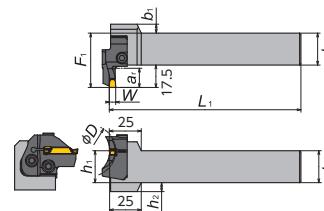

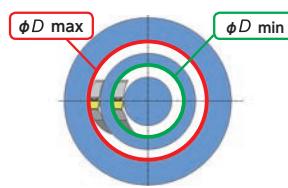

Left-hand toolholder takes Left-hand blade.

# Grooving / Side Turning

## Combination (90° L style holder and GBWPFL Blade)

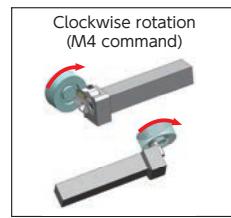

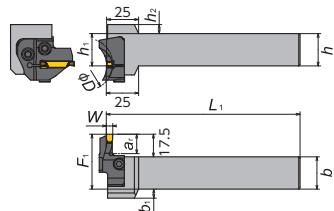

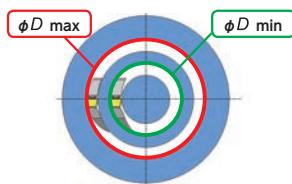

● Right-Hand style shown

Right-hand toolholder takes Left-hand blade.

## Tools and Thread Standards

### American Tapered Pipe (NPT)

| Nominal designation of thread | (Reference) | Pitch (mm) | Applicable inserts                        |
|-------------------------------|-------------|------------|---|
| NPT $\frac{1}{16}$            | 27          | 0.941      |   |
| NPT $\frac{1}{8}$             | 27          | 0.941      |   |
| NPT $\frac{1}{4}$             | 18          | 1.411      | TTP(S)60F <sup>R</sup> /L8 <sup>A/B</sup> |
| NPT $\frac{3}{8}$             | 18          | 1.411      |   |

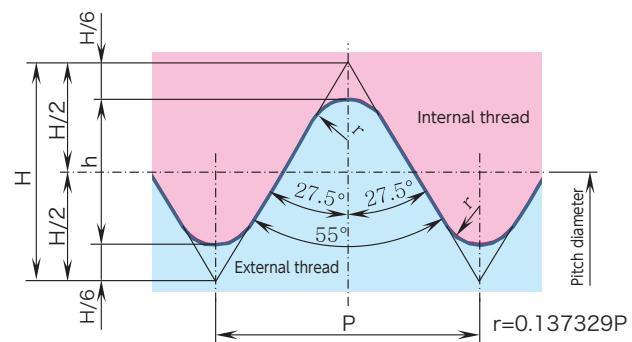

$$H = 0.866P$$

$$h = 0.800P$$

### Parallel Pipe (G, BSPP)

| Nominal designation of thread | (Reference) | Pitch (mm) | Applicable inserts                     |
|-------------------------------|-------------|------------|--|
| G $\frac{1}{16}$              | 28          | 0.9071     |  |
| G $\frac{1}{8}$               | 28          | 0.9071     |  |
| G $\frac{1}{4}$               | 19          | 1.3368     | TTP55F <sup>R</sup> /L8 <sup>A/B</sup> |
| G $\frac{3}{8}$               | 19          | 1.3368     |  |

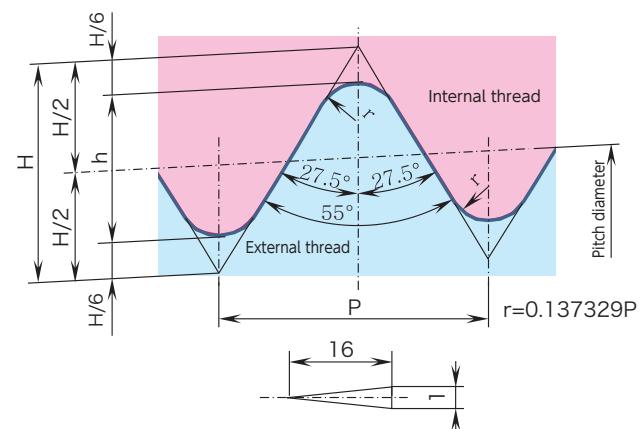

Pitch diameter

$$r = 0.137329P$$

### Tapered Pipe (R, BSPT)

| Nominal designation of thread | (Reference) | Pitch (mm) | Applicable inserts                     |
|-------------------------------|-------------|------------|--|
| R(PT) $\frac{1}{16}$          | 28          | 0.9071     |  |
| R(PT) $\frac{1}{8}$           | 28          | 0.9071     |  |
| R(PT) $\frac{1}{4}$           | 19          | 1.3368     | TTP55F <sup>R</sup> /L8 <sup>A/B</sup> |
| R(PT) $\frac{3}{8}$           | 19          | 1.3368     |  |

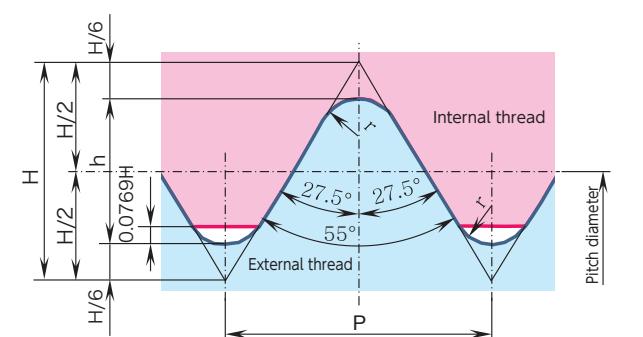

Pitch diameter

$$r = 0.137329P$$

### Whitworth (BSW)

| Nominal designation of thread | (Reference) | Pitch (mm) | Applicable inserts                     |
|-------------------------------|-------------|------------|--|
| W $\frac{1}{8}$               | 40          | 0.64       |  |
| W $\frac{3}{16}$              | 24          | 1.06       |  |
| W $\frac{1}{4}$               | 20          | 1.27       | TTP55F <sup>R</sup> /L8 <sup>A/B</sup> |
| W $\frac{5}{16}$              | 18          | 1.41       |  |
| W $\frac{3}{8}$               | 16          | 1.59       |  |

Pitch diameter

$$r = 0.137329P$$

# Thread Whirling

## Features

**WATCH ON**  
New Double-lead video is on **YouTube**

- NTK's unique patented design technology makes precise and correct inserts possible the first time, *without any redesign or remanufacturing even if it is a multiple-lead thread*
- The sharper cutting edges produce a better surface finish and longer tool life than competitor's inserts

## Form Double-lead or Multiple-lead with Single Pass

|                            | Double-lead threads    | Triple-lead threads   |
|----------------------------|------------------------|-----------------------|
| Work                       | Bone screw             | Worm gear             |
| Work material              | Ti-6Al-4V ELI          | brass                 |
| Work appearance            |                        |                       |
| Insert appearance          |                        |                       |
| Major Dia.                 | φ 4.0mm                | φ 7.0mm               |
| Minor Dia.                 | φ 2.4mm                | φ 4.7mm               |
| Lead [Pitch × No. of Lead] | 3.42mm<br>(1.71mm × 2) | 4.9mm<br>(1.63mm × 3) |

- Can reduce cycle time by more than half
- NTK can achieve what other competitors cannot

## Double-lead Bone Screw Process Example

- 1st thread whirl at taper part
- Rotate the bar 180° and whirl the 2nd thread on same part as 1
- Thread whirl whole straight part
- Thread whirl at very last part to get two-exits, after back of bar has been backed up a half lead (one pitch) and rotated 180°

## Special Item Capability

- Even though almost all bone screw shapes are special, NTK thread whirling inserts can make the correct shape of thread the first time, without any redesign or remanufacturing
- Inserts will be delivered in 5 weeks after the order is received
- Within a 3 week time period, expedite delivery is available with an expedite fee
- Basically NTK thread whirling inserts are ground with topping and coated

## Recommended Cutting Conditions

| No. of teeth<br>Conditions | 9                                 | 6              | 4                                |                                   |
|----------------------------|-----------------------------------|----------------|----------------------------------|-----------------------------------|
| Main spindle<br>RPM        | 10 - 40                           | 10 - 25        | 7 - 15                           | Faster RPM reduces machining time |
| Whirling cutter<br>RPM     | 1500 - 4000                       |                |                                  |                                   |
| Feed Rate                  | Same as thread-lead               |                |                                  |                                   |
| Bar stock<br>$\phi$        | $\sim\phi 10.0$ *                 | $\sim\phi 5.0$ | * For cutter with $\phi 12mm$ ID |                                   |
| Work Material              | Ti-6Al-4V ELI / SUS316 / Titanium |                |                                  |                                   |

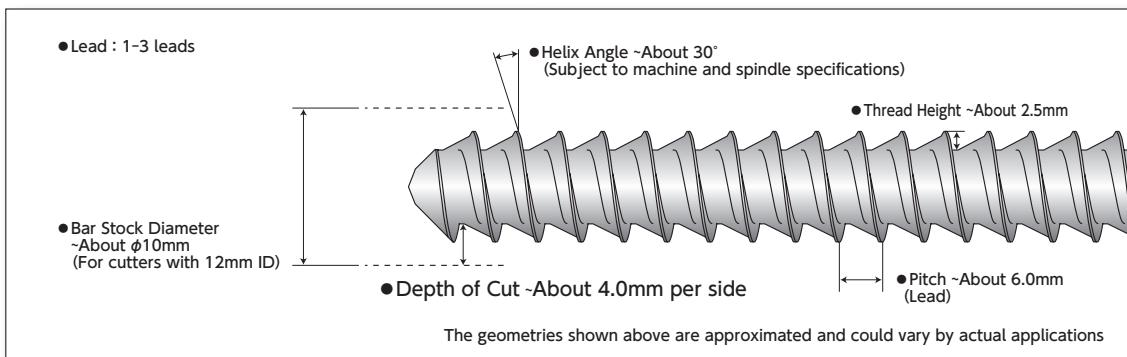

- Formula for calculating thread whirling process time

$$T \text{ (Seconds)} = \frac{60 \times \text{Thread length}}{\text{Main spindle rpm} \times \text{Feed rate (Thread lead)}}$$

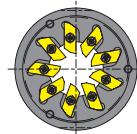

Ex.) Double lead / 50mm length / 2.54 lead (2×1.27 pitch) / 30 rpm

$$T \text{ (Seconds)} = \frac{60 \times 50}{30 \times 2.54} = 40 \text{ Seconds}$$

※1 Would be changed by spindle  
※2 Designed for 6.5mm thickness inserts

#### ■ Spare Insert Holder (Cartridge)

| Item number | No. of tooth | $\phi D_m$ (mm) | Compatible cutters     |
|-------------|--------------|-----------------|------------------------|
| TWC6HP2     | 6            | 12              | For Type 2 and Type 3* |
| TWC9HP2     | 9            | 12              | For Type 2 and Type 3* |
| TWC9HP2-D16 | 9            | 12              | For Type 6             |

Note: Insert holder comes with insert screws and wrench

Insert holder mounting screw is not included

\*Cannot be used for TWC9TS20550P2, TWC9TO12050P2-D18 and TWC9HA22594P2

#### ■ Spare Parts

| Description  |                             | Item number   |
|--------------|-----------------------------|---------------|
| Insert Screw | For 4mm thick inserts       | FSI17-2.2×6.0 |
|              | For 6.5mm thick inserts     | FSI24-2.2×7.9 |
|              | Wrench                      | T-07          |
|              | Insert Holder Mounting Bolt | CS0309-TW     |

## NTK's Unique Attachment System

NTK's whirling insert holder can be attached and detached without removing mounting screws

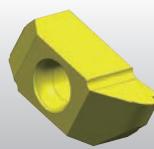

① Loosen the Mounting Screws

② Rotate the Insert Holder 10 degrees

③ Detach the Insert Holder without removing the Mounting Screws

## Basic Insert Grade

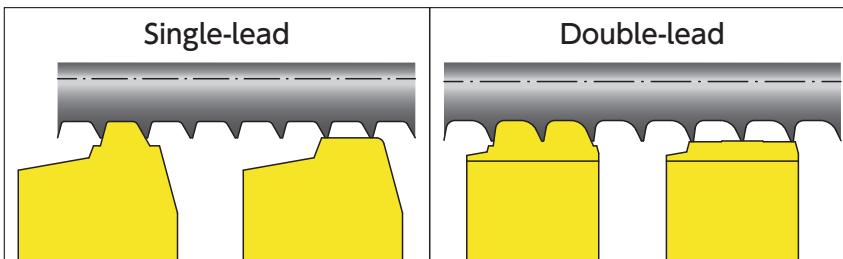

### ZM3

- ZM3 is our basic grade for NTK thread whirling
- ZM3 offers excellent surface finish
- NTK can make inserts with other coatings to meet customers demands

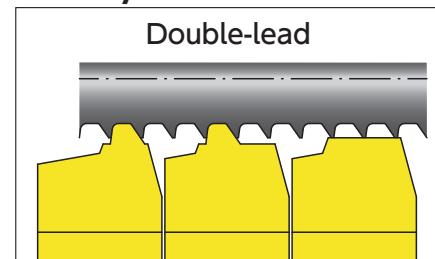

## NTK Experiences and Solutions Example

### For absolute flat on OD

- Two insert combination brings absolute flat on OD to meet the drawing

### For tiny thread

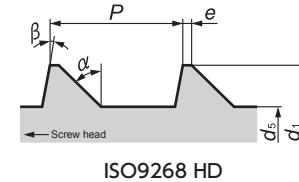

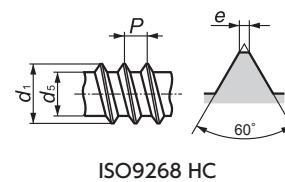

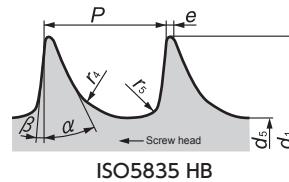

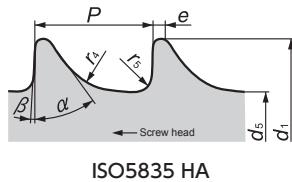

- NTK's Thread Whirling system can machine small diameter multi-lead screws to spec, with lower tool pressure, by using several types of specially designed and accurately ground inserts on the cutter.

## Standard Thread Whirling Inserts (two-sided) for Medical ISO Style Threads

4mm thickness insert

(Note: Must use Thread whirling cutters with 12mm  $\phi Dm$  dimension. See page U18-19 to find  $\phi Dm$  for each cutter.)

## Application Examples

| Double-lead Bone Screw  |                                    |  |       |
|---|------------------------------------|--|-------|
| Work Material : Ti-6Al-4v ELI   |                                    |  |       |
| Bar Stock Dia.  | $\phi 9.5$                         | Number of start  | 2     |
| Major Dia.  | $\phi 4.0$                         | Helix Angle  | 28.5° |
| Minor Dia.  | $\phi 2.5$                         | Hand of thread   | Right |
| Cutting condition   |                                    |  |       |
| Main Spindle Speed (rpm)  | 15                                 | Speed of whirling cutter (rpm)   | 3,500 |
| Lead = Feed (mm/rev)  | 5.5                                | Result   | OK    |
| NTK Thread Whirling   | Dramatically improved productivity |  |       |
| Competitor's Thread Whirling  |                                    | <i>Cannot complete with single pass. Requires feeding stock multiple times and two passes for threading each time.</i> |       |
| NTK thread whirling succeeded in double lead screw machining when one of the major thread whirling suppliers has failed many times. |                                    |  |       |

| Double-lead Bone Screw  |                                    |  |       |
|---|------------------------------------|--|-------|
| Work Material : Ti-6Al-4v ELI   |                                    |  |       |
| Bar Stock Dia.  | $\phi 6.35$                        | Number of start  | 2     |
| Major Dia.  | $\phi 3.0$                         | Helix Angle  | 15.4° |
| Minor Dia.  | $\phi 2.1$                         | Hand of thread   | Right |
| Cutting condition   |                                    |  |       |
| Main Spindle Speed (rpm)  | 11                                 | Speed of whirling cutter (rpm)   | 2,200 |
| Lead = Feed (mm/rev)  | 2.2                                | Result   | OK    |
| NTK Thread Whirling   | Dramatically improved productivity |  |       |
| Competitor's Thread Whirling  |                                    | <i>Cannot complete with single pass. Requires feeding stock multiple times and two passes for threading each time.</i> |       |
| Customer was concerned with stock rigidity and long cycle time. NTK applied three geometry inserts to achieve single pass machining, in dramatically short time. The up-sharp cutting edges and low cutting pressure produced "excellent" surface finish. |                                    |  |       |

| Single-lead Bone Screw  |            |                                |       |
|---|------------|--------------------------------|-------|
| Work Material : Ti-6Al-4v ELI   |            |                                |       |
| Bar Stock Dia.  | $\phi 5.0$ | Number of start                | 1     |
| Major Dia.  | $\phi 2.3$ | Helix Angle                    | 5.3°  |
| Minor Dia.  | $\phi 1.7$ | Hand of thread                 | Right |
| Cutting condition   |            |                                |       |
| Main Spindle Speed (rpm)  | 30         | Speed of whirling cutter (rpm) | 3,100 |
| Pitch = Feed (mm/rev)   | 0.58       | Result                         | OK    |
| NTK Thread Whirling   | 2200 pcs   |                                |       |
| This thread is up to 32 mm length with a small pitch. Cycle time could be increased with a single-point threading tool. NTK's inserts, designed for lower tool pressure, ran 2,200 pcs/corner at 30 rpm of bar stock (F10,800). It only took 110 seconds to finish a 32 mm length thread. |            |                                |       |

| Double-lead Bone Screw        |                                    |  |       |
|-------------------------------|------------------------------------|--|-------|
| Work Material : Ti-6Al-4v ELI |                                    |  |       |
| Bar Stock Dia.                | $\phi 8.9$                         | Number of start  | 2     |
| Major Dia.                    | $\phi 4.57$                        | Helix Angle  | 23.0° |
| Minor Dia.                    | $\phi 3.05$                        | Hand of thread   | Right |
| Cutting condition             |                                    |  |       |
| Main Spindle Speed (rpm)      | 12                                 | Speed of whirling cutter (rpm)   | 2,500 |
| Lead = Feed (mm/rev)          | 5.08                               | Result   | OK    |
| NTK Thread Whirling           | Dramatically improved productivity |  |       |
| Competitor's Thread Whirling  |                                    | <i>Cannot complete with single pass. Requires feeding stock multiple times and two passes for threading each time.</i> |       |

The customer could not get perfect double lead thread form in single pass from other manufacturers. NTK got perfect thread form with a single pass on first trial saving cycle time.

| Single-lead Bone Screw       |             |                                |       |
|------------------------------|-------------|--------------------------------|-------|
| Work Material : 316SS        |             |                                |       |
| Bar Stock Dia.               | $\phi 8.0$  | Number of start                | 1     |
| Major Dia.                   | $\phi 3.45$ | Helix Angle                    | 7.5°  |
| Minor Dia.                   | $\phi 2.67$ | Hand of thread                 | Right |
| Cutting condition            |             |                                |       |
| Main Spindle Speed (rpm)     | 23          | Speed of whirling cutter (rpm) | 2,000 |
| Pitch = Feed (mm/rev)        | 1.24        | Result                         | OK    |
| NTK Thread Whirling          | 2600 pcs    |                                |       |
| Competitor's Thread Whirling |             | 1000 pcs                       |       |

Some thread whirling manufacturers offer 6-teeth or 12-teeth systems, too many teeth cause chip packing issues and more tool pressure. Fewer teeth means greater cycle time. NTK concluded that 9-teeth is the best configuration. Our customers can run 1.5 times faster and get longer tool life.

| Triple-lead Worm Gear   |            |                                |       |
|---|------------|--------------------------------|-------|
| Work Material : Brass   |            |                                |       |
| Bar Stock Dia.  | $\phi 8.0$ | Number of start                | 3     |
| Major Dia.  | $\phi 7.0$ | Helix Angle                    | 14.6° |
| Minor Dia.  | $\phi 4.7$ | Hand of thread                 | Left  |
| Cutting condition   |            |                                |       |
| Main Spindle Speed (rpm)  | 20         | Speed of whirling cutter (rpm) | 3,500 |
| Lead = Feed (mm/rev)  | 4.8        | Result                         | OK    |
| Multi-lead threads, common in the Worm Gear industry are made by a forming or cutting process. The large helix angle is difficult to machine with single-point threading.     |            |                                |       |
| NTK now makes thread whirling inserts for multi-lead threads. Cycle time is reduced with a one pass process and thread form dimensions are stable with the low tool pressure. |            |                                |       |

# SHAPER DUO

Hexalobular Socket

Hexagon Socket

Square Socket

- Now available for Hexalobular(6-lobe) Socket
- Perfect fit for back spindle of Swiss machine
- Achieves good corner edge sharpness

- Less tool pressure than Rotary-Broaching
- Easy to adjust for correct dimension
- Economical double-ended insert bar (Except for Hexalobular)

## Comparison Chart of Hexalobular Socket Machining

|             | Tool Pressure | Cycle Time | Tool Cost | High speed spindle | Program     |   |
|-------------|---------------|------------|-----------|--------------------|-------------|---|
| Shaper Duo  | ◎             | ◎          | ◎         | Not necessary      | Simple      | <ul style="list-style-type: none"> <li>No high speed spindle needed</li> <li>A lot less cycle time</li> </ul> |
| End milling | ○             | ✗          | △         | Necessary          | Complicated | <ul style="list-style-type: none"> <li>Need high speed spindle</li> <li>Time consuming process</li> </ul>     |

- Small diameter endmill driven by high-speed spindle is popular way to create Hexalobular(6-lobe) socket. It has some flexibility but needs high speed spindle unit and it is a time consuming process.
- SHAPER DUO can make Hexalobular(6-lobe) socket faster and simpler.

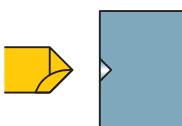

## Comparison Chart of HEX Socket Machining

|             | Tool Pressure | Cycle Time                                       | Flexibility | Tool Cost |  |
|-------------|---------------|--|-------------|-----------|--|
| Shaper Duo  | ◎             | △<br>* Can be off-set by over-wrapping operation | ○           | ◎         | <ul style="list-style-type: none"> <li>Less tool pressure-especially on small diameter parts</li> <li>One size can cover several socket sizes</li> </ul> |
| Broach Tool | △             | ○  | ✗           | △         | Need to have tools for each socket size  |

- Rotary-broach is an efficient way for Hexagon socket. But tool pressure is high and often it pushes part too hard.
- SHAPER DUO system enables less tool pressure and provides better tolerance with less cost.

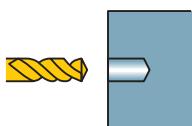

## Process Chart

### ① Center drilling

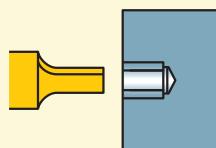

Make a center hole which is smaller than pilot hole drill.

### ② Drilling (Pilot hole)

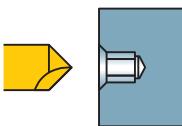

Select a drill with same or smaller (0 ~ 0.1mm) dia. as AF and machine a bit deeper because burrs may cause chipping on shaper insert

### ③ Shaper tool

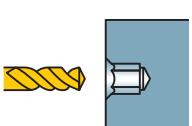

Machine socket rotating 60 degrees 6 times

### ④ Chamfering

Chamfer with the same pilot hole drill as ①

### ⑤ Deburring

Finish and deburr with the same drill as in process ②  
★Reduce cutting conditions due to heavy interruption

※Caution: Due to the tolerance, it might not fit into the holder which is made by other company.

Sleeves ➔K8 • K9

● : Stock

## SHAPER DUO Set-up Instructions -Hexagonal

### Outside machine

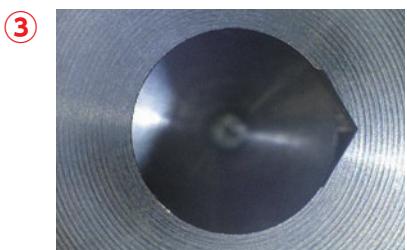

- Set the insert bar in the sleeve and check the parallelism of the flat portion of the sleeve and the insert bar.
- Minimize the overhang of the insert.

### Inside machine

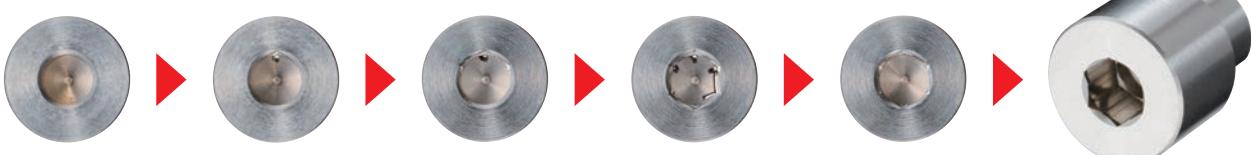

- Set the sleeve into the tool post and make sure the sleeve is set parallel.
- Minimize sleeve overhang.

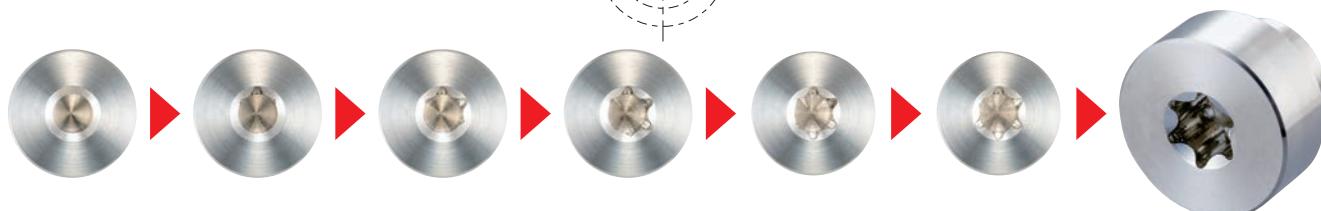

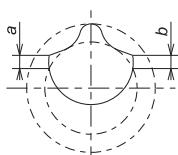

- Increase the number of machining passes with smaller depth of cut if the insert chips with large depth of cut.  
( $0.025\text{mm} \times 5\text{pass}$  is recommended)  
No chamfering process is required for measuring purpose.
- Measure the length of both [a] and [b] with comparator or magnifier.
- Adjust centerline height by rotating the sleeve until you get the same length for [a] and [b]. (The difference should be less than  $0.02\text{mm}$ )  
\*If the straight is not seen with increased passes, please reset the insert and the sleeve.  
Please make sure both the insert and the sleeve are set up correctly.

### ④ Machine Hexagonal shape

- Run full HEX machining program.

### For Hexalobular machining Basically same as Hexagonal socket

## Hexagon Socket Programming Code Examples from Machine Builders in Metric

**Hex socket size :** Hex 3.0mm, AF(Final "X" position) 3.46mm, Depth 3.5mm

**Pilot drill diameter :** 3.0mm   Starting "X" position : **2.95mm** (see chart on J3)

**Insert :** SSP030N1940N TM4

**Parameters :** Feed 3000mm/min, DOC(Roughing) 0.025mm, (Finishing) 0.005mm

### ■ Programming tips

- Make a program considering final " X "position.

- #1 Final "X"position : 3.46mm(AF)
- #2 Finishing position of roughing : 3.46–0.01 (Finishing) =3.45mm
- #3 Calculate total DOC for roughing : 3.45–3.0(Pilot hole)=0.45mm
- #4 Determine number of cuts : 0.45÷0.05(DOC for Dia.)= 9.0 + 2 (round down to whole number and add "2" for program adjustment)  
→ Roughing sequence runs 11 times
- #5 Set starting point : 3.45–(0.05×(11–1)) = 2.95mm : must subtract by "1" for program adjustment

I. Index the sub-spindle 6 times in 60 degree increments.

II. Specify the coordinate system shift command (in X axis direction) for the tool. [2 x f, where f is tool dimension located in catalog].

• A positive direction shift is recommended for easier programming.

III. Execute the positioning of the tool.

• X position should be smaller than pilot drill diameter.

• Z position should be offset 2.0 mm from material to achieve program feed rate.

IV. Go to the Sub-Program #1.

• Sequence runs 11 times. First cutting point X2.95 and final cutting point X3.45, with 0.05 DOC (for diameter) each time.

A. Specify dwell time. This allows the program and machine to stay synchronized.

B. Cut into part 3.5mm. F3000 is recommended feed to be used for most materials; including Titanium Alloy and Stainless Steel.

C. This code backs off the tool with an angle greater than 6 degrees (10 degrees used in example). See page J3.

D. Return to the X position + 0.05mm (the DOC for diameter).

V. Go to the Sub-Program #2, for finishing sequence.

E. Finishing operation with 0.005mm DOC (X 3.46) is recommended for better surface finish.

## Hexalobular Socket Programming Code Examples from Machine Builders in Metric

**Hexalobular socket size :** Hexalobular T15 (depth : 3.81mm)

**Pilot drill diameter :** 2.3mm

**Insert :** SSP050N43T15 TM4

**Parameters :** Feed 3000mm/min, DOC(Roughing) 0.025mm, (Finishing) 0.005mm

### ■ Programming tips

- Make a program considering final “ X ”position.

- #1 Final “ X ”position : 3.35mm(A)
- #2 Finishing position of roughing : 3.35 – 0.01 (Finishing) = 3.34mm
- #3 Calculate total DOC for roughing : 3.34 – 2.3 (Pilot hole) = 1.04mm
- #4 Determine number of cuts : 1.04 ÷ 0.05(DOC for Dia) = 20.8 + 2 (round down to whole number and add “2” for program adjustment)  
→ Roughing sequence runs 22 times
- #5 Set starting point : 3.34 – (0.05 × (22 – 1)) = 2.29mm : must subtract by “1” for program adjustment

- V. Go to the Sub-Program #2, for finishing sequence.
- E. Finishing operation with 0.005mm DOC (X 3.35) is recommended for better surface finish.

## SHAPER DUO Troubleshooting

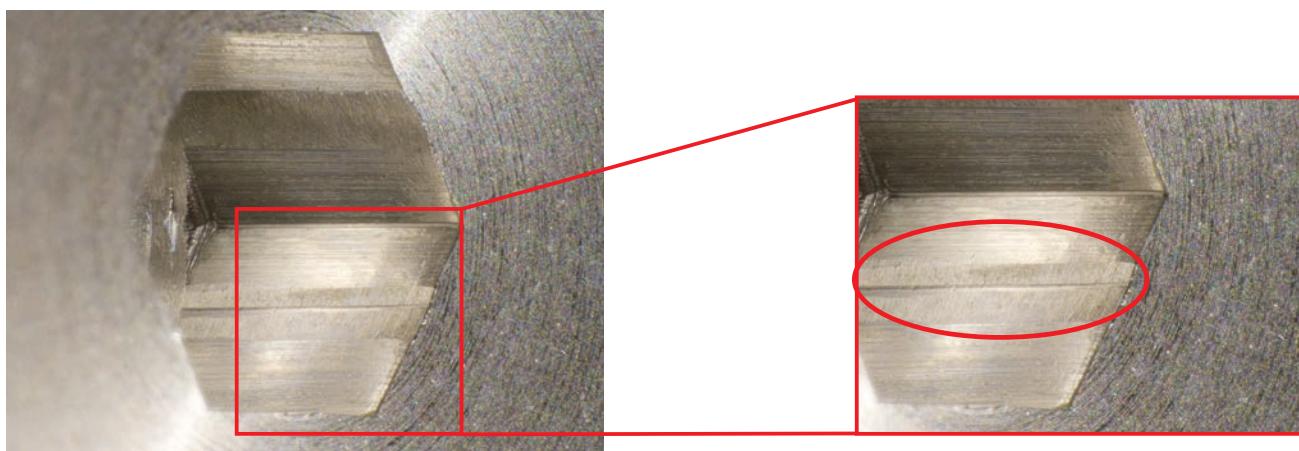

### Problem: Step on sides

Cause: Incorrect tool set-up  
(Center-line shift)

Solution: Machine one angle and make sure both [a] and [b] lengths are identical, rotating the sleeve if necessary

### Problem: Wall dented

Cause: Pilot hole remaining  
Solution: Need pilot hole tool's offset

### Problem: Wall tapered

Solution: ● Smaller depth of cut  
● Less tool overhang

### Problem: Chuck is slipping / Insert chipped

Solution: ● Run at 3000 mm/min feed rate  
● Smaller depth of cut

- 3000 mm/min feed rate can cover most materials including Titanium alloy and Stainless steel.
- Too slow or too fast of a feed rate may cause excessive tool pressure for the workpiece and tool.

## ■ Through hole

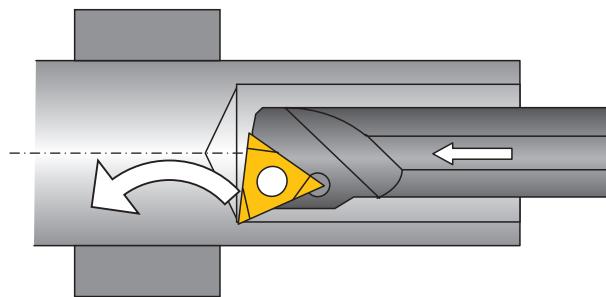

For chip control : chips can be evacuated forward

## ■ Blind hole

Blind hole due to bar stock

Typical inserts direct flow chips forward. Then packed chips damage and break cutting edge

F05, F1, and FG chipbreakers will direct chips backwards and eliminate chipping on inserts

\*Note: Use right-hand inserts with F05, F1 and FG chipbreaker for right-hand boring bars

※1 With an insert having the min. machining diameter of  $\phi 3\rightarrow 12.75\text{mm}$  With an insert having any min. machining diameter than  $\phi 3\rightarrow 12.75\text{mm}$

※2 With an insert having the min. machining diameter of  $\phi 3\rightarrow 6.35\text{mm}$  With an insert having any min. machining diameter than  $\phi 3\rightarrow 6.75\text{mm}$

※3 With a short type insert mounted, the over all length(L1) becomes reduced by apporox. 4.0mm

※4 With a short type insert mounted, f dimension becomes reduced by apporox. 4.0mm

※5 Compatible with 16mm / 22mm round shank DS Series holders. DS-Sleeve⇒

Figure-1

S.FS-S type

Chipbreaker for sharp cutting

### SBFB-F Evacuate chips backward

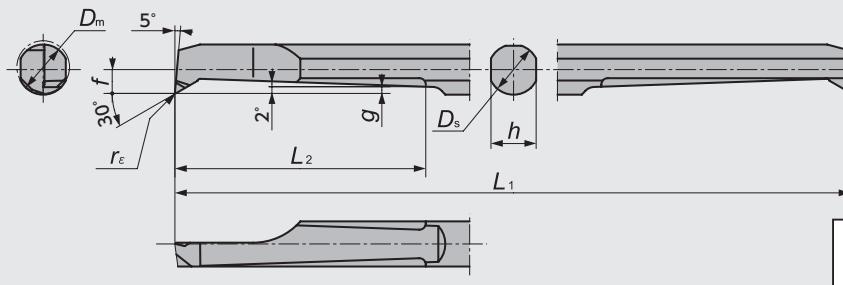

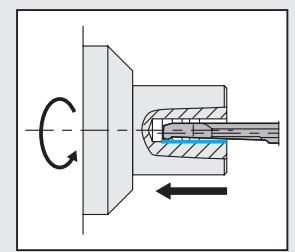

Figure-2

S.FB-F type

Back taper

Wide area of chippocket

### SBFS-H Flat type (without chipbreaker)

Mirror finish

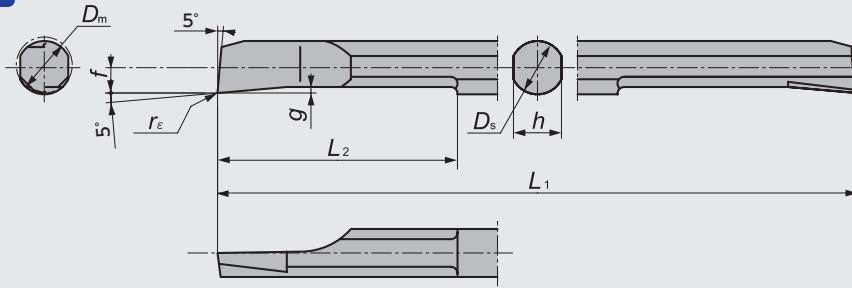

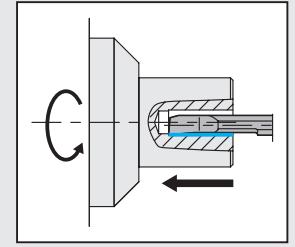

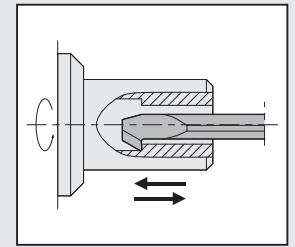

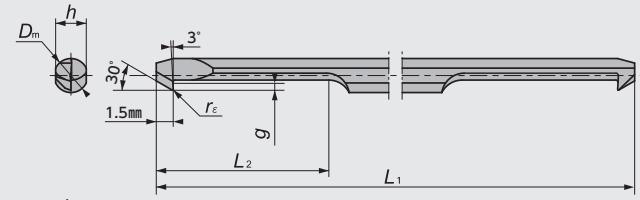

Figure-3

## SBB Series (ID Back Turning)

### SBB (Minimum Bore Diameter 3.0mm)

Short type  
two-sided

Long type  
single-sided

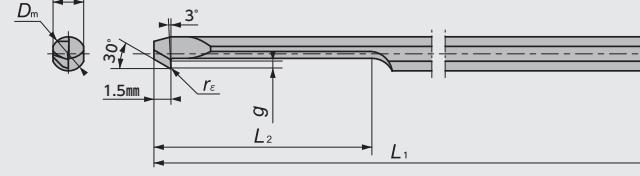

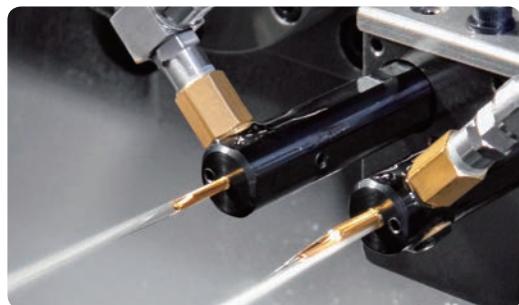

Figure-4

## Quick-change Coolant Components

### Coolant hose for connecting with R1/8

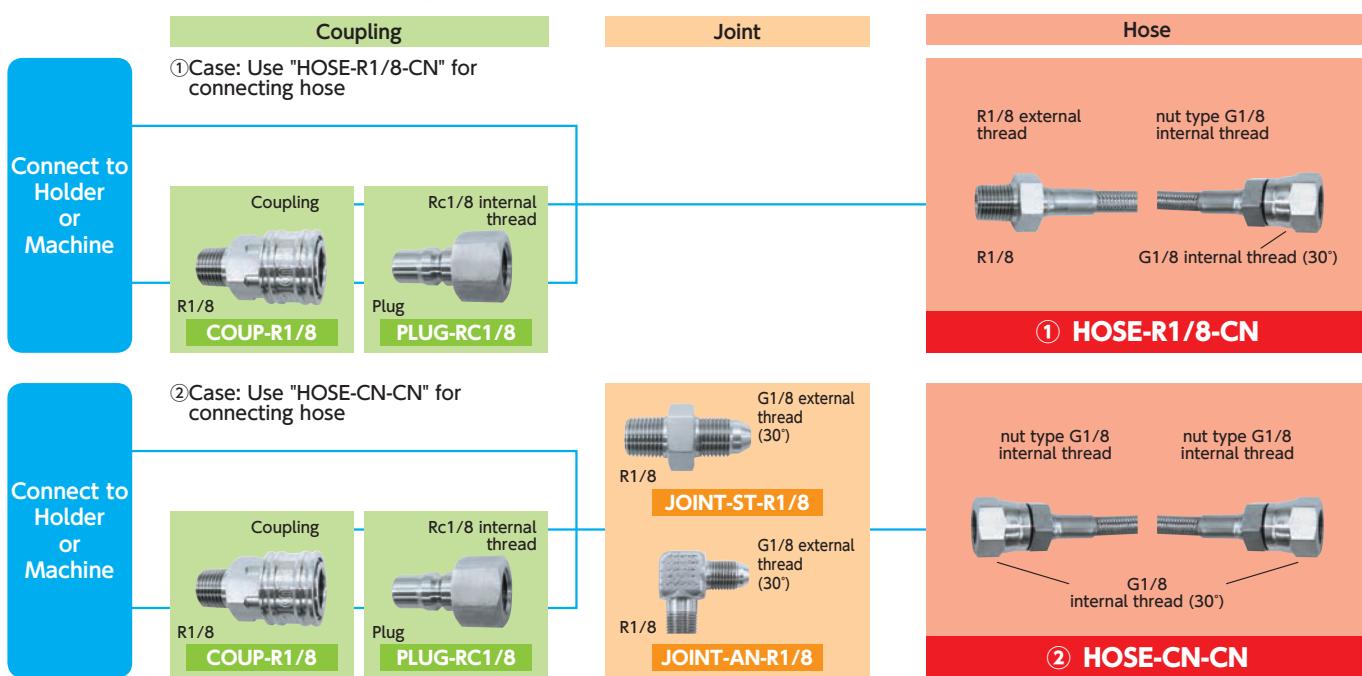

- Line up a wide range of coolant hose length
- Available for 2 types of coupling and conversion joint
- Working pressure MAX. 20.6 MPa
- High quality flexible stainless steel braided hose

Ex. of connecting ①

| Parts            | P/N              |
|------------------|------------------|
| Conversion joint | JOINT-ST-R1/8    |
| hose             | HOSE-R1/8-CN-400 |
| Plug             | PLUG-RC1/8       |
| Coupling         | COUP-R1/8        |
| Extension joint  | SCJ-R1/8-RC1/8-L |

\*1 To prevent hitting the coolant connecting part of holder from the gang tool post, "L1" dimension length is set longer.  
NPT: ANSI/ASME B.1.20-1983(National Taper Pipe)

Connect to Holder or Machine

## Suitable use of Coupling and Joint

- Detach Hose frequently  
⇒ Coupling is suitable
- Less detach Hose  
⇒ Joint is suitable

Connect to Holder or Machine

## Conversion joint (nut G1/8 internal thread)

# STICK DUO HYPER

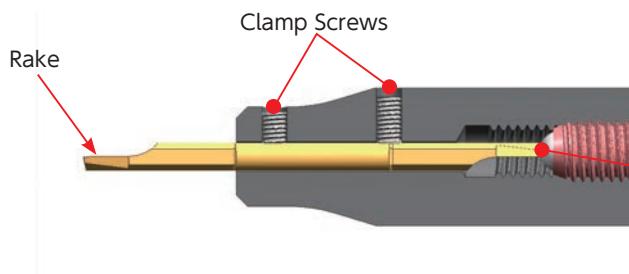

## - Sleeves for ID Boring with Adjustable Overhang Mechanism -

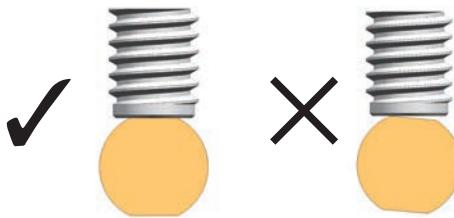

### ■ Can Index boring bars like inserts

### ■ Installation Procedure for STICK DUO Hyper

**Caution:** Improper installation dramatically increases the chance of chipping cutting edge

Improper clamping of boring bar causes unstable centerline height and offset

① Position the overhang adjustment ball screw to determine overhang amount

② Slide the ball screw fixture to secure the ball screw location

③ Insert a boring bar (tool)

Note: Make sure to insert the boring bar correctly so that the rake face is toward the side where the clamp screws are located

④ Secure the boring bar by tightening the positioning clamp screw ► Recommended Clamping Torque: 2.0N·m

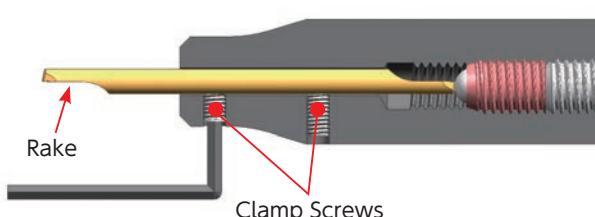

\*\* Make sure to clamp the boring bar so that the flat surface of the bar makes proper contact with clamp screws

⑤ Secure the boring bar by tightening the remaining clamp screws ► Recommended Clamping Torque: 2.0N·m

⑥ Even if 4 and 5 cannot be performed due to tool clearance and layout, the tool can be used by only securing the side clamp screw

Once the initial setup is complete, repeat the above procedures 3 thru 5 for each index

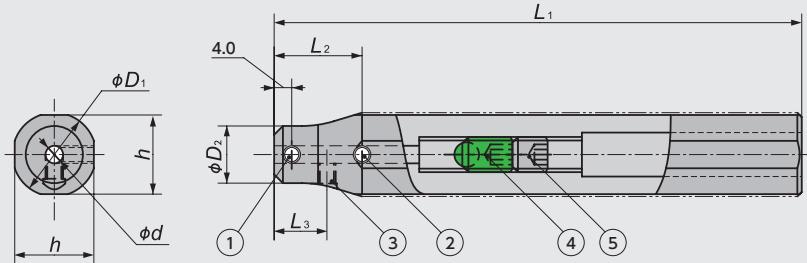

### ■ When the tool is installed upside down

Toolholder must be installed so that clamp screws and rake of the tool face toward the same side

## ■ STICK DUO HYPER - Sleeves for ID machining -

### HY-NBH

Please refer to  $\phi d$  to find correct-size inserts (bars)

※Caution: Due to the tolerance, it might not fit into the holder which is made by other company.

# Mogul Bar

High rigidity boring bars

## Features

- High rigidity + Minimal flat widths  
Reduce vibration
- Large clearance for improved chip evacuation
- All Mogul Bar boring bars are coolant through

## Recommended amount of overhang

Steel Shank       $L/D \leq 5$

Carbide Shank       $L/D \leq 7$

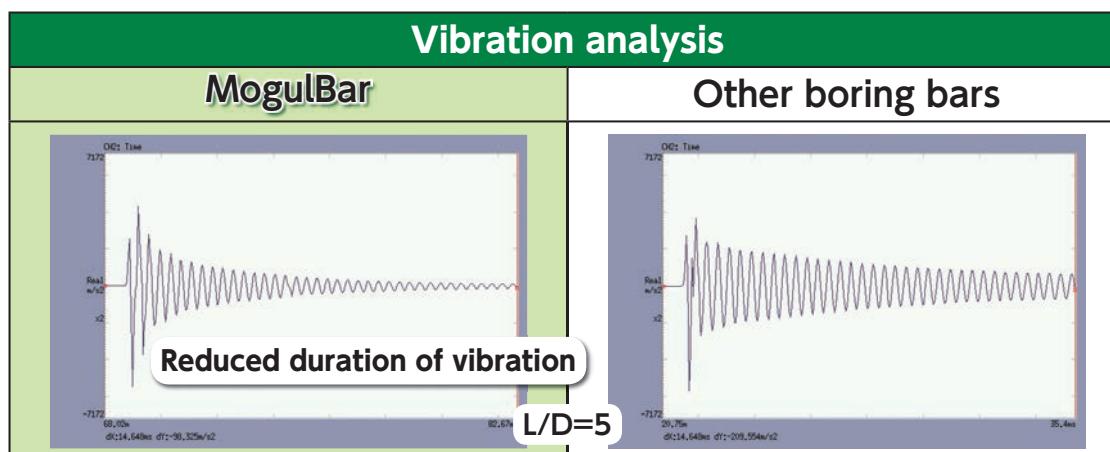

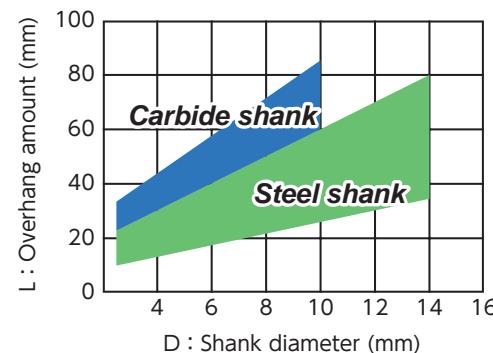

L : Overhang

D : Shank diameter

[Cutting condition example]

Work materials: Alloy steel, stainless

$V_c = 80\text{m/min}$     $f = 0.05 \sim 0.1\text{mm/rev}$     $a_p = 0.1 \sim 0.5\text{mm(DOC)}$    WET

Note: Assuming a 100N load is applied. An equal amount of force was applied to both bars for vibration analysis.

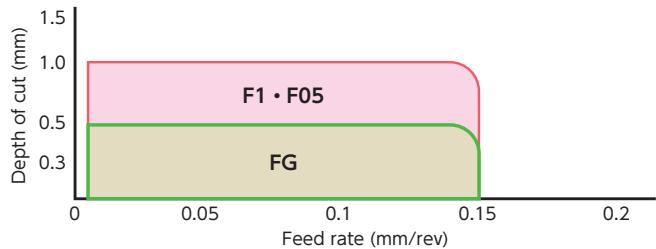

Boring bar used in above analysis: S08H-STUPR09D10-OH

## F Chipbreakers - Evacuate chips BACKWARD

- F chipbreakers allow chips to evacuate backward
- Combination of the F-chipbreakers and Mogul Bar delivers the best performance

### ■ Recommended Cutting Condition Range

## F Chipbreakers - Features

|   | DOC<br>(mm)  | Feed(mm/rev) |     |

## Boring bar adaptors.

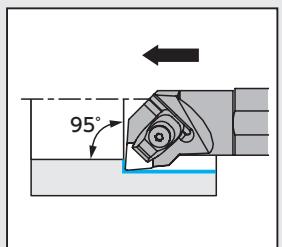

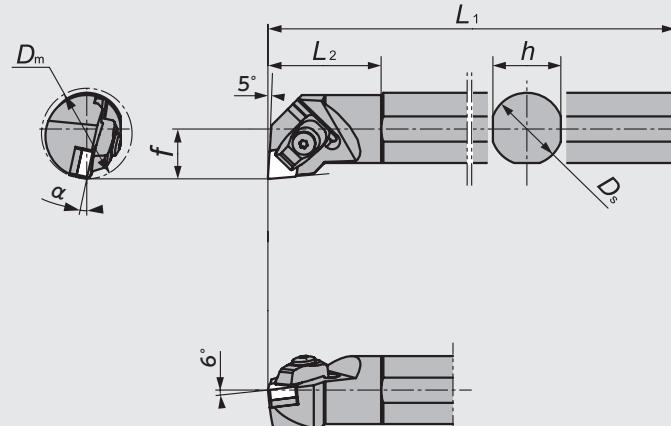

This is an adaptor for mounting boring bars on a tool post. Use this adaptor especially for carbide shank bars to eliminate any possibility of breakage.

| Code No. | Adaptor P/N | Stock | Dimensions (mm) |     |     |       |       |       | Applicable holder      |

## Machining HRSA Materials with BIDEMICS and Ceramics

*Solutions for the Aerospace & Energy Industries*

### BIDEMICS - Game Changer

- 480m/min Speed Capability
- Double tool life at whisker's speed range

JX1

#### ■ Features

- Up to 480m/min speed capability
- Much longer tool life at Whisker ceramics' speed range
- Superior surface finish vs. Whisker ceramics

#### ■ Work Materials

- Inco 718 • 718 Plus
- Powdered metal
- Inco 625 • Rene

→C2

JP2

#### ■ Features

- 10 to 15x speed capability vs. carbide
- Better wear resistance and notching resistance than CBNs
- Superior surface finish to Carbide or CBN

#### ■ Work Materials

- Inco 718 • 718 Plus
- Powdered metal • Inco 625 • Rene

→C2

SX7

#### ■ Features

- Can run at same cutting condition as whisker ceramics
- Best grade for high-speed milling

#### ■ Work Materials

- Inco 718 • Inco 625
- Waspaloy • Udimet 720

→C15

SX3

#### ■ Features

- Excellent wear resistance and toughness. Wide range of HRSA machining applications: Roughing with scale - semi finishing turning.
- Able to machine even the newest generation of HRSA work materials (like Rene) as well as most common HRSA materials; such as Inconel 718.

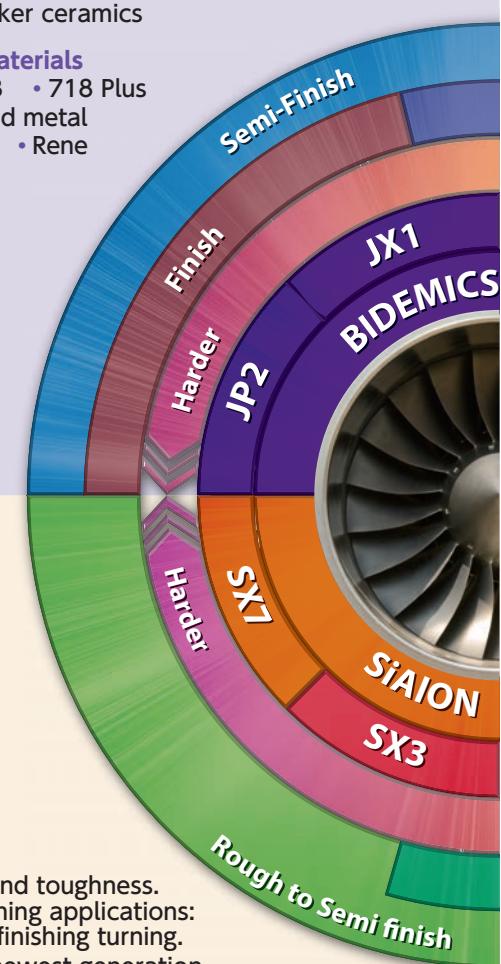

#### ■ Work Materials

- Inco 718 • 718 Plus
- Powdered metal • Inco 625
- Rene

→C14

### SiAION - Workhorse

- Durable for scale to semi-finish machining

WATCH ON  
YouTube

## JX3

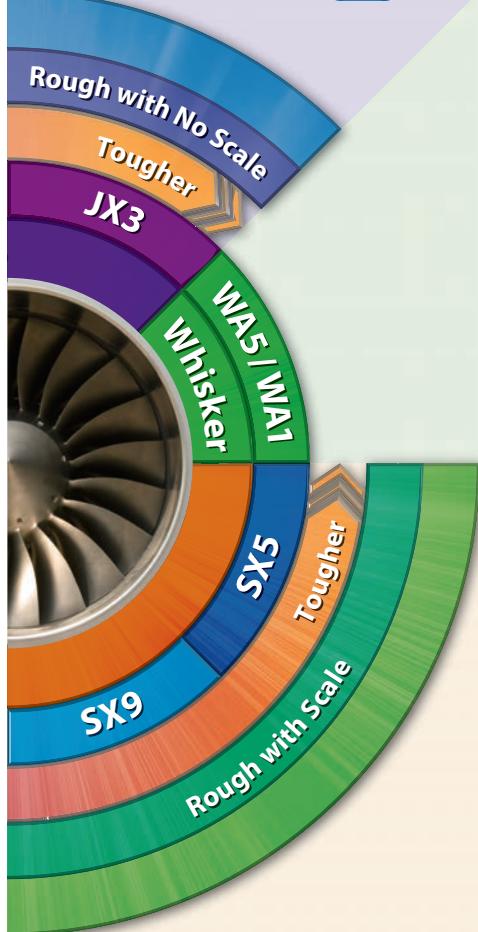

**■ Features**

- Added toughness in BIDEMICS
- Same speed capability as JX1

**■ Work Materials**

- Inco 718 • 718 Plus • Powdered metal
- Inco 625 • Rene

→C2

Application Guidance  
Milling Guidance→L4  
→N4Turning Guidance  
Grooving Guidance→L6  
→A17

## WA5 / WA1

**■ Features**

- Better flank wear resistance compared to SiAlON ceramics
- Better notching resistance compared to competitor's whisker ceramics

**■ Work Materials**

- Inco 718 • Inco 625

→C16

## Whisker - Versatile Player

● Productivity and reliability

## SX5

**■ Features**

- Best grade for scale and interruptions
- Best grade for machining high-cobalt alloys

**■ Work Materials**

- Waspaloy • Udimet 720
- 718 Plus • Rene 41

※ Production by order.

## SX9

**■ Features**

- Extreme toughness makes higher feed and heavier DOC machining possible
- Best grade for machining Inco 718 with scale

→C15

**■ Work Materials**

- Inco 718 • Inco 706
- Inco 713 • Rene

## Guidelines For Success

### ■ Keys to successful machining of HRSA Materials

- NTK's BIDEMICS and ceramics deliver extremely high productivity to heat resistant alloy machining
- BIDEMICS offer excellent flank wear resistance and SiAlON ceramics provide exceptional notch wear resistance
- BIDEMICS enable ultra high-speed machining with outstanding surface finishes
- Stable machining can be performed by optimizing cutting conditions and tooling

### ■ Use strong insert shapes

Maximize geometry for strength productivity.

**Strength Increases**

### ■ Use largest nose radius

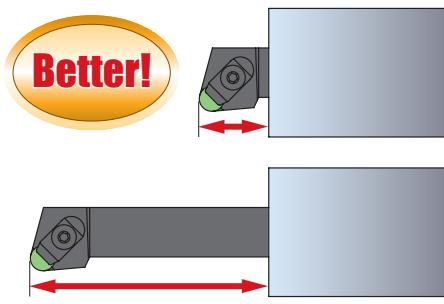

Maximize insert nose radius for strength and longer tool life.

Take into account that the larger the nose radius the greater the tool pressure.

Typical application machining heat resistant alloys use a RNGN1207 insert for roughing and CNGA1204 style for finishing.

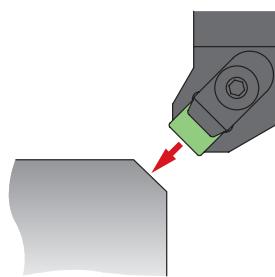

### ■ Minimize overhang

Too much overhang may cause chatter or insert breakage.

### ■ Pre-chamfering

Pre-chamfering the part reduces the potential for insert chipping or breaking upon the entry or exit point of work material.

### ■ No dwelling

Inserts wear out when rubbing the part instead of cutting.

### ■ Coolant

When turning with BIDEMICS, SiAlON and Whisker a flood coolant condition should be used. In some cases where a high interruption is encountered it may be best to shut off the coolant. No coolant should be used while milling with SX3, SX7 and SX9.

### ■ Edge preparations

Typical HRSA machining requires the insert cutting edge to be sharp. Using a slight T-land or honed edge is also effective to reduce notching, flaking and built up edge.

## Troubleshooting

### Insert Breakage

- Cutting Condition → [1] → L8
- Programming at Scale → [2] → L9
- Insert Grade → Choose tougher grade
- Insert Shape → [6] → L11

● 1st Choice

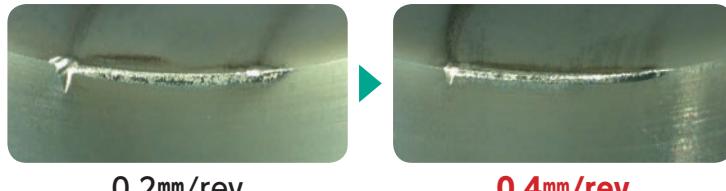

● 2nd Choice

### Test Results

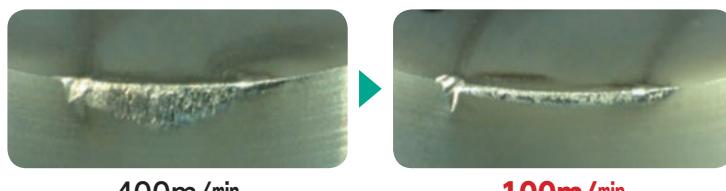

#### [a] WA1 : Increase cutting speed

#### [b] SX7 • SX3 • SX9 • SX5 : Increase feed rate

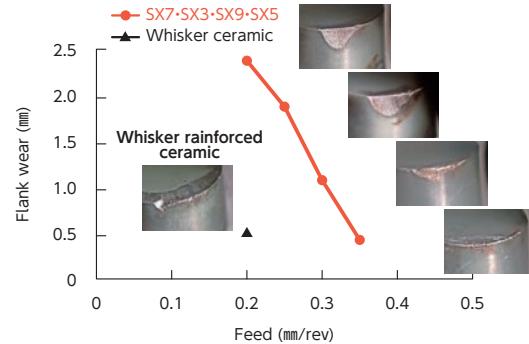

#### [c] SX7 • SX3 • SX9 • SX5 : Decrease cutting speed

#### [d] SX7 • SX3 • SX9 • SX5 : Increase feed rate

Feed rate increased decreases wear amount of SiALON

##### Cutting condition

Work material : Inco718  
Insert shape : RNGN120700

Cutting Speed : 250m/min  
Depth of Cut : 2.0mm  
WET

In some cases, in order to increase the wear resistance of **SX7** & **SX3** & **SX9** & **SX5**, the feed must be increased. By increasing the feed and utilizing the toughness of **SX7** & **SX3** & **SX9** & **SX5**, the inserts are off the part sooner causing less wear. Increasing the feed also decreases cycle time and improves productivity and profitability.

Note : Speed and feed rates shown are recorded test data and should not be thought of as recommended cutting conditions.

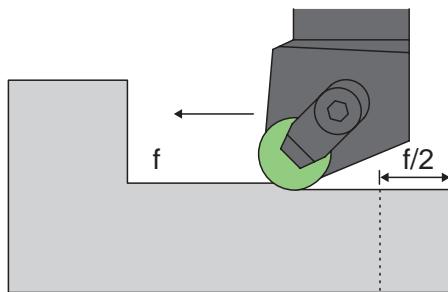

Note : Be careful to reduce the feed rate by 25%, when going into a corner.

## ■ Troubleshooting (continued)

### 2 Scale machining

**When the insert breakage happens at the beginning of cutting scale, it might be caused by too high cutting speeds & feeds**

Knowing the hardness of the work material before the cutting begins may make all the difference between success or failure. Many times on the shop floor the operator does not know the part hardness. If this information is not known, then more time is needed in the testing procedure trying to find the optimum speed and feed range. As the material hardness increases, speed should decrease. Also, parts that have a forged scale work surface require a 25% speed and feed reduction until the scale is gone. This type of programming change will reduce the potential of notching as a failure mode.

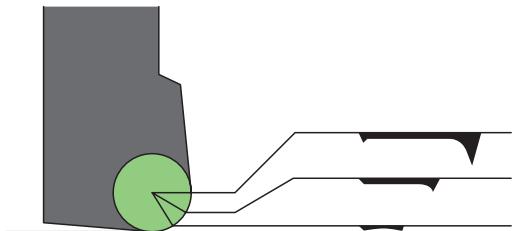

### 3 Depth of Cut

#### Depth of Cut Notching

This mode of insert failure is typical when machining heat resistant alloys. It must be controlled to prevent a catastrophic failure of the insert's cutting edge. The following information should help to minimize this problem.

#### Depth of Cut

Prime consideration should be given to the effect of depth of cut upon insert tool life. There is a direct relationship between the insert radius size and the maximum depth of cut which should be taken. See the chart below for recommendations.

#### ■ Recommended Depth of Cut Range (mm)

| Round insert | Maximum DOC | *Insert radius | Maximum DOC |
|--------------|-------------|----------------|-------------|
| φ 6.35       | 1.5...Less  | 0.8            | 0.2...Less  |
| φ 9.525      | 2.3...Less  | 1.2            | 0.3...Less  |
| φ 12.70      | 3.2...Less  | 1.6            | 0.4...Less  |
| φ 25.40      | 6.4...Less  | 2.4            | 0.6...Less  |

\*OPTIMUM DOC. IS 5-15% OF THE INSERT DIAMETER \*BASED ON 0° LEAD ANGLE

### 4 Lead Angle

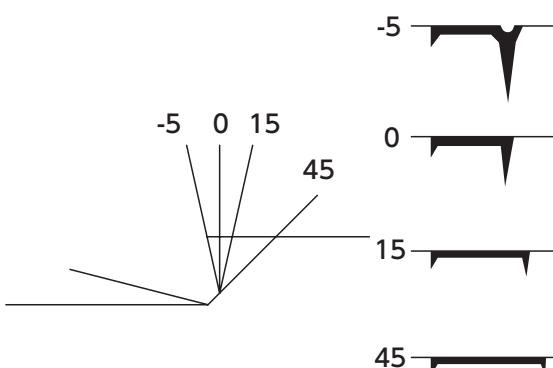

#### Lead Angles

When cutting heat resistant alloys consideration should be given to using the largest lead angle possible. When using large lead angles, the cutting forces are spread over a larger surface area of the insert. This will also improve tool life and surface finish while reducing notching. As the lead angle increases the chip will flow more easily.

#### Feeds

Utilize the superior strength characteristic of SX7, SX3, SX9, SX5 SiAlON ceramics. If excessive wear is encountered while machining heat resistant alloys, increase the feed rate thus minimizing the cutting time.

- Typical insert wear pattern showing the effect of various lead angle changes and the resulting increase of depth of cut notching

## Troubleshooting (continued)

### Programming

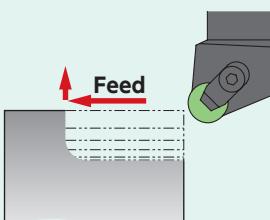

#### Rough

##### Same Depth of Cut

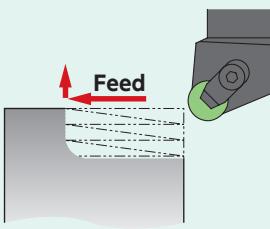

Note)  
Notch wear on the insert cutting edge as shown is the result of multiple passes being taken at the same depth of cut. This type of wear will minimize tool life. The following programming examples will help to minimize this mode of failure.

##### Varying Depth of Cut

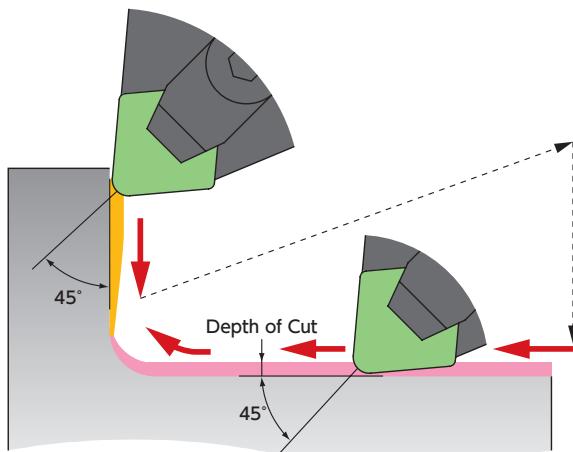

Note) Another programming change that may help to reduce notching is by varying the depth of cut. Again, the same principle applies, notching takes place at various points on the cutting edge rather than concentrated at one point.

##### Ramping

Note) Programming " Ramping " cuts in the same cutting direction is one of the best procedures to minimize notching. By varying the DOC, wear is distributed over the entire cutting edge not on one point.

#### Finish

$$\bullet \alpha = 45^\circ$$

| Insert radius | DOC (mm) |
|---------------|----------|
| 0.4           | 0.12     |
| 0.8           | 0.23     |
| 1.2           | 0.35     |
| 1.6           | 0.47     |
| 2.4           | 0.70     |
| 3.2           | 0.94     |

Note) The correct procedure is to take more material off during the previous roughing application.

Then remove the amount of stock suitable for the nose radius of the insert by staying

**below the 45° mark of the corner radius.**

This will minimize notching and allow a cut from both directions.

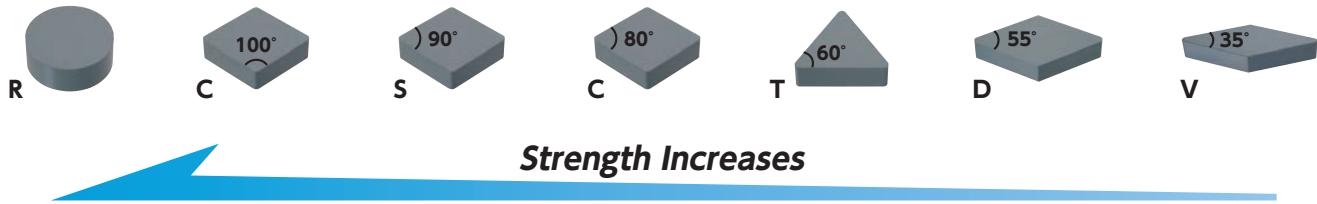

#### Depth of Cut

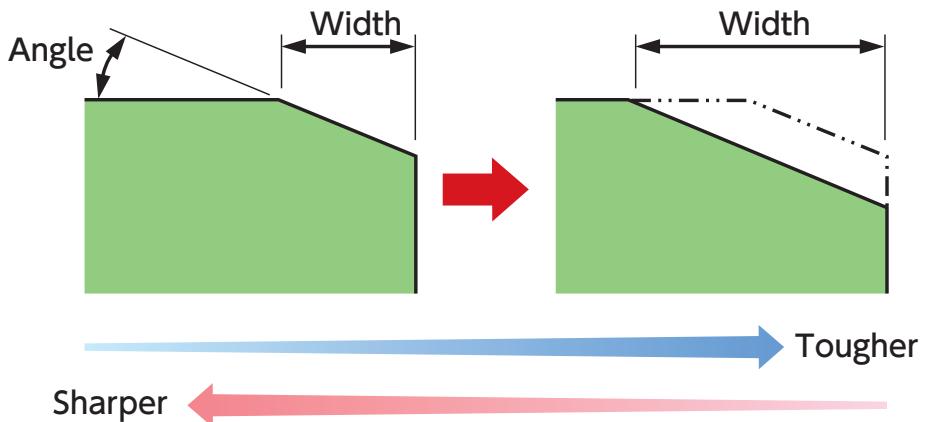

Better

## ■ Troubleshooting (continued)

### 6 Insert shape

### 7 Edge preparation

- Slightly larger T-land on the edge preparation may eliminate flaking.

### 8 Eliminate chatter

Chatter problem is often caused by too much cutting pressure when machining heat resistant alloys especially in profiling or grooving. A non-rigid machine may cause excessive insert wear or insert breakage.

- Increase speeds and decrease feeds
- Use harder grade with higher speed
- Use smaller I.C round insert, or smaller nose radius
- Reduce insert nose radius
- Use positive insert
- Reduce lead angle
- Reduce edge preparation or use sharp edge
- Minimize overhang
- Try a heavy metal boring bar

## Guideline for grooving HRSA materials

BIDEMICS / Ceramic grooving inserts provide high speed capability to your process. Whisker ceramic is the most versatile option in this category. NTK also offers BIDEMICS and SiAlON grades for more productivity and stability.

|             | JX1  | JX3                        | SX3                             | SX7             | SX5 | WA1/WA5 |

## Machining Mill Rolls with NTK Ceramics and CBNs

### Features

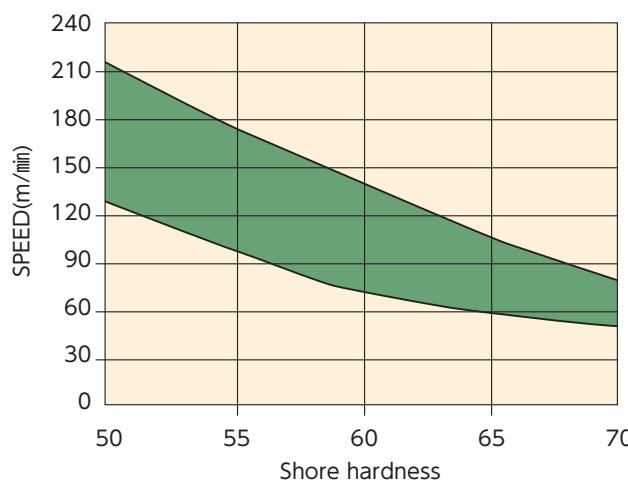

- In addition to our general purpose ceramic HC2 grade, NTK offers HC7 for higher productivity**
- WA1's wear resistance is an advantage when roughing carbide and hardened rolls**
- ZC7 covers a wide range of applications such as carburized or induction hardened steels.**

### Recommended Cutting Conditions

## Key Points for Machining Mill Rolls

- Hardness of the roll is an important factor. As the roll gets harder the Cutting speed should be reduced.
- RCGX style inserts are the preferred insert for rigidity and cost savings.
- If making multiple passes with one edge, vary your DOC to move the wear on the insert edge and reduce notch wear.
- If you encounter chatter, increase your feed rate. Variable RPM controllers are helpful to reduce harmonics.
- Heavy chatter is often a sign of tooling being above centerline.
- Chilled and ductile iron rolls are typically softer and short chipping materials. Even after running in the mill, these rolls rarely exceed a 67 Shore hardness.
- Tool steel and CPM rolls run quite similar and are normally over 100 Shore hardness. These rolls have a higher Chrome and Cobalt content and are considered a longer chipping material. The combination of the material type and hardness require a slower speed to run successfully.
- RCGX0907 & 1207 feed rate runs best at 0.15 mm/rev.

## Types, Applications and Features of Rolls

| Mill Rolls  | Applications  | Features  |
|---|---|---|
| Forged rolls <ul style="list-style-type: none"> <li>• Cr-Mo-based</li> <li>• High-speed-steel-based</li> <li>• Carbide-based</li> </ul>   | Bloom-milling at heavy rolling load.<br>Work rolls for rough cold rolling, and rolls for reinforcement. | Strong and relatively high in heat resistance.  |
| Cast iron rolls <ul style="list-style-type: none"> <li>• Carbide based</li> </ul>   | Semi-rolling or finishing that requires a very heavy load.  | More wear-resistant and high-heat-resistant than steel in between ordinary steel and cast-iron-based steel.                             |
| Cast Steel rolls <ul style="list-style-type: none"> <li>• Adamite roll for deep profile</li> <li>• Chilled roll for boards and wire steel process</li> <li>• Grain roll for steel finishing process boards (Resistant to thermal crack)</li> <li>• Ductile roll for boards, profile steel, and bar wire steel process (Rolls for roughing and finishing use)</li> <li>• Special cast iron roll</li> </ul> | Wide range of applications from bloom-milling and semi-rolling to finishing.                            | Suitable for the applications that require heat resistance and strength.<br>Suitable for the applications that require wear resistance. |
| Carbide rolls <ul style="list-style-type: none"> <li>• Pinch mills</li> <li>• Wire rod</li> <li>• Wire flattening or forming</li> <li>• ERW tube mills</li> <li>• Turks heads</li> <li>• Hot &amp; Cold rolls</li> <li>• Work reducing rolls</li> </ul>   |   | Preferred in abrasive operations.<br>High wear capabilities.  |

# Machining Poly-V Pulley Profiles

## Grooving With Ceramics

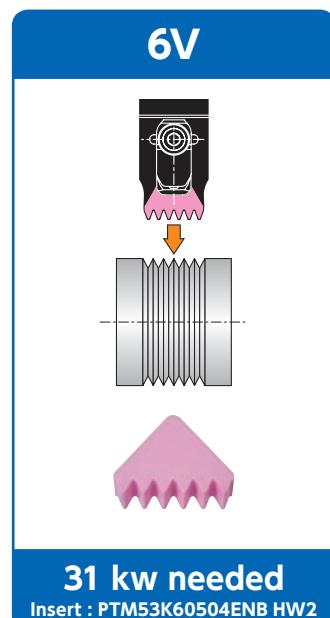

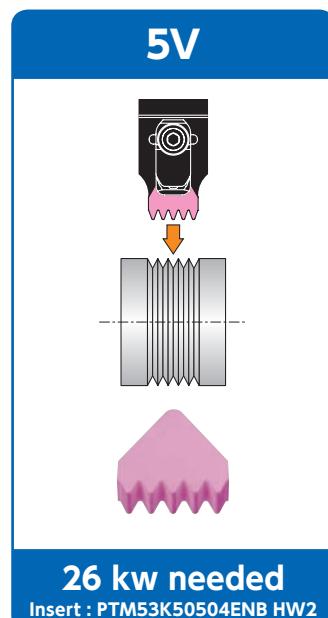

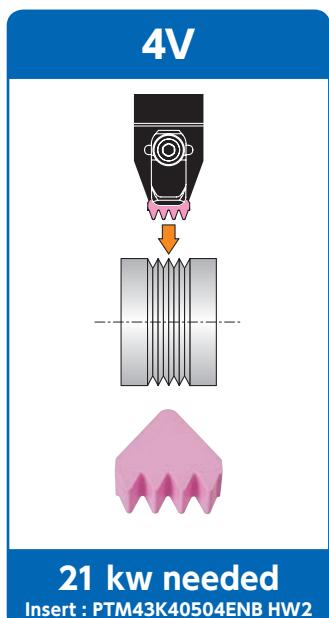

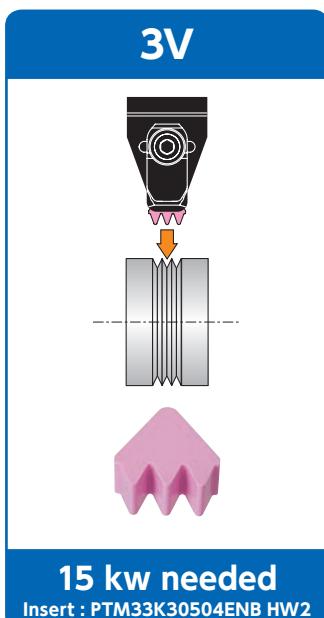

### Features

- High speed machining for Poly-V pulleys
- Up to 6-V grooving with single pass
- Precision inserts for plunging profiles

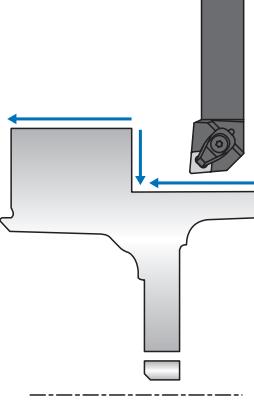

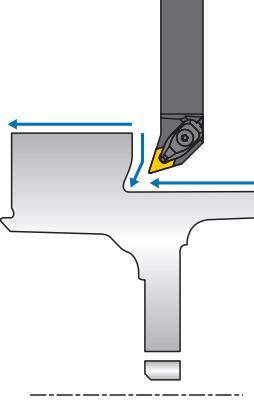

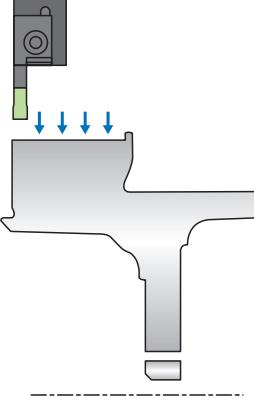

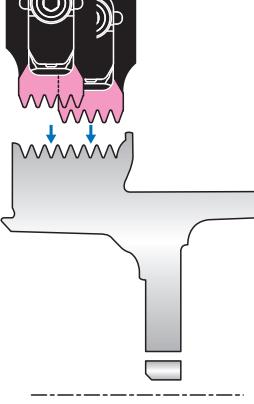

### Recommended Cutting Conditions

| Material       | Grade | Cutting speed (m/min) | Feed (mm/rev) | DRY | WET |
|----------------|-------|-----------------------|---------------|-----|-----|
| Gray cast iron | HW2   | 300-600               | 0.05-0.15     | ●   |     |

## High-Speed Pulley Machining Example using NTK Ceramic Tools

## ■ Field Result

| Tube scarfing   |                |
|---|----------------|
| Work material : SPHT4   |                |
| Cutting speed(m/min) = 70   |                |
| Depth of cut (mm) = 3.0   |                |
| Width of cutting (mm) = 5.0   |                |
| Cutting oil : DRY   |                |
| NTK : CX3   | 70 min./corner |
| Competitor's black ceramic grade  | 30 min./corner |
| CX3 exhibited a tool life more than double that of the competitor's black ceramic tool. |                |

# CERAMATIC / Solid Ceramic EndMill

## Features

- Extremely high speed machining for HRSA materials with our durable SiAlON grade "SX9"
- More than 15 times higher productivity than a Carbide end mill
- 4, 6 and 8 flutes are available
- Unique patent pending design provides toughness to the edge

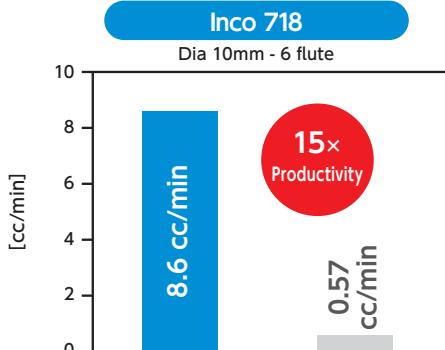

### RCE for HRSA materials ➔ M4

#### ● Ceramic specialist's design

##### Helix angle

- Designed for the purpose of:
  - 4-flute: toughness
  - 6-flute: less tool pressure and better chip evacuation
- SX9(SiAlON)
- Well balanced for toughness and wear resistance
- Bottom edge
- Flute
- Optimized for HRSA materials
- Excellent toughness

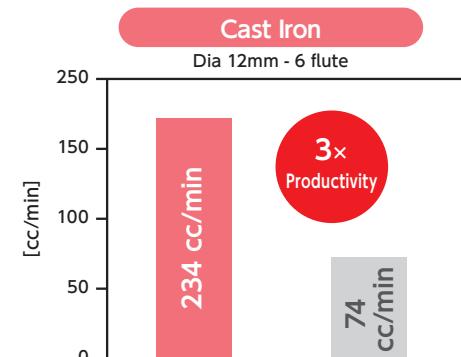

|                       | SX9  | Carbide |
|-----------------------|------|---------|
| Cutting Speed (m/min) | 600  | 40      |
| Feed (mm/t)           | 0.03 | ◀       |
| DOC (mm)              | 3.0  | ◀       |

### RCS for Cast iron / HRSA materials ➔ M5

##### Helix angle

- Designed for the purpose of:
  - 4-flute: toughness
  - 6/8-flute: less tool pressure and better chip evacuation
- Flute
- Three flute options up to 8 flute
- End Gash
- Edge
- Added chamfer provides toughness for cast iron machining

|                       | SX9  | Carbide |
|-----------------------|------|---------|
| Cutting Speed (m/min) | 700  | 110     |
| Feed (mm/t)           | 0.05 | ◀       |
| DOC (mm)              | 3.5  | 7.0     |

#### 4-flute

Slotting      Pocketing      Ramping

#### 6-flute

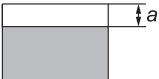

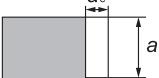

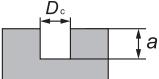

#### 8-flute

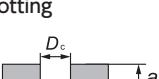

Face Milling      Side Milling  
Profiling      Ramping

## ● Recommend Cutting Conditions for HRSA material

| Application  | Grade | $\phi D_c$  | Flute | Cutting Speed (m/min) |     |      | Feed (mm/t) | Depth of cut $a_p$ (mm) | Width of cut $a_e$ (mm) | Coolant |  |
|--------------|-------|---|-------|-----------------------|-----|------|-------------|-------------------------|-------------------------|---------|--|
|              |       |   |       | 150                   | 600 | 1000 |             |                         |                         |         |  |
| Face Milling | SX9   | 3/8"  | 4/6/8 |                       |     |      | 0.03        | 1.4                     | —                       | DRY     |  |
|              |       | 1/2"  |       |                       |     |      |             | 1.9                     |                         |         |  |
|              |       | 5/8"  |       |                       |     |      |             | 2.4                     |                         |         |  |
|              |       | 3/4"  |       |                       |     |      |             | 2.9                     |                         |         |  |
|              |       | 8mm   |       |                       |     |      |             | 1.2                     |                         |         |  |
|              |       | 10mm  |       |                       |     |      |             | 1.5                     |                         |         |  |

## For Maximum Productivity

- A continuous cut is recommended. An interrupted cut may cause chipping or breakage.
- When using a Hydraulic or Shrink chuck, blow air to the arbor body, DON'T blow air to the endmill itself.
- A Minimum speed of 300m/min is required. (Don't run at lower speed.)
- A 1.5 degree ramping angle is recommended. Run at 50% lower feed rate when ramping cut.

### When cutting HRSA materials

- Continue to machine even if you see BUE, removing BUE may cause chipping or breakage to the edge.
- High speed machining work hardens the material. For this reason, leave at least 0.3mm of material for a finishing process.

# S-MILL / Solid Carbide Endmill

## Features

- The tools sharpness creates a remarkable finish on machined surface.
- 2, 3, and 4 flute designs with a selection of diameters to cover a variety of applications. (2 flute available in 2mm  $\phi$ )
- 40, 45, and 50mm lengths ideal for automatic lathes.

### Two style

### Three flute options

### Surface finish

|                                     | NTK (S-MILL) | Competitor A       | Competitor B |
|-------------------------------------|--------------|--------------------|--------------|
| Magnified work material (side face) |              |                    |              |
| Magnified work material             |              |                    |              |
| Excellent surface finish            |              | Bad surface finish |              |

Material: SUS304 ( $\phi$  16mm)  $\phi$  6mm -2 flute 3,000 rpm,  $F$ =300mm/min,  $a_p$ =3.0mm,  $a_e$ =1.2mm

### Field Result

| SUS416F (D-cut)<br>$\phi$ 6mm-2 flute |                             |
|---------------------------------------|-----------------------------|
| 3,200 rpm                             |                             |
| Feed : 140 mm/min                     |                             |
| DOC : 0.6 mm                          |                             |
| WET                                   |                             |
| NTK : S-MILL                          | 12,000 pcs/corner+ $\alpha$ |
| Competitor's solid endmill            | 10,000 pcs/corner           |

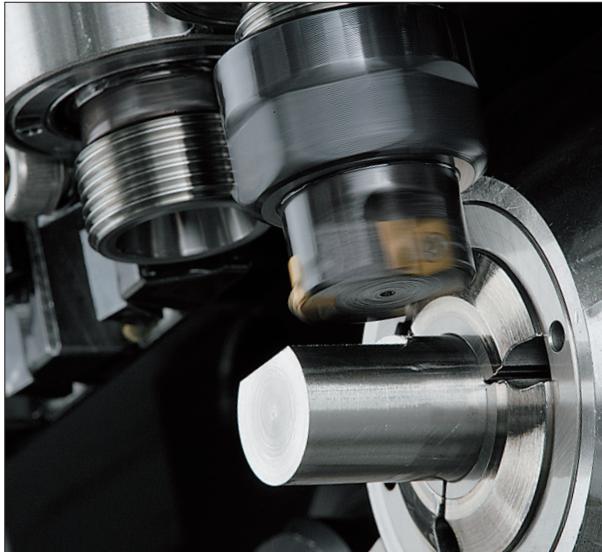

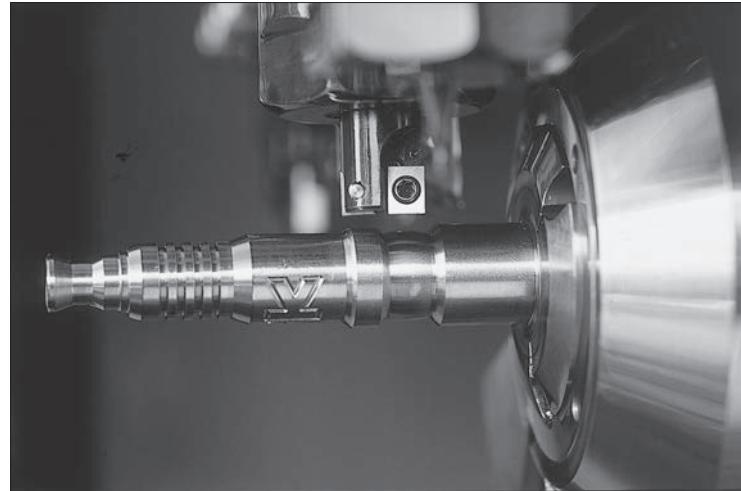

The competitor's end mill showed an obvious decrease in surface finish quality as it reached the end of its tool life. NTK's S-MILL maintained a quality surface finish throughout the extent of its longer tool life.

| S45C (AF 8mm HEX)<br>$\phi$ 6mm-2 flute |                         |
|---|-------------------------|
| 2,600 rpm                               |                         |
| Feed : 480 mm/min                       |                         |
| DOC : 1.0 mm                            |                         |
| WET                                     |                         |
| NTK : S-MILL                            | 70 pcs/corner+ $\alpha$ |
| Competitor's solid endmill              | 50 pcs/corner           |

The S-MILL sharpness reduces the occurrence of burrs and tool life is increased; clear improvements over the competitor's tool. The sharp cutting edge also produces noticeably less sound than the current tooling.

# Small Diameter Indexable Endmills

## Features

- Attach 20mm end mills in ER16 collet
- Just change inserts to index. No need to make any adjustments
- High quality surface finish, as low as 1um (Rz) when wiper inserts are used
- Corner radius as small as 0.05mm
- In addition to D cut, ramp machining can be performed\*

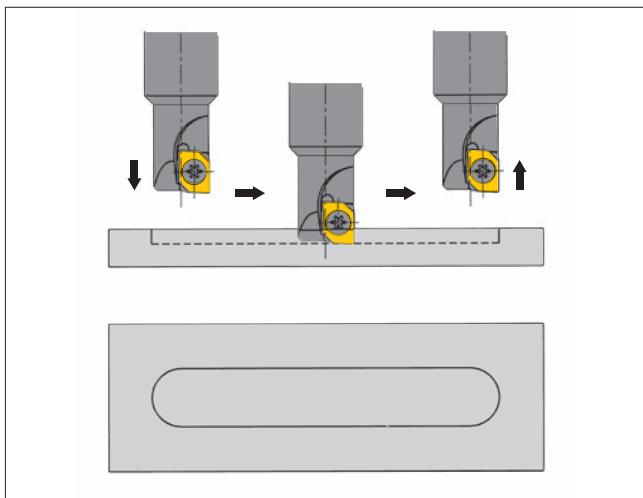

\*A combination of single-blade type endmills and inserts with center blade is required

## [Recommended Cutting Conditions]

| Work Material   | Speed (m/min) | Axial feed (mm/t) | Traverse feed (mm/t) | Depth of cut (mm) | Width of cut            |
|-----------------|---------------|-------------------|----------------------|-------------------|-------------------------|
| Steel           | 80 - 120      | ~0.03             | ~0.05                | ~3.0              | ~50% of cutter diameter |
| Stainless Steel | 40 - 60       | ~0.02             | ~0.04                | ~2.0              | ~50% of cutter diameter |

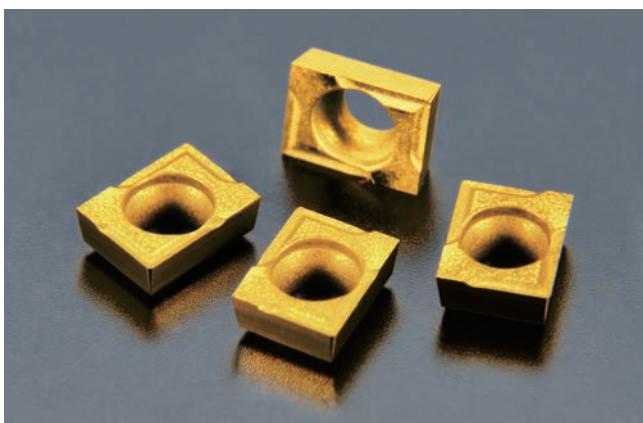

## Application Example

### Application Example-1

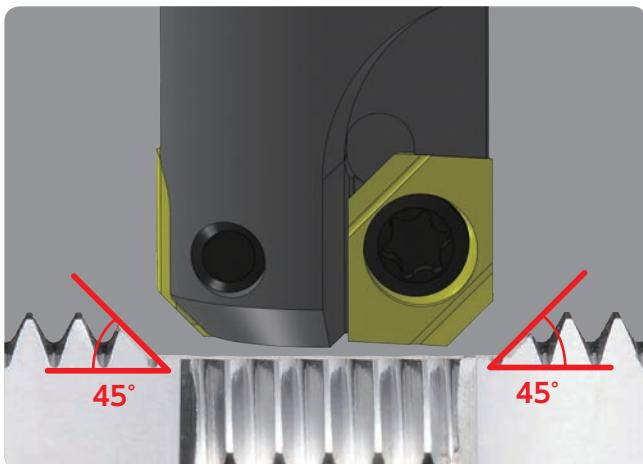

- A single tooth endmill equipped with a center cutting edge insert can be used for both plunge and side cut operations.

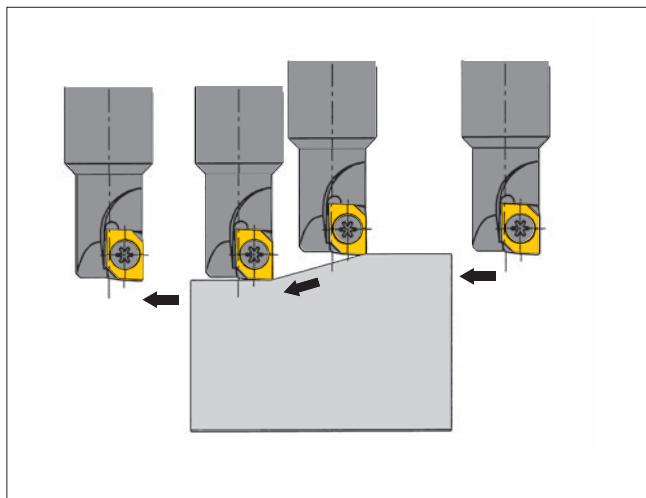

### Insert

45°

### Application Example-2

- A single tooth endmill equipped with a center cutting edge insert can be used for slope milling operations.

### Wiper

- Excellent surface finish obtained with new wiper insert

### Chipbreaker

- Less tool pressure with chipbreaker

### Chamfered surface finish insert

|                               |         |
|-------------------------------|---------|
| S45C                          |         |
| Speed : 95 m/min              |         |
| Feed : 0.14 mm/rev            |         |
| DOC : 1.0 mm                  |         |
| WET                           |         |
| NTK : QM3<br>C45 type         | 700 pcs |
| Competitor's<br>solid endmill | 500 pcs |

## Precaution for using REL type

When using the REL type end milling tool, tapering will occur on the side machined area of the work piece by the following amount:

| Depth of cut (mm) | Top face machining dia - Bottom face machining dia (mm) |  |
|-------------------|---|--|
| 2                 | 0.05  |  |
| 3                 | 0.08  |  |
| 4                 | 0.12  |  |
| 5                 | 0.15  |  |

# RCL type rectangular tooth chamfering type

## Features

- Cycle time can be reduced by using micro-grain carbide grade inserts. (Compared with the high-speed steel (HSS) end milling tools).
- Improved surface finish

### ① Cutter diameter and machining conditions

| Cutter diameter | Recommended module | Recommended feed rate |
|-----------------|--------------------|-----------------------|
| φ 14            | 2.25 or less       | 0.3mm /rev or less    |
| φ 12            | 2.15 or less       | 0.3mm /rev or less    |

If the recommended module or the recommended feed rate is exceeded, the clamping screw should be re-tightened at least once or twice a day to prevent loss of secure clamping.

## Precautions

- ① When mounting the end milling tool, ensure a minimum amount of overhang from the chuck to the tool nose in order to prevent run out during machining (Target value: approx. 20 mm)
- ② As is probably known, gear tooth chamfering applies shock loading due to interrupted cutting. For this reason, the holder and clamping screw may deteriorate quicker than normal. Therefore, we request that you replace the holder and clamping screw periodically with new ones for safer and more stable operation.
- ③ In addition, please re-tighten the clamping screw regularly to avoid loss of clamping force during machining.

### [Actual examples]

| Gear tooth chamfering on sleeve                  |           |
|--|-----------|

## | FU-HA (JWNXM)

Stable gray cast iron milling with lower cutting force

- Maximizes ceramic insert potential and can mill faster than 1,000m/min

**A.R. 5°  
R.R. 4° , 7° , 10°**

→ N4

## | FDX

- Extremely economical as SNGN1204 style inserts with 8 cutting edges can be used
- Capable of producing excellent surface finish, by utilising inserts with chipbreakers and wiper facets

**A.R.-6°  
R.R.-10°**

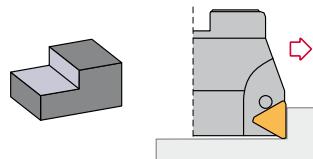

→ N6

\*NEW\*

## | TDX

- Economical & Multi-Functional
- TNGN 1604 style inserts with 6 cutting edges
- Low Cutting Force

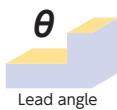

\*NEW\*

→ N7

## | HMC

- Hybrid Milling Cutter with adjustable inserts
- Finishing Cast Iron by using SX6 & B30
- Roughing Aluminum by using SX6 & PD1

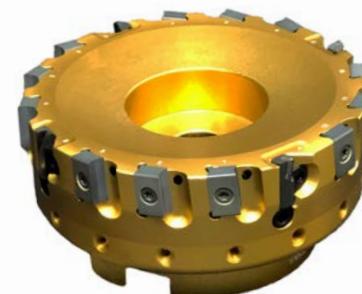

**A.R.-4°  
R.R.0°**

**θ : 88°**

\*NEW\*

→ N8

## | XTM

- Offers high efficiency machining due to the multi-blade design and possibility for greater depth of cut
- Offers a reduction in cutting force via our special chipbreaker design

**88°**  
Lead angle  
**A.R.-4°**  
**R.R.0°**

→ N9

## | QTE / QTS

- Ceramic milling cutter capable of shoulder milling now released
- Accommodates from φ20 up to φ250 cutters

$\theta : 90^\circ$   
Lead angle  
12.5 / 6.3

→ N10

→ N10

## | RNIW / RPIW

- Round insert Milling cutter for cast iron and for high-temperature resistant materials HRSA (Inconell, Rene, MAR, Waspelloy....)

→ N11

→ N12

\*NEW\*  
→ N13

## FU-HA Cutter (JWNXM)

- Stable gray cast iron milling with lower cutting force**

WATCH ON  
YouTube

- Maximizes ceramic insert potential and can mill faster than 1000m/min**

Thanks to lower cutting forces, work piece chipping is reduced  
Apply up to Ap 6mm

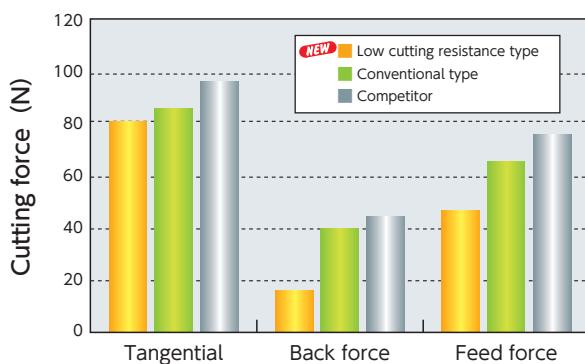

Available cutter dia.  $\phi 63$  -  $\phi 160$

Silicon Nitride grade is the best choice for roughing cast iron with scale. Tool pressure is reduced because of the sharper cutting edge and the ground-in chipbreaker

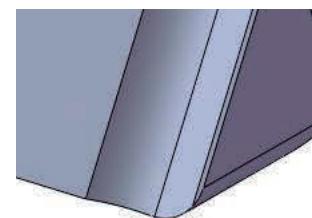

Very cost efficient with a unique 6 cutting edge design

Thanks to low-cutting resistance, machine over load is avoided

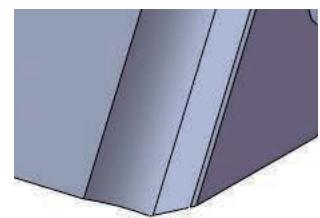

### Cutting condition

$V_c=800\text{m/min}$   $f_z=0.10\text{mm/t}$   $a_p=3.0\text{mm}$   $a_e=80.0\text{mm}$

[Radius type]

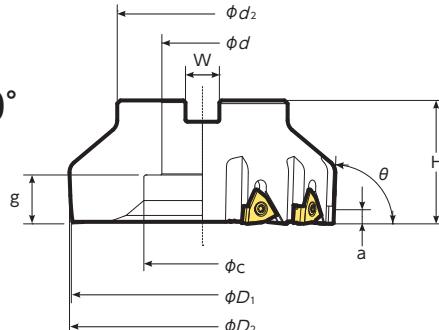

[Chamfered type]

Two edge preparation are available.  
Radius type good for high feed milling.  
Chamfered type with excellent edge sharpness.

Cycle time reduction with single pass and achieve longer tool life.  
Lesser machine horsepower required.

A. R. +5°  
R. R. +4°, +7°, +10°  
88°  
Lead angle

As for competitor's milling cutter, we needed to change inserts to new ones due to the wearprogress and lower clamping force of work material after machining 60 pcs.  
This was caused by increasing Cutting force.  
NTK NEW Milling cutter "FU-HA MILL" achieved 2 times longer competitor's.  
Low cutting force avoided the problem occurred by competitor's milling cutter.

## RNIW Cutter

### Characteristics:

Round negative insert cutter for slot milling, peripheral milling, ramp milling and drilling, pocket milling and copy milling.

It can be used in only one pass (roughing and finishing).

## More teeth=More productivity

- Easy to cut cycle time

## Adjustable edge height

Axial set screw

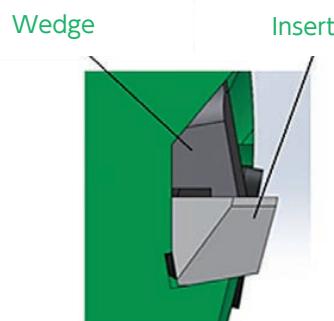

- Easy adjustment system for axial direction

## Light weight aluminum body

- A 25 HP machine can mount a φ 125 mm cutter

## Safety clamp mechanism

Wedge

Insert

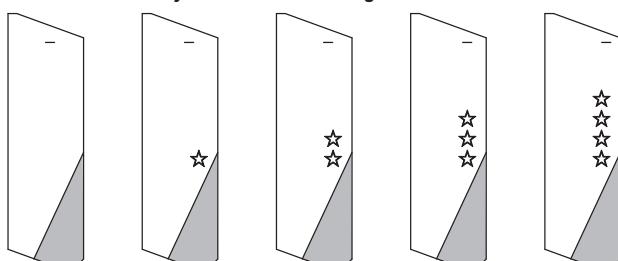

- Unique pocket prevents inserts from becoming dislodged

## NTK Regrinding Program

- Inserts can be reground up to (4\*) times.
- The diameter and height of the insert will change by .004" after each regrinding.
- The set of inserts placed back in to the cutter must have the same amount of stars indicating number of regrinding.

\*The number of regrinding per insert may vary depending on cutting Conditions.

Each insert will be marked with a star to indicate how many times it has been reground.

New

After 1st  
regrinding

After 2nd  
regrinding

After 3rd  
regrinding

After 4th  
regrinding

1 Send the inserts back to NTK Cutting Tools.  
Minimum order is 30 pcs.  
Note: Send always inserts with the same amount of regrinding stars.  
For orders greater than 50 pcs, NTK will manage the inserts in lots for regrinding process.

2 Delivery will be 6-8 weeks upon receiving your inserts.

3 The insert number will be changed to the following  
HFT802006C05 RPD1.

4 When installing NTK inserts into a cutter, please make sure that all the inserts have the same number of regrinding stars.

## Internal coolant supply

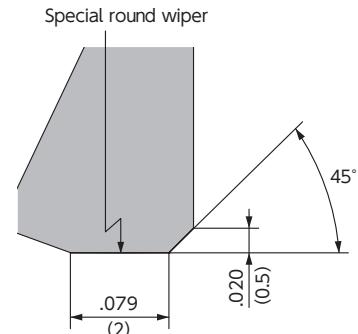

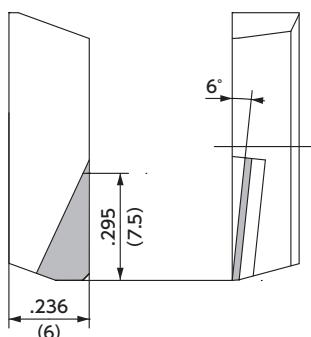

- Coolant through mounting bolt for better chip evacuation

## Produces outstanding surface finishes

- Unique cutting edge wiper produces excellent surface finishes

## Reduced cutting forces

- Sharp multi-faceted cutting edges reduce tool pressure

HFT802006C05 shown.

## High speed capability

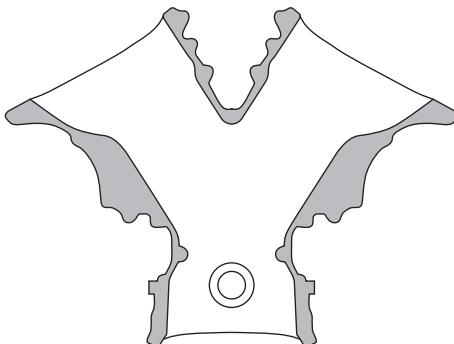

- Up to 20,000 rpm capability

## Less burrs

- A 45 degree chamfer on the insert reduces edge burrs

## Inserts can be reground up to 4 times

- Refer to back cover page for details

## Turning Tool Terminology

### Toolholder part names

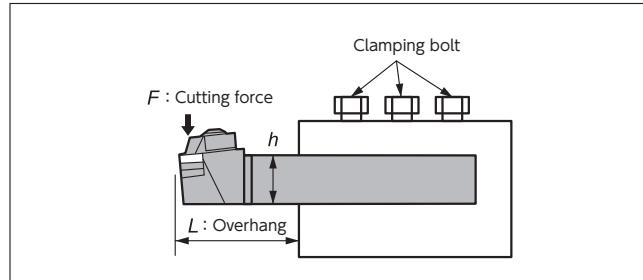

### Cutting Tool Parts

### Holder rigidity

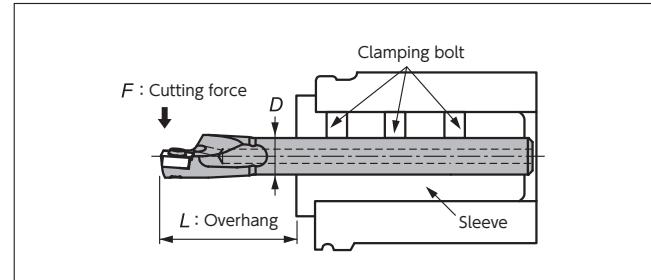

#### Toolholder deflection

$$\delta = \frac{4 \times F \times L^3}{E \times b \times h^3} = \frac{4 \times k_c \times f \times L^3}{E \times b \times h^3}$$

#### Boring bar deflection

$$\delta = \frac{64 \times F \times L^3}{3 \times E \times \pi \times D^4} = \frac{64 \times k_c \times a_p \times f \times L^3}{3 \times E \times \pi \times D^4}$$

| Symbol   | Term                   | Unit              |
|----------|------------------------|-------------------|
| $\delta$ | Deflection amount      | mm                |
| $b$      | Shank width            | mm                |
| $h$      | Shank height           | mm                |
| $E$      | Young's modulus        | N/mm <sup>2</sup> |
| $a_p$    | Depth of cut           | mm                |
| $f$      | Feed amount            | mm/rev            |
| $k_c$    | Specific cutting force | N/mm <sup>2</sup> |
| $L$      | Overhang               | mm                |
| $F$      | Cutting force          | N                 |

(  $F = k_c \times a_p \times f$  )

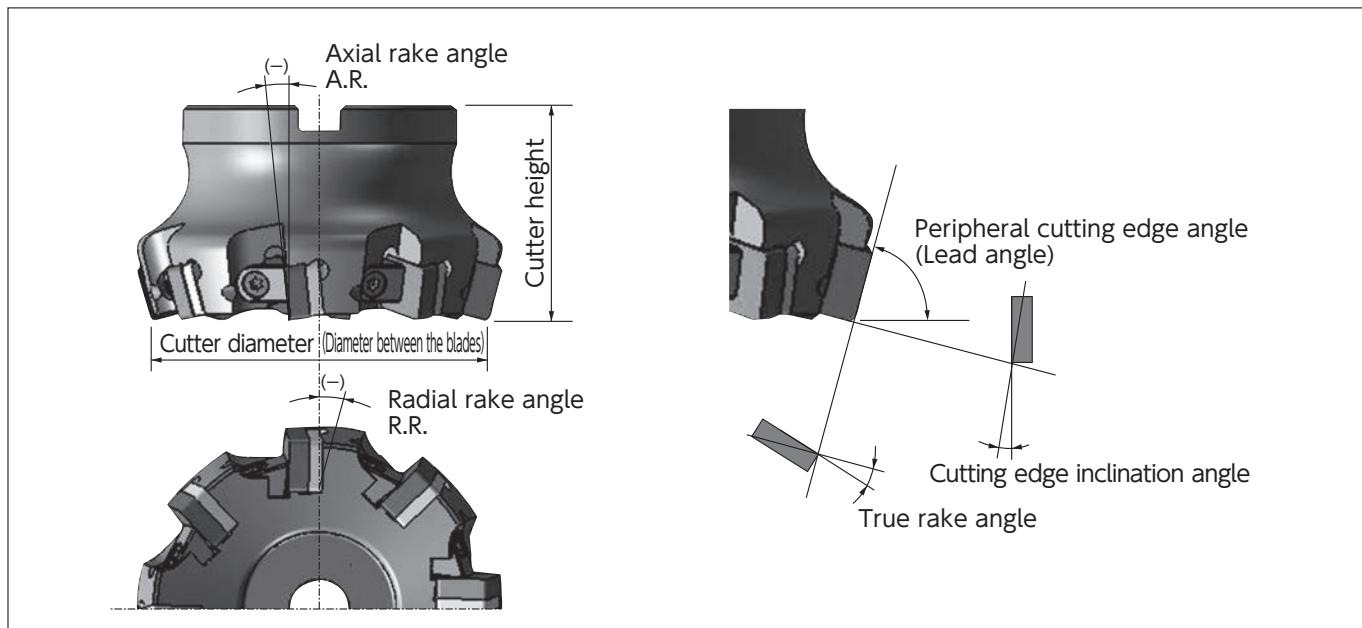

| Symbol   | Term                   | Unit              |
|----------|------------------------|-------------------|
| $\delta$ | Deflection amount      | mm                |
| $D$      | Shank width            | mm                |
| $E$      | Young's modulus        | N/mm <sup>2</sup> |
| $a_p$    | Depth of cut           | mm                |
| $f$      | Feed amount            | mm/rev            |
| $k_c$    | Specific cutting force | N/mm <sup>2</sup> |
| $L$      | Overhang               | mm                |
| $F$      | Cutting force          | N                 |

(  $F = k_c \times a_p \times f$  )

An important factor in improving the rigidity of a toolholder is to ensure the overhang of the tool shank is as short as possible.

## Milling Cutter Terminology

### Milling cutter terminology

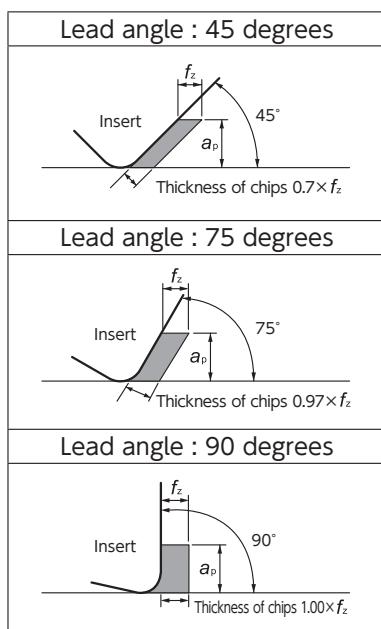

### Functions of each cutting edge angle

| Name                    | Function  | Effects  |
|-------------------------|---|--|
| Radial rake angle: R.R. | Controls the direction of chip evacuation and cutting force | Negative (-): Excels in chip control performance   |
| Axial rake angle: A.R.  | Controls the direction of chip evacuation and cutting force | Positive (+): Excels in cutting performance and BUE resistance   |
| Lead angle              | Controls the thickness and evacuation direction of chips    | Larger lead angles decrease the thickness of chips and relieves cutting load   |
| True rake angle         | Actual rake angle   | Larger angles excel in cutting performance and BUE resistance, but lower the cutting edge strength<br>Smaller angles increase the cutting edge strength but lower the BUE resistance |
| Cutting edge tilt angle | Controls the direction of chip evacuation                   | Larger angles excel in chip control performance and relieve cutting load, but lower the strength of the insert corner  |

### Functions of each angle

(Lead angle) : Relationship of this angle and chip thickness

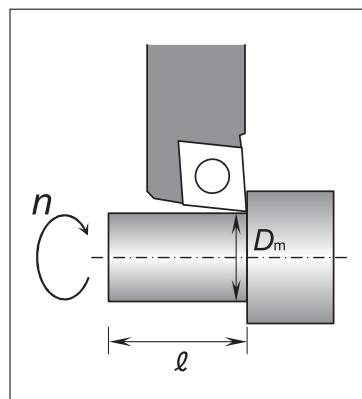

《Rake angle》: Combinations and characteristics

| Combinations of the angles for basic cutting edge shapes | (+)Axial rake angle : positive      | (-) Axial rake angle : negative     | (+)Axial rake angle : positive      |
|--|-------------------------------------|-------------------------------------|-------------------------------------|
|  | Radial/rake angle : positive<br>(+) | Radial/rake angle : negative<br>(-) | Radial/rake angle : negative<br>(-) |
| Double-positive cutting edge shape(DP edge shape)        |                                     |                                     |                                     |

## Calculation Formula for Turning

### Calculating the cutting speed

Calculating the cutting speed from the rotation speed

$$v_c = \frac{\pi \times D_m \times n}{1000} \quad (\text{m/min})$$

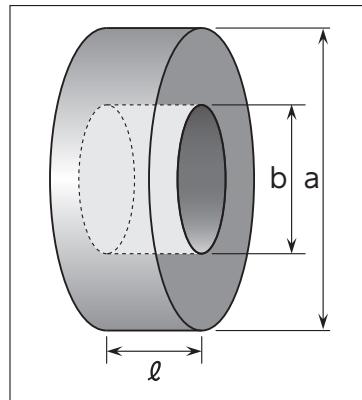

Calculating the revolution speed from the cutting speed

$$n = \frac{1000 \times v_c}{\pi \times D_m} \quad (\text{min}^{-1})$$

Example : Obtaining a cutting speed for machining a work piece of 200 mm diameter at the spindle speed of 1,000 min<sup>-1</sup>:

$$v_c = \frac{\pi \times 200 \times 1000}{1000} = 628 \text{ (m/min)}$$

### Calculating the cutting time

Calculating the cutting time for OD (ID) machining

$$T = \frac{l}{f \times n} \quad (\text{min})$$

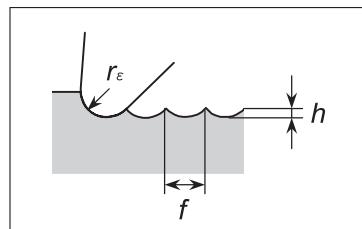

Calculating the cutting time for facing

$$T = \frac{\pi \times (a^2 - b^2)}{4000 \times v_c \times f} \quad (\text{min})$$

Example : Obtaining a cutting time for machining of work to be cut 100 mm long at the spindle speed of 1,000 min<sup>-1</sup> and at a feed rate of 0.1 mm/rev:

$$T = \frac{100}{0.1 \times 1000} = 1 \text{ (min)}$$

### Calculating the theoretical surface roughness

$$h = \frac{f^2}{8 r_e} \times 1000 \quad (\mu\text{m})$$

T : Cutting time (min)

l : Cutting length (mm)

f : Feed rate (mm/rev)

n : Spindle speed (min<sup>-1</sup>)

T : Cutting time (min)

v<sub>c</sub> : Cutting speed (m/min)

f : Feed amount (mm/rev)

π : Pi (3.14)

h : Theoretical surface roughness (μm)

f : Feed amount (mm/rev)

r<sub>e</sub> : Corner radius (mm)

Example : Obtaining the theoretical surface roughness when machining with an insert having 0.8 corner radius at a feed rate of 0.1 mm/rev:

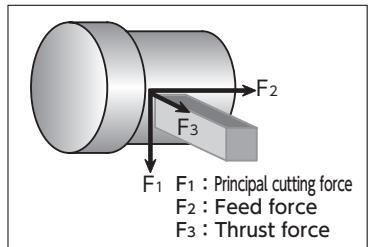

$$h = \frac{0.1^2}{8 \times 0.8} \times 1000 = 1.56 \text{ (μm)}$$

【Guidelines for actually finished surface roughness】

Steel type work: Theoretical surface roughness × 1.5 to 3

Cast iron type work: Theoretical surface roughness × 3 to 5

## ● Calculating the cutting force

$$F = k_c \times a_p \times f \quad (\text{N})$$

F : Cutting force (N)

$k_c$  : Specific cutting force (N/mm<sup>3</sup>) \*See the table below.

$a_p$  : Depth of cut (mm)

f : Feed amount (mm/rev)

Example : Calculating the cutting force for grey cast iron cut at the feed rate of 0.2 mm/rev and with a depth of cut of 3 mm:

$$F = 1800 \times 3 \times 0.2 = 1080 \text{ (N)}$$

## ● Calculating the power required

$$P_c = \frac{v_c \times f \times a_p \times k_c}{60 \times 10^3 \times \eta} \quad (\text{kW})$$

$P_c$  : Required power (kW)

$v_c$  : Cutting speed (m/min)

f : Feed amount (mm/rev)

$a_p$  : Depth of cut (mm)

$k_c$  : Specific cutting force (N/mm<sup>3</sup>) \*See the table below.

$\eta$  : Mechanical efficiency (0.7~0.8)

Example : Calculating the cutting power for the machining of grey cast iron at a cutting speed of 700 m/min, feed rate of 0.4 mm/rev, and with a depth of cut of 2 mm (with 0.8 set as the mechanical efficiency):

$$P_c = \frac{700 \times 0.4 \times 2 \times 1400}{60 \times 10^3 \times 0.8} = 16.33 \text{ (kW)}$$

## ● Specific cutting force

| Work material  | Tensile strength or hardness | Specific cutting force (N/mm <sup>3</sup> ) “ $k_c$ ” to cutting feed rate (mm/rev) |           |           |           |           |
|----------------|------------------------------|---|-----------|-----------|-----------|-----------|
|                |                              | 0.1mm/rev   | 0.2mm/rev | 0.3mm/rev | 0.4mm/rev | 0.6mm/rev |
| Soft steel     | 520                          | 3,610   | 3,100     | 2,720     | 2,500     | 2,280     |
| Medium steel   | 620                          | 3,080   | 2,700     | 2,570     | 2,450     | 2,300     |
| Hard steel     | 720                          | 4,500   | 3,600     | 6,250     | 2,950     | 2,640     |
| Tool steel     | SKD                          | 670   | 3,040     | 2,800     | 2,630     | 2,500     |

## ● Calculating the volume of chips produced

$$Q = v_c \times f \times a_p \quad (\text{cm}^3/\text{min})$$

Q : Volume of evacuated chips (cm<sup>3</sup>/min)

$v_c$  : Cutting speed (m/min)

$a_p$  : Depth of cut (mm)

f : Feed amount (mm /rev)

Example : Obtaining the volume of chips evacuated per minute for machining at a cutting speed of 700 m/min, feed of 0.4 mm/rev, and a depth of cut of 2mm

$$Q = 700 \times 0.4 \times 2 = 560 \text{ (cm}^3\text{/min)}$$

## Troubleshooting for Turning

| Type of problem             | Possible cause   | Corrective measures                        | Material/grade selection          |                                    |  |   | Cutting conditions |           |              | Tool shape |            |                           |                         | Machine/installation          |

## Calculation Formula for Milling Processes

### Calculating the cutting speed

Calculating the cutting speed from the rotation speed

$$v_c = \frac{\pi \times D_c \times n}{1000}$$

Calculating the revolution speed from the cutting speed

$$n = \frac{1000 \times v_c}{\pi \times D_c}$$

$v_c$  : Cutting speed (m/min)

$D_c$  : Cutter diameter (mm)

$n$  : Spindle speed (min<sup>-1</sup>)

$\pi$  : Pi (3.14)

Example : Obtaining the cutting speed for machining with an 200 mm diameter cutter at the Spindle speed of 1,000 min<sup>-1</sup>:

$$v_c = \frac{\pi \times 200 \times 1000}{1000} = 628 \text{ (m/min)}$$

### Calculating the feeding speed and feed rate

Calculating the feed rate per blade

$$f_z = \frac{v_f}{z \times n}$$

Calculating the feeding speed per minute

$$v_f = f_z \times z \times n$$

$f_z$  : Inch amount per tooth (mm/t)

$v_f$  : Table feed (mm/min)

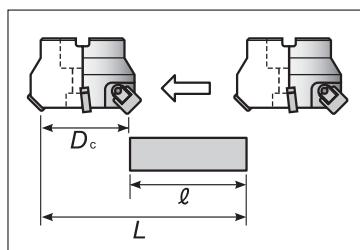

$z$  : Number of tooth

$n$  : Spindle speed (min<sup>-1</sup>)

Example : Obtaining the feed rate for milling with a 10-teeth cutter at the 0.2mm/t and the revolution speed of 1,000 min<sup>-1</sup>

$$v_f = 0.2 \times 10 \times 1000 = 2000 \text{ (mm/min)}$$

### Calculating the machining time

$$T = \frac{L}{v_f}$$

$T$  : Cutting time (min)

$L$  : Total length of table feed (mm)  
( $l + D_c$ )

$v_f$  : Table feed (mm/min)

Example : Obtaining the machining time for milling 200 mm on a work piece fed at the rate of 1000 (mm/min)

$$T = \frac{200}{1000} = 0.2 \text{ (min)}$$

## ● Calculating the cutting power

$$P_c = \frac{a_e \times a_p \times v_f \times k_c}{60 \times 10^6 \times \eta}$$

$P_c$  : Required power (kW)

$a_e$  : Cutting length (mm)

$a_p$  : Depth of cut (mm)

$v_f$  : Feed rate (mm/min)

$k_c$  : Specific cutting force (N/mm<sup>2</sup>) \*See the table below.

$\eta$  : Mechanical efficiency (0.7~0.8)

Example : Calculating the power required to machine gray cast iron for a length of 150 mm, at a feed rate of 1,100 mm/min, and with a depth of cut of 3 mm (with 0.8 set as the mechanical efficiency and 0.2 mm as the feed per tooth/blade)

$$P_c = \frac{150 \times 3 \times 1100 \times 1400}{60 \times 10^6 \times 0.8} = 14.44 \text{ (kW)}$$

## ● Specific cutting force

| Work material  |         | Tensile strength or hardness | Specific cutting force (N/mm <sup>2</sup> ) "k <sub>c</sub> " to cutting feed amount (mm/rev) |         |         |         |         |
|----------------|---------|------------------------------|---|---------|---------|---------|---------|
|                |         |                              | 0.1mm/t   | 0.2mm/t | 0.3mm/t | 0.4mm/t | 0.6mm/t |
| Soft steel     |         | 520                          | 2,200   | 1,950   | 1,820   | 1,700   | 1,580   |
| Medium steel   |         | 620                          | 1,980   | 1,800   | 1,730   | 1,600   | 1,570   |
| Hard steel     |         | 720                          | 2,520   | 2,200   | 2,040   | 1,850   | 1,740   |
| Tool steel     | SKD     | 670                          | 1,980   | 1,800   | 1,730   | 1,700   | 1,600   |
|                |         | 770                          | 2,030   | 2,030   | 1,800   | 1,750   | 1,700   |
| Cr-Mo steel    | SCM     | 600                          | 2,180   | 2,000   | 1,860   | 1,800   | 1,670   |
|                |         | 730                          | 2,540   | 2,250   | 2,140   | 2,000   | 1,800   |
| Alloy steel    | SNCM    | 900                          | 2,000   | 1,800   | 1,680   | 1,600   | 1,500   |
|                |         | HB350                        | 2,100   | 1,900   | 1,760   | 1,700   | 1,530   |
| Gray cast iron | FC      | HB200                        | 1,750   | 1,400   | 1,240   | 1,050   | 970     |
| Aluminum alloy | AC, ADC | 160                          | 580   | 480     | 400     | 350     | 320     |

\*For power required for NTK HCC, please refer to page P31.

## ● Calculating the volume of evacuated chips

$$Q = a_e \times a_p \times v_f$$

$Q$  : Volume of evacuated chips (cm<sup>3</sup>/min)

$a_e$  : Cutting length (mm)

$a_p$  : Depth of cut (mm)

$v_f$  : Feed rate (mm/min)

Example : Obtaining the volume of chips evacuated per minute for machining at a cutting speed of 700 m/min, feed rate of 0.4 mm/rev, and with a 2 mm depth of cut:

$$Q = 150 \times 3 \times 1100 = 495 \text{ (cm}^3\text{/min)}$$

## Troubleshooting for Milling

| Type of problem |                    | Possible cause                               |  | Corrective measures               |                                    | Material/grade selection | Cutting conditions   |   |  | Tool shape       |              |          |          |

### Theoretical surface roughness

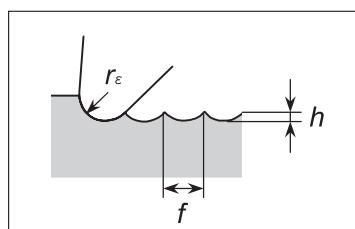

The theoretical surface roughness for lathe machining is the minimum value which can be obtained under the set machining conditions, and can be expressed by the following formula.

$$h = \frac{f^2}{8 r_e} \times 1000$$

*h* : Theoretical surface roughness (μm)

*f* : Feed amount (mm/rev)

*r<sub>e</sub>* : Nose radius (mm)

### Actual surface roughness

- When machining steel: Theoretical surface roughness x 1.5-3
- When machining cast iron: Theoretical surface roughness x 3-5

### Surface finish improvement measures

- Increase the nose radius.
- Use a wiper insert.
- Adjust the cutting speed and/or feed amount.
- Change the material and/or shape of the insert

### Relationship with triangle symbols

| Arithmetic average roughness <b>Ra</b> (μm) | Maximum height <b>Rz</b> (μm) | 10-point average roughness <b>Rz<sub>JIS</sub></b> (μm) | ※ (Triangle symbol) |
|---|-------------------------------|---|---------------------|

| 0.4   | 1.6                           | 1.6   |                     |
| 0.8   | 3.2                           | 3.2   |                     |
| 1.6   | 6.3                           | 6.3   |                     |
| 3.2   | 12.5                          | 12.5  |                     |
| 6.3   | 25                            | 25  |                     |
| 12.5  | 50                            | 50  |                     |
| 25  | 100                           | 100   |                     |

- Examples of reading

- (i) When **Ra** = 1.6 μm → 1.6 μm **Ra**
- (ii) When **Rz** = 6.3 μm → 6.3 μm **Rz**
- (iii) When **Rz<sub>JIS</sub>** = 6.3 μm → 6.3 μm **Rz<sub>JIS</sub>**

\*The finishing symbols (triangle symbol  and symbol ) are no longer used in JIS pursuant to the 1994 revision.

### Attention: When tightening screws

- Make sure the wrench tip and wrench hole are neither deformed nor stripped
- Engage the wrench straight to screw hole

- Do not apply more torque than the recommended amount (as shown to the right)

Note: Wrenches and bits come in a pack of five  
Clamp screws come in a pack of ten
